

An aerial photograph of a wide, winding river or stream flowing through a flat, open landscape. The water is a light, silty color, and the surrounding land is a mix of light and dark patches, possibly indicating different soil types or vegetation. The river meanders from the top left towards the bottom right of the frame. The overall scene is desolate and expansive.

Bataleon Winter 1819

THE FUTURE IS DIFFERENT

Bataleon Snowboards are different. While that may seem scary to some, more and more riders are joining the Triple Base Family as they discover the undeniable benefits of 3D shaping. As more riders experience this revelation, we begin to see other brands dipping their toes into the 3D shaping realm. The future is 3D, and we at Bataleon will continue to blaze the trail in 3D shaping techniques, leading the way, and drawing from our years of experience to produce better snowboards. No other brand is as committed to the future of snowboard shaping as we are.

In this catalog, you will find over 90% of our line is now upgraded to third generation 3BT™. Whether its your first Triple Base board, or you're looking to replace your trusty 3 year old Evil Twin, rest assured that your new Bataleon board represents the latest and best in 3D shaping technology, and is better than anything you have ever ridden. Built to our stringent production standards using the highest-grade materials possible, we are proud to offer you this collection and stand behind every board in it.

Ride different. Ride the future.

Triple Base Technology

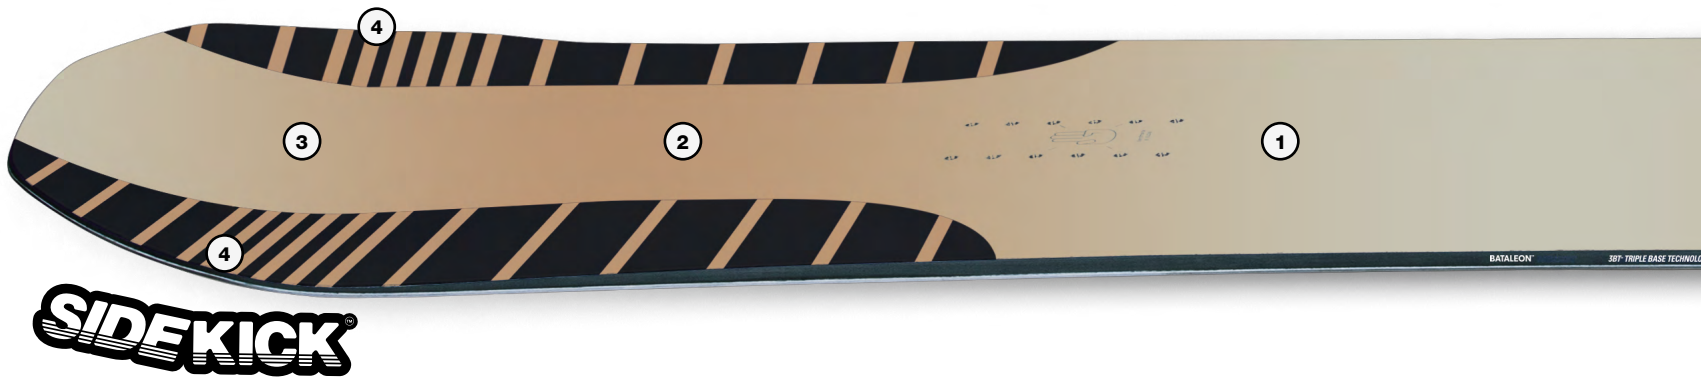

The Idea

THE IDEA

Created by nature or designed by man, the most successful designs take into consideration the forces they will be submitted to. When we were developing 3BT™ we analyzed how snowboards look when put under pressure. What happens when you drive it through a transition or jam it through a turn? Triple Base happens. Triple Base is the pre-shaped form of a board in motion, and just like the wings of a plane or the hull of a boat is curved to perform, your snowboard should also be shaped for its environment.

THE SHAPE

After lots of research, analyzing, tinkering, and testing, we came up with our patented 3BT™ shaping technique. All our boards feature tip to tail positive camber in combination with lifted contact points at the widest parts of the board. Over the years we perfected 3BT™ to best perform for every kind of riding by fine tuning the synergies between the flat base, side bases, radii and camber.

1

1. Stable Centerbase

There is no base uplift under or between the bindings. This creates a stable area of control underfoot.

2

2. Uplift Bindings To Widest Point

Sidebase uplift gradually increases outside of the bindings to the contact points. The gradual rise creates smooth transition zones for turning and buttering, and the raised contact points makes the board less susceptible to edge catch.

3

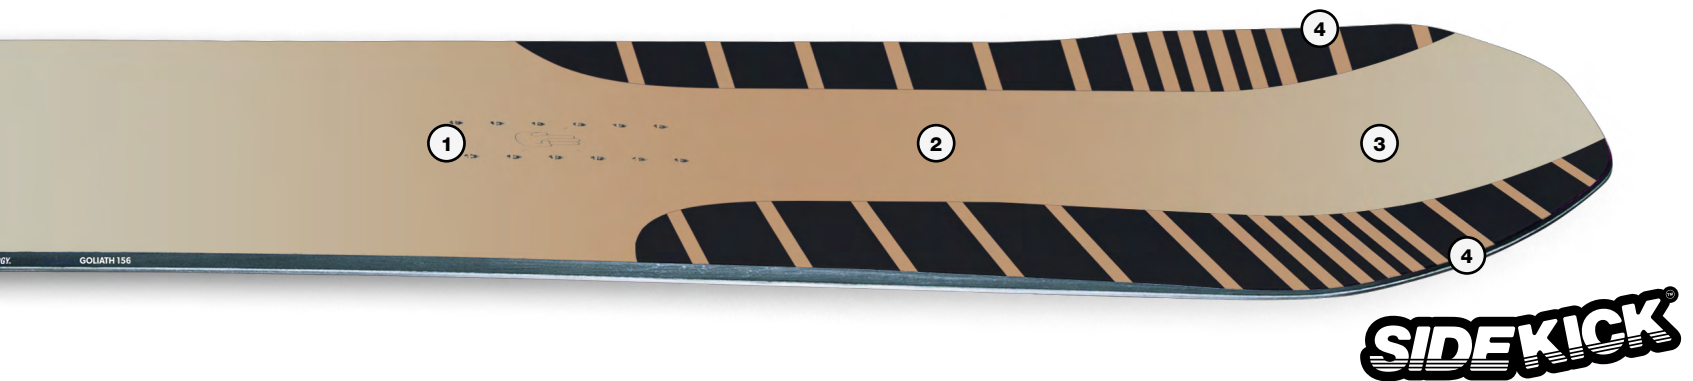

3. Maximum Uplift

The amount of base uplift reaches its maximum at the widest part of the board creating a planing surface that cuts through rough terrain and improves float in powder.

Triple Base Tech

84
3BT™

4

4. SideKick

SideKick dramatically increases the sidebase uplift just outside the widest points of the nose and tail. This makes turn initiation smoother, increases float in powder and improves handling of the board in rough terrain.

Triple Base Technology Advantages

HOW IT WORKS

Tip to tail positive camber makes the boards snappy and responsive. The turned up side bases make the board fast, playful and forgiving when riding flat based. The three dimensional shaping also makes for smoother and quicker turn initiation with less effort. The beauty of this shape lies in the fact that when you ride flat, it tracks straight and fast and when you are on edge you have full engagement with smooth radii. The boards are loose and fun when you want but the total edge engagement is always there when you need it.

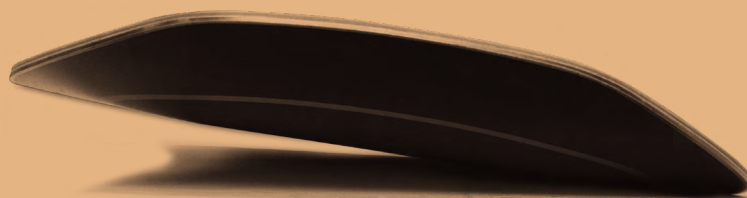

WHY IT WORKS

We are entering a new era in snowboard shaping. After the camber vs rocker wars and the crazy shape revolution there is still one shape standing. Triple Base was invented long before rocker, yet it's still here as other designs begin to fade from the industry. More and more board shapers are turning to 3D shaping, but we have the most experience with this process. Our patented 3BT™ shape works because it's three separate flat base areas in combination with positive camber and smooth radii. The key detail is in the uplift and how its raised and bent. We continue to explore the boundless possibilities evolving from the original idea of making a better 3D shaped snowboard.

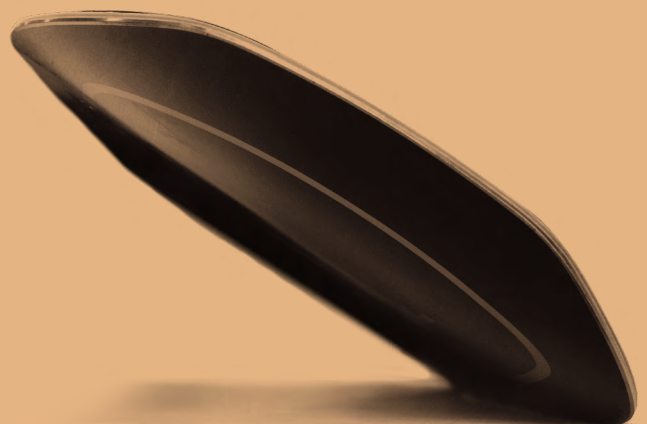

Flat Base Riding

When riding flat-based only the centerbase section is on the snow so the board travels fast and straight with no hooky movement or edge catch.

Turn Initiation

With a tiny amount of pressure and angle, the sidebases start to engage near the bindings, but the pressure remains constant along the contact edge.

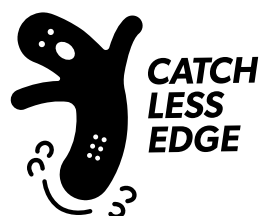

On Edge

When on edge the 3D shaped sidecut forms a complete arc with the snow, offering unparalleled and powerful edge hold.

Triple Base Tech

Edges create friction, hold heat and don't hold wax—all of which slow you down. 3BT™ boards accelerate faster and maintain speed when pointed straight because the lifted sidebases have a shorter overall edge contact and reduce drag. This helps you coast along cat tracks faster, clear jumps and pass skiers on powder days.

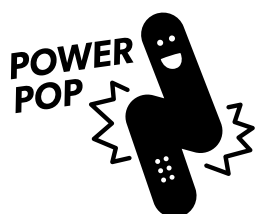

The uplifted edges at the contact points reduces the chance of edge catch. The sidebase lift at the contact points disperses pressure evenly along the edge, therefore allowing for a smoother, more controlled ride. This also makes the tips more forgiving for butters and more lenient on less-than-perfect landings.

When laid on edge, the uplifted edge and base sections form a more cohesive arc and contact with the snow surface. A smooth and secure arc means more powerful turns. As the board is rolled side to side, the edge uplift offers a more fluid transition from edge to edge. This makes slower turns easier, faster turns more solid, and carving full circles on corduroy more complete.

The 3BT™ tips and contact points are less likely to dig and catch on landings. Reduced edge bite at the tips allows the board to automatically track back to going straight, meaning you can ride away from not-so-perfect landings.

The shaped tips boost the pop power of positive camber. When the tail (or nose) is flexed and compressed for an ollie the forces are directed towards the centerbase of the tail (or nose) and amplified. This gives added spring to the board's powerful camber backbone.

The hull-like tip shape has inherent floating, planing and plowing properties similar to a boat or progressive surfboard shape. The shape allows the front to rise out of soft snow, and while making it easier to sink the tail, offering a more comfortable riding position in deep snow.

The beveled tips have less drag and generate a smoother glide up and down transitions while still maintaining control. This means faster, smoother and more predictable takeoffs and landings.

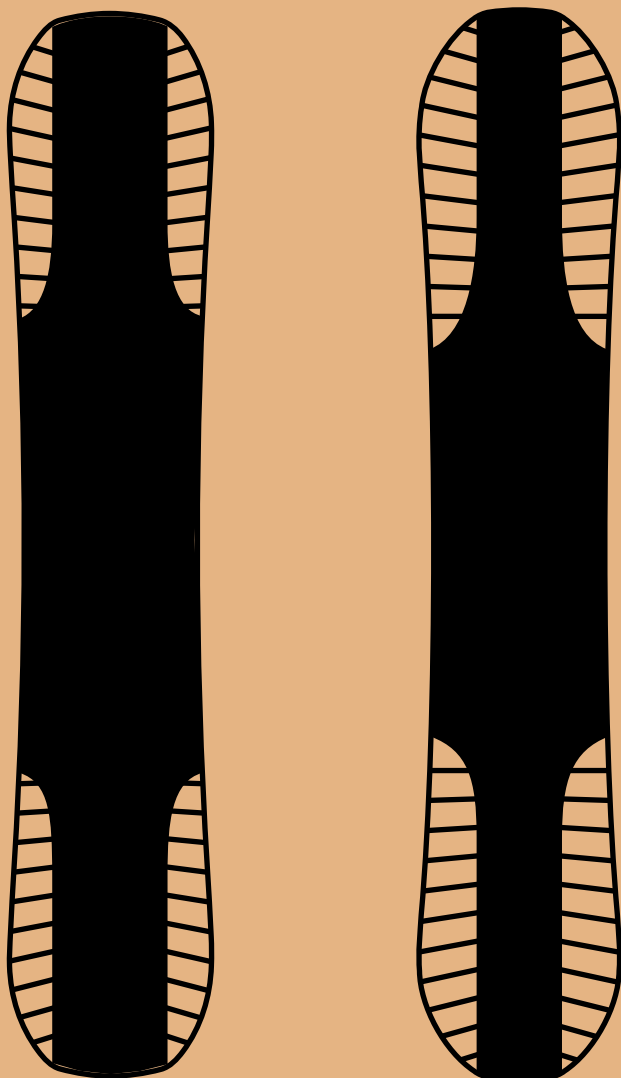

3BT™ shaping gives every board universal benefits. The hull-like shape of a jib board will still float better than a flat one in pow. All our boards profit from the increased edge hold of uplifted edges.

Triple Base Technology

Flavors

2nd Gen Triple base

JIB 3BT™

Shaped with a wide centerbase and the shortest section of sidebase uplift in our line. The uplift angle is low and begins outside the bindings for precision control with less hang-ups. The wide centerbase offers a stable platform to press, load up ollies and put down landings. Perfect for urban, jib and park driven

Featured on:

Blow

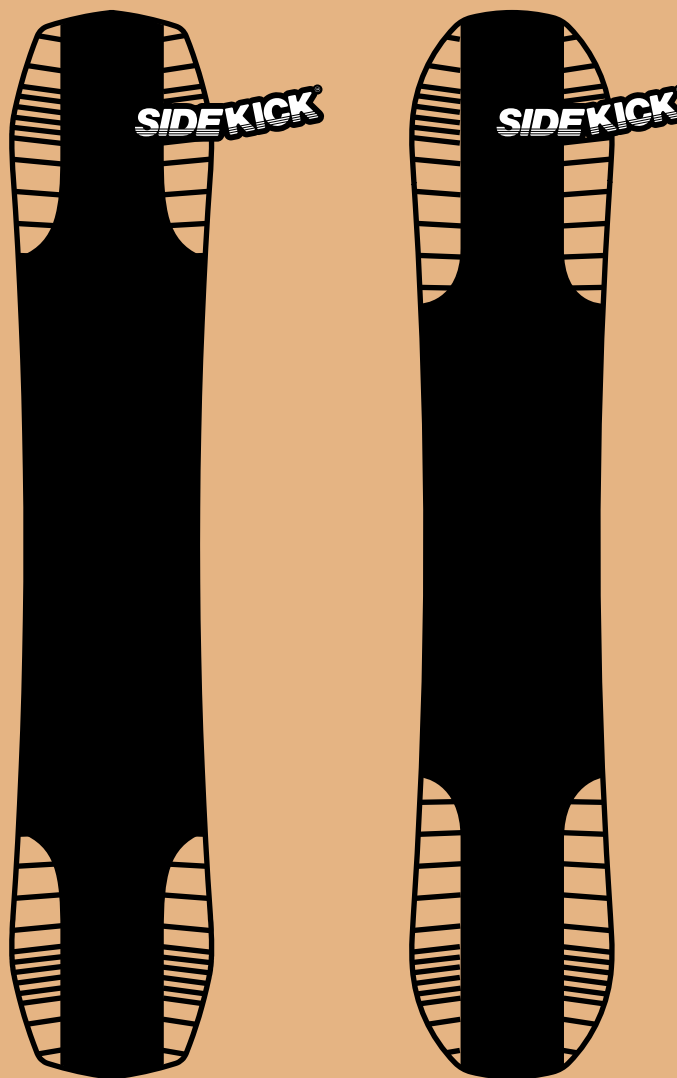

FREESTYLE 3BT™

The sidebase and centerbase are equally proportionate in size and the sidebase has a medium uplift angle. The twin shape has 1cm added to the nose and features long edge contact length between the feet. This shape is the most versatile and capable in the line and has a powerful and reactive ride with freestyle tendencies and powder float.

Featured on:

Chaser
Spirit

3rd Gen Triple base

JIB 3BT™

3rd Generation JIB 3BT™ featuring SideKick™ is tuned with a wide centerbase and the shortest section of sidebase uplift in our line. The uplift angle is low and begins outside the bindings for precision control with less hang-ups. The wide centerbase offers a stable platform to press, load up ollies and put down landings. Perfect for urban, jib and park driven riders.

Featured on:

Disaster
Wallie
G.W.

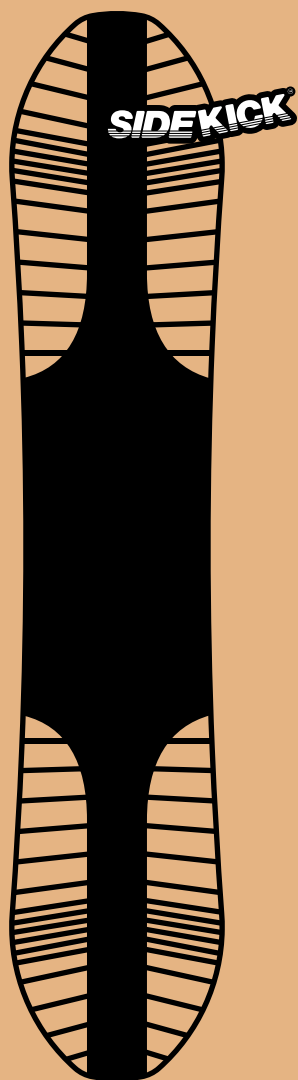

TWIN 3BT™

3rd generation TWIN 3BT™ has the added benefit of SideKick. The base uplift angle is mellow becoming more dramatic at the widest areas of the board. It offers a loose jib feel while the wide centerbase makes it stable on takeoffs, landings, in presses and at high speeds. Designed for terrain parks and overall freestyle riding.

Triple Base Tech

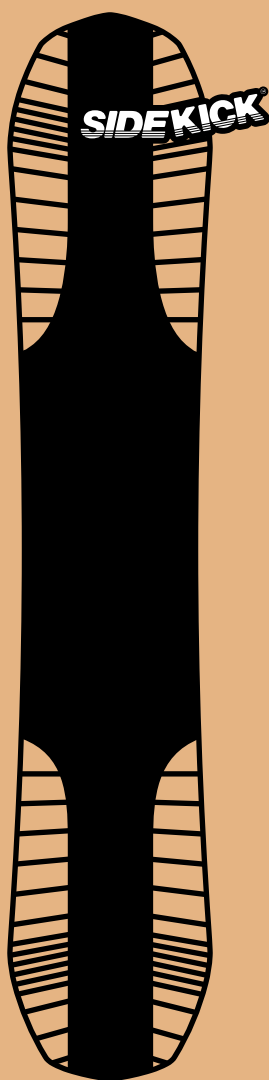

TWIN POW 3BT™

A freestyle powder shape with a narrow centerbase and exaggerated symmetrical tip and tail sidebase uplift featuring SideKick. The dramatic uplift and wide surface area of TWIN POW 3BT™ offers incredible float in pow and fun, loose riding characteristics.

Featured on:

Magic Carpet

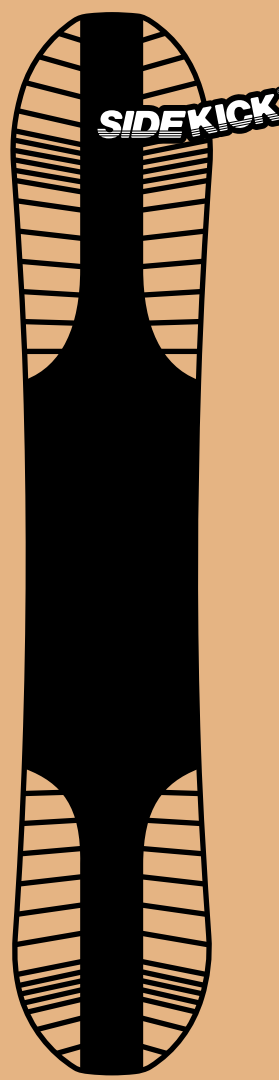

FREESTYLE 3BT™

3rd generation FREESTYLE 3BT™ has the added benefit of SideKick. The sidebase and centerbase are proportional in width. The sidebase starts with a medium uplift angle and dramatically increases at the widest point of the board. This shape is the most versatile in the line and offers a powerful and reactive ride with freestyle tendencies and powder float.

Featured on:

The Jam
Stallion

Feel Better
Push Up

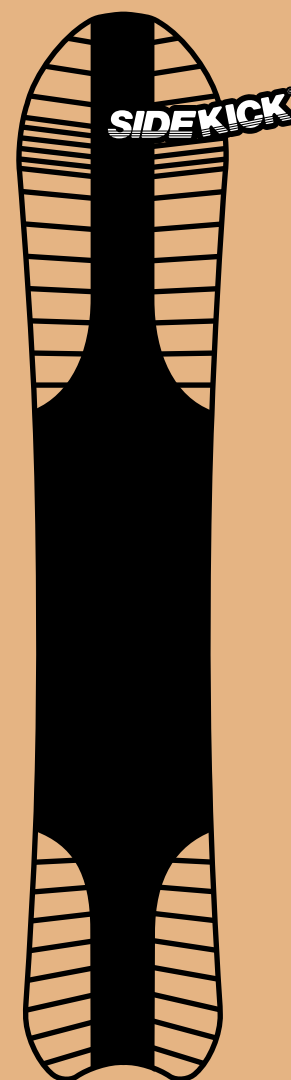

FREERIDE 3BT™

FREERIDE 3BT™ with SideKick has a narrow centerbase with more sidebase uplift area and angle in the nose than in the tail. The tapered shape, sidecut and setback stance are optimized for backseat steering, high-speed traction and maximum powder float while the narrow centerbase generates swift edge-to-edge transfer and powerful carves.

Featured on:

The One
Omni

Storm
Carver

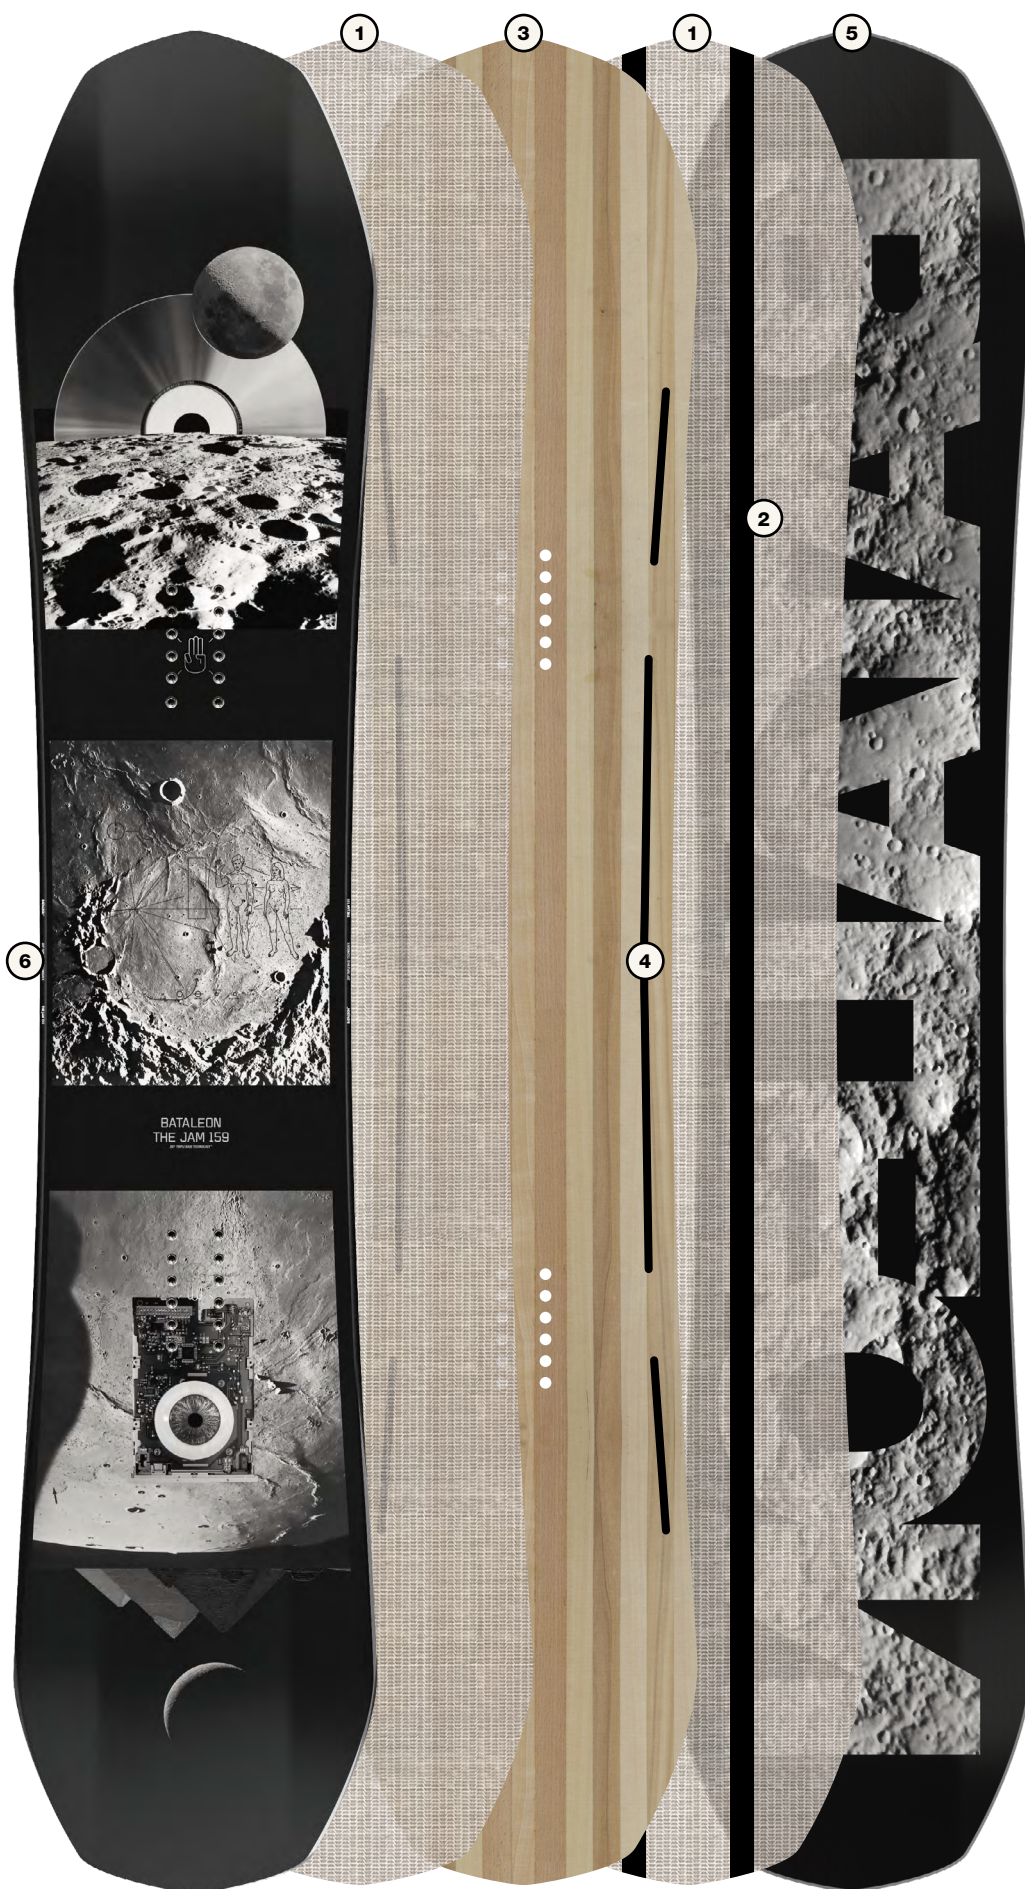

POW 3BT™

3rd generation POW 3BT™ is designed with a narrow centerbase and maximum uplift with SideKick in the nose. The SideKick offers uplift while turning in powder unlike other brand's boards. This shape, with its large nose is designed to stay afloat on the deepest of days with ease.

GLASSING

The type and placement of fiberglass greatly influences a board's flex and riding characteristics. Boards are built with a layer of fiberglass atop and below the core. We use a combination of two main types of fiberglass: biaxial and triaxial. Biaxial fiberglass has fibers running every 90 degrees. Triaxial fiberglass has fibers running every 45 degrees.

Our three-way weave of fiberglass is light, strong and responsive. We use this to beef up the flex pattern.

Our traditional and time tested two-way weave of fiberglass is light, strong and responsive keeping the board snappy without adding torsional stiffness.

Fully Featured

2

SPECIAL LAYUPS

We use additional materials to improve specific riding traits of our boards. Carbon stringers can make a significant difference in how a board performs. By positioning strips of carbon fiber we can fine-tune the flex, pop, edge hold, response, dampening and add an extra layer of awesomeness to your ride.

Carbon is feather light and adds explosive pop, precise edge control, reactive response and smooth dampening to a board. It is used in different ways to fine-tune a board's ride characteristics.

6

SIDEWALL TECH

Sidewalls need to be tough while not disrupting our carefully fine-tuned flex patterns

We use tried and trusted ABS sidewalls for most of the collection. For the best flex to strength ratio.

New for the 1819 collection are urethane infused sidewalls. They smooth out your ride and are more resistant to impact.

3

WOODCORE

The wood core is the soul of the board. The type of wood, the grain orientation, and the overall thickness and shaping greatly determines the way it rides. We source a number of high quality woods to create our wood cores.

Our lightest 70-30 Swiss paulownia and poplar wood blend for the lightest strength to weight ratio.

Our 50-50 Swiss paulownia and poplar woods blend for optimal strength to weight properties.

Full poplar with beech hardwood laid tip to tail along the inserts strengthening the board's backbone, reinforcing the inserts and producing more pop.

4

SUPER TUBES

New for the 1819 collection are hollow carbon core upgrades that we insert into the core in 3 different configurations. The hollow carbon tubes greatly increase the woodcore's pop and reduce weight.

Our Dual Radial Super Tubes woodcore upgrade features six hollow carbon core inserts parallel to the board radius for extra power transfer to the edge.

Our Dual Super Tubes woodcore upgrade has two hollow carbon rods milled into the bottom of the core to enhance pop and give the camber more snap.

Our Central Super Tube woodcore upgrade has one centrally placed hollow carbon rod milled into the bottom of the core to enhance pop without stiffening the board torsionally.

5

BASE TECH

The base is important as it's your direct connection to the snow. Bataleon boards are built with two varying types of extruded and sintered bases fine tuned for different conditions and riding styles. All our boards are finished with a factory wax before they leave the factory.

The fastest base money can buy. This base is produced with the ISO-SPORT 7000 black racing series and is what spandex-clad dudes have on their ski boards. No joke.

Maximum molecular content for a hardened sintered base that hauls ass. More molecules mean a denser base that can take a beating using ISO-SPORT 7000 series as backbone.

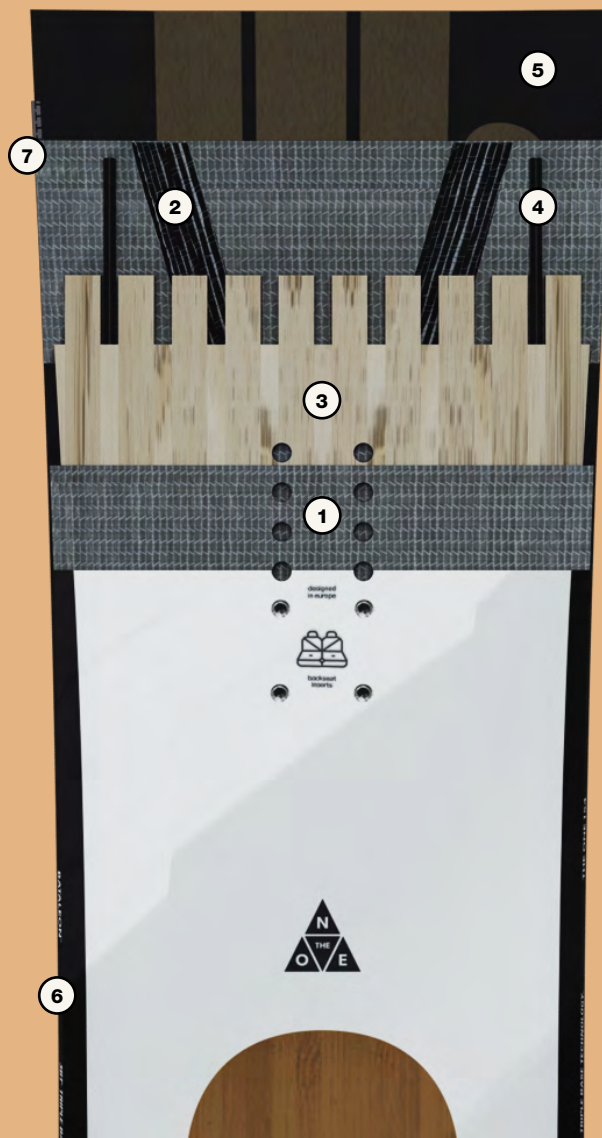

Our standard sintered base that's tough and fast, and faster when waxed.

Not a basic extruded base. It has the highest molecular content available for an extruded base. That means it's super slick, durable and maintenance-free.

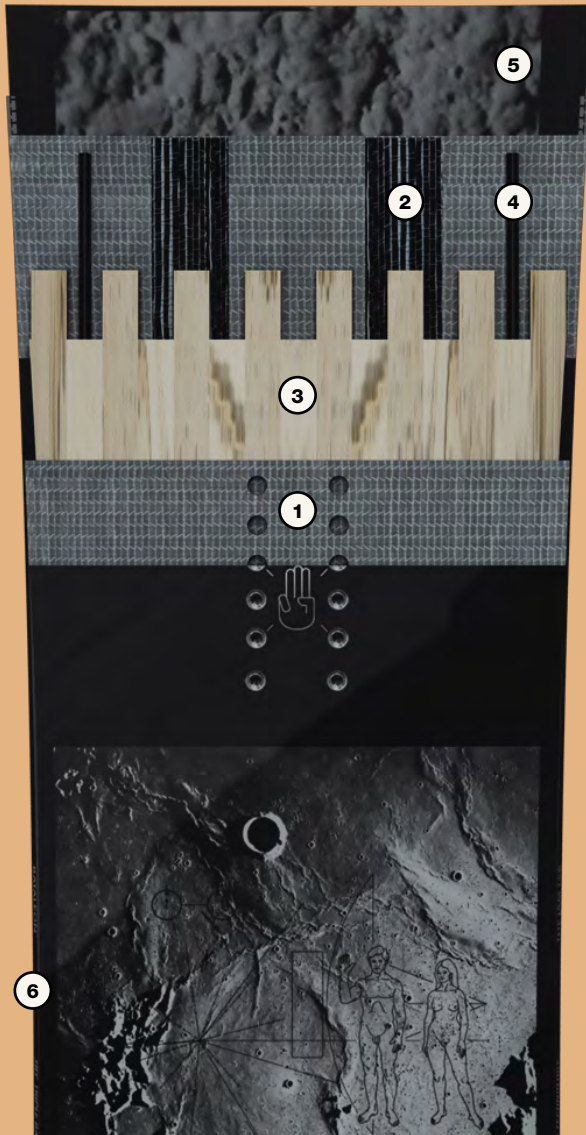

Features Tech Talk

In addition to our patented 3D shapes, Bataleon boards are built with advanced construction techniques specific to each board's desired riding characteristics. Our tip to tail woodcores (3.) have been upgraded with integrated hollow carbon tubes (4.) making our cores lighter and more dynamic.

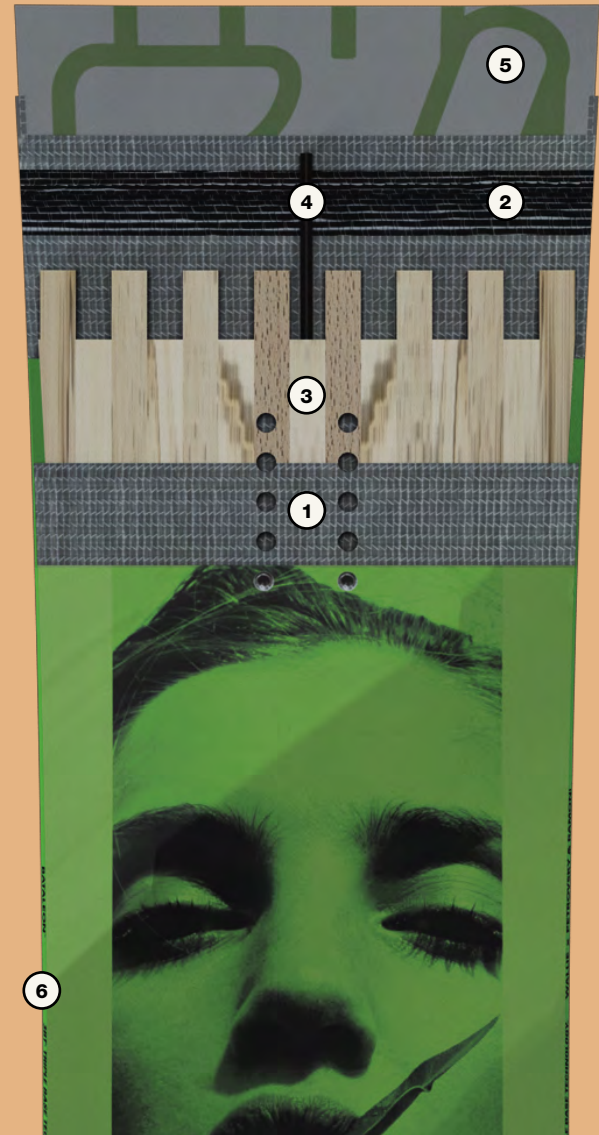

THE ONE - D.R.S.T. CONSTRUCTION

The One represents the pinnacle of snowboard construction. It's built with the Ultra Light Core (3.), which is 70% light paulownia, 30% solid poplar. This core is Dual Radial Carbon Enhanced, meaning it has six hollow carbon tubes (4.) milled into the underside of the woodcore parallel to the radius of the board. This core enhancement not only reduces weight, it also helps deliver extra power to your edges. The Ultra Light core is sandwiched between two sheets of tri axe fiberglass (1.). The fibers are woven at 90 and 45 degrees creating a board that is torsionally very responsive. We enhance the torsional response even more by placing extra V shaped carbon strips (2.) in the nose and tail under the core for a direct power transfer from the binding area out. The tail strips are placed in a slightly tighter V to give The One increased pop. We finish off with an ISOSPORT Nano Highspeed Base (5.), the hardest and fastest base available. The whole package is held together with ultra durable ABS sidewalls (6.) and German steel edges (7.) with increased inner tang size for improved impact resistance.

THE JAM - D.S.T. CONSTRUCTION

The Jam is built around the Light Core (3.) with equal measures lightweight paulownia and solid poplar wood creating an unbeatable blend of durability and weight. The core is Dual Carbon Enhanced with two straight hollow carbon tubes milled into the underside of the woodcore. These carbon tubes reinforce the camber profile and add snap to the core making the board poppy and highly responsive. The Light Core is sandwiched between two sheets of tri axe fiberglass (1). The fibers are woven at 90 and 45 degrees creating a board that is torsionally very responsive. We run two carbon strips tip to tail (2.) under the core to enhance pop. The Jam has the Ultra Glide S base (5.), one of the highest grades sintered bases from ISOSPORT. The whole package is held together with ultra durable ABS sidewalls (6.) and German steel edges (7.) with increased inner tang size for improved impact resistance.

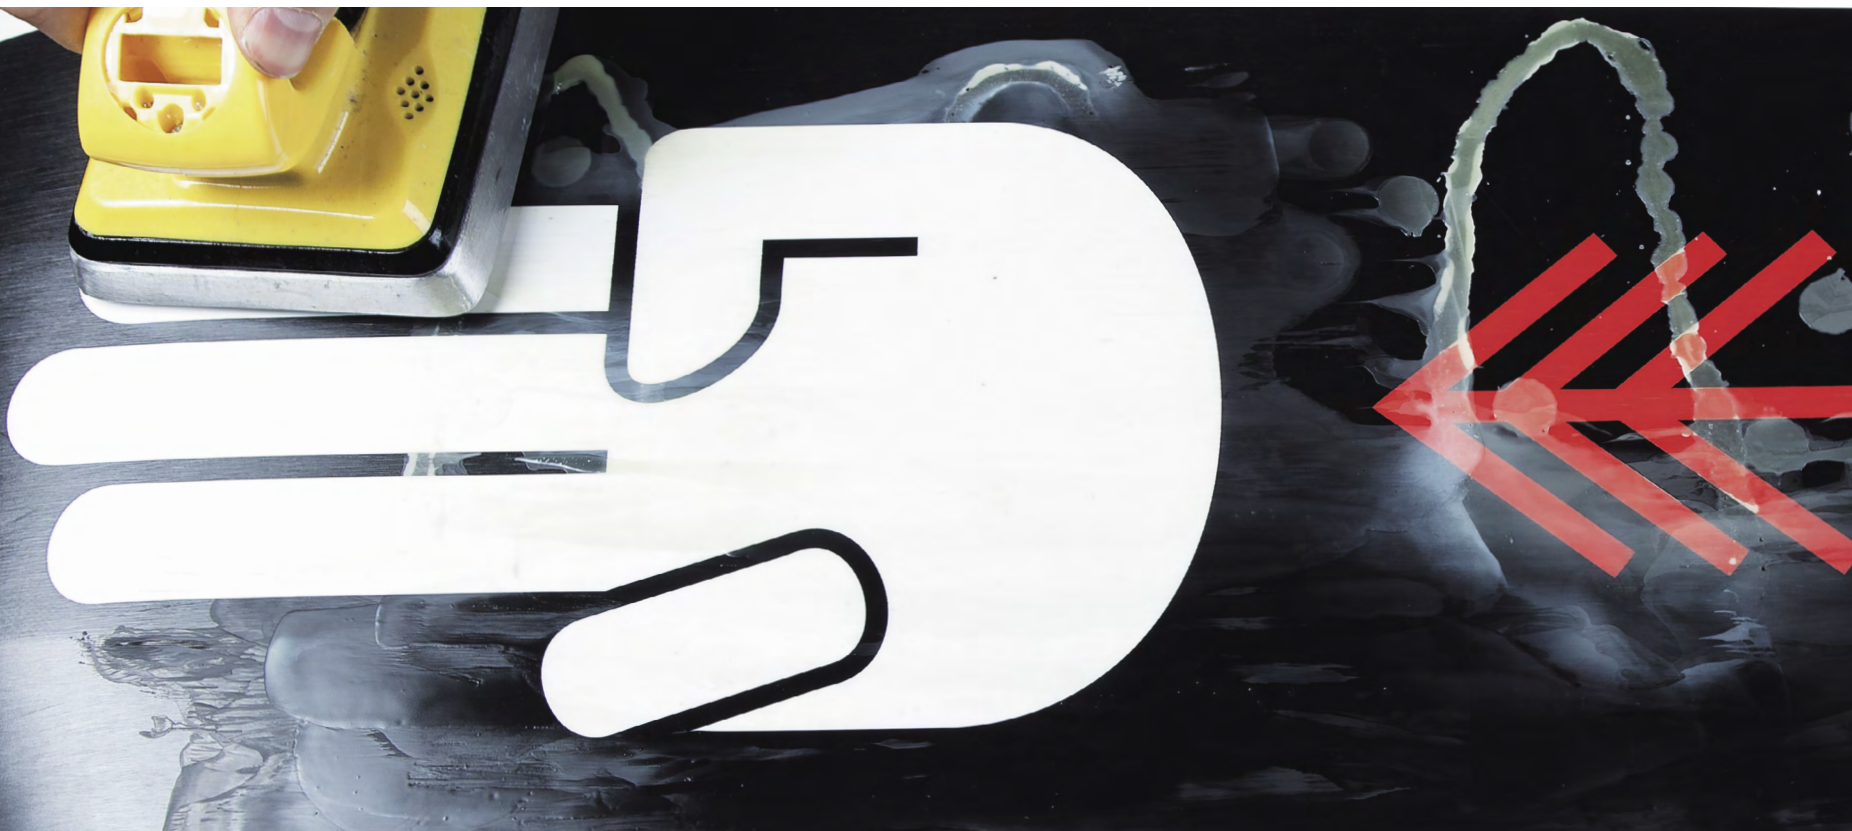

WALLIE - C.S.T. CONSTRUCTION

The Wallie is a high tech park board built with our trusty Core Core (3.). A solid poplar core with two hardwood beech stringers running through the center of the board maximizing pop and reinforcing the insert packs. It features the Carbon Core Enhancement with a single hollow carbon tube milled into the bottom of the core to deliver even more pop. The core is wrapped in bi axe fiberglass (1) which has fibers woven at 90 degree angles to keep the board torsionally soft. The torsional flex is then countered with two horizontal carbon strips (2.) under each insert pack. These strips give you more control when riding a softer board at high speeds. The whole package is held together with ultra durable ABS sidewalls (6.) and German steel edges (7.) with increased inner tang size for improved impact resistance.

Maintenance & Warranty

Tuning

3BT™ boards can be waxed and scraped like any other snowboard. When it comes to heavier work like base grinding, we recommended it be done by a knowledgeable tech on a machine with 3 separate rollers. Although the base has uplift, there are actually 3 flat sections so they can be ground evenly.

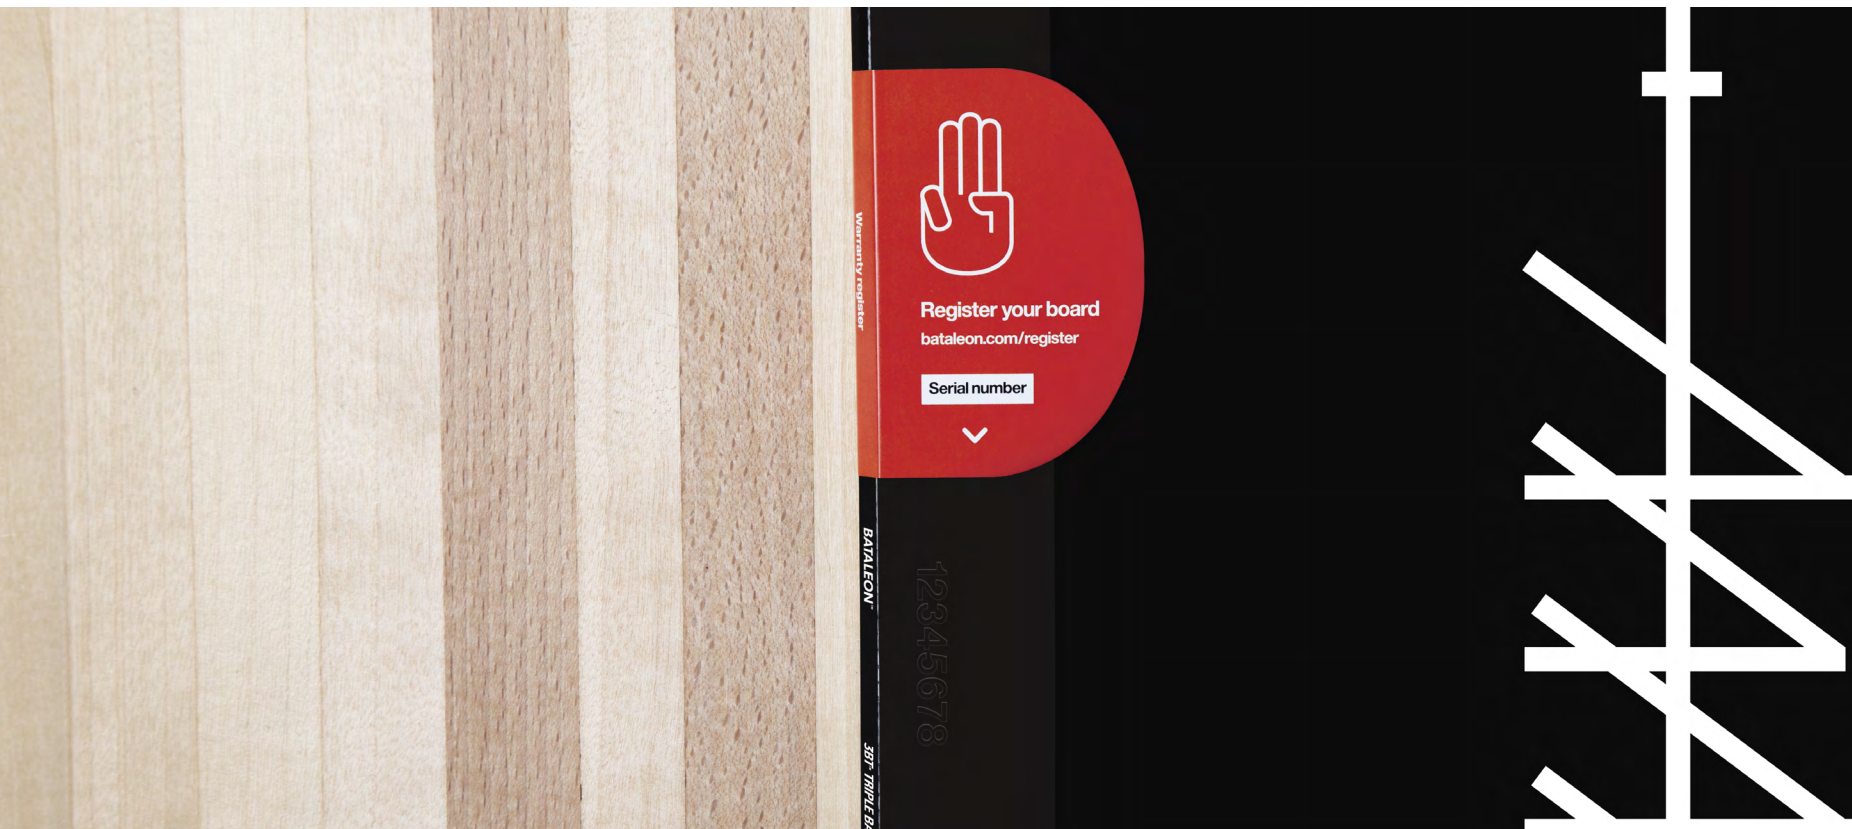

Warranty

We stand by our products. Every Bataleon snowboard is handmade, quality checked and backed by a 2-year warranty against manufacturing defects. Register your board to make the warranty process smoother should any issues arise. www.bataleon.com/register

2 Year Warranty

Line Up

1819 Boards

This season sees the largest overhaul of our women's line in Bataleon history. With four shape updates and two new models, our women's line is now extended to seven models. We work closely with our team and utilize their feedback to produce boards for all rider levels. We take these boards seriously and they represent years of development and hard work.

R&D

Bataleon MNTN Lodge

The Bataleon Mountain Lodge sits deep in the heart of the Austrian Alps. Tucked away at the narrowest part of the valley at the base of towering mountains, the lodge sits between one of Europe's best terrain parks and one of Austria's best freeride resorts. With the mighty Dachstein Glacier around the corner, it is perfectly suited to test our gear and inventions in any conditions imaginable. We spend most of our winter at the lodge riding and testing with the team, ever dedicated to find new ways to innovate and improve our line and push the envelope in 3D snowboard shaping. Come visit and ride with us!

Customer Feedback

Jan "The Wallie was the perfect board for todays sunie laps. Stable and held an edge well. Landings were solid and easy to find thanks to the luck from the JB TBT. Perfect rail fucost board for anyone looking to improve their rail riding!"
Sam Slam "I used to have a quiver of 6 boards, tbt made all but the race board completely obsolete, the jam is a quiver of one. Now I wonder how tbt would be on a race/alpha/freecave board would be? tbt don't make boards slow, that's for sure."

Karl Hughes "Thanks to the Whatever I Board!!!! I now have 2013 Magic Carpet, The Jam, Evil Twin, so much so I have just bought a Jam too...now I look forward to some WOVW in the POW! Cheers Batealon!"

Shuan McGuinness "I bought The Jam 2 years ago and have never looked back. It took a little while to get used to TBT but even when I caught an edge I can regain control and don't end up head first in the pow! -awesome! live in the French Pyrenees and the jam is a quiver of one. Now I wonder how tbt would be on a race/alpha/freecave board would be? tbt don't make boards slow, that's for sure."
Ross Cleland "The Global Warmer is by far the most fun board I've ever ridden!"

Nike Smith "The guy in the store (EVO) told me that on Batealon you get best of both worlds due to the 3D base (3BT). Lose and forgiving like rocker but the stability of a cambered board. Sounded to good to be thru but it really is. This GW is a real/buy before it's still does perform really good on medium sized jumps and even carves better than any board I've ridden before. Highly recommend this to anyone looking for a jibboard that does more than just that."

Old Griz "Took my new Jam out this season to an icy week in the 3 valleys with my brother and his new albino-cord top-end freeride deck from another B!mad friend. After a warm up couple of runs, a race was clearly on the cards. When he finally made it down, I tried not to gloat. This board is lightning, love it. If you want to poote around or do a little pops, forget it- get something else. If you want to go huge and moon all over the hill, get the Jam. No question."
Ricardo Camacho "I bought a THE JAM 2010 and it's an awesome board. I have been to Val Thorens and Les deux alps with it and for those two times I left my 650 euros L&B T@h Di@k St@r@ss at home...2 Super board/flat, precise, quick and smooth turning and good edge hold!"

Sander "Just came back from Val Thorens. First time out on my new Jam 161 wide. TBT truly delivers what it promises. It's stable at high speeds and easy to change direction. If you think of buying a new board, get one of these!!! It's awesome to ride and has wicked graphics."
Michael GR KLMT "Ready for flawless JAM sessions with my 157 JAM...TBT ROCKS!!!"

Fani "I just want to share with you that I've been riding for 17 years so far and since I tried my first Batealon board 15 years ago I got addicted. But what really want you to know that I'm totally in love with my Distortia board. The best thing someone ever made for snowboarders girls. thanks guys!"

Sabino "I have never felt so comfortable going so fast through so much terrain as I do on my Goliatth. Two seasons in Fun. It's amazing that it really does cover the entire mountain (e.g. all of Whistler / Blackcomb) without ever feeling stretched out. I would never put anything else on my feet."

Jean-Christophe "I just bought the batealon goliath 157cm and I'm in luck on perfect spring conditions in French alpes. TBT is amazing, that's a pure feeling, I have tried it and I keep it I never ride such a thing, the best lever tried."
Daniel "Bought a 2012 Goliath intending to just ride it on powder but it goes everywhere on the mountain. No more catching edges and the board looks slick. TBT is where it's at!"
Comme Eclair "Just got a 2013 Goliatth and after riding it for a while I would def pay full price and beyond for this board. It's perfect as an all round stick."

Lo "I worked as a snowboard instructor for an entire season on my Goliatth. I can confidently teach snowboard students from every level with it, beginner, powder, carving and park. The board also made me ride much better."
Pierre Martinneau "Crazy!! Got an Aiabolic and Funkink before that one and the GW takes the best of both Aiabolic and Funkink. Pure as fresh air and it's even more and incredible in the powder, it goes surprisingly well. Thanks Batealon!"
AdstarUK "Hey guys..... Finally got to use my Goliatth in Saize d'oz, Italy. What can I say... Simples. Best feeling ever. One amazing board and its not just the tbt its all. What can I say... Batealon is my only board of choice! Cheers guys dont sway from the tbt on ALL your boards."

Ryan, Bantl "I just started boarding this year. While checking around local ads, I came across an 08 Goliatth and the board was excellent. After that I took it over to Morzine/Avoriaz where the conditions were icy and the piste compacted hard. Again the Goliath held its own and it kept me upright on some hard runs. I'm a convert to this type of board and recommend if you have tried it then give it a go, it truly is an all mountain classic."

Nike H "After 13 years of riding I was curious enough to buy a Goliatth 57 this year. I'd read that it might feel a bit sluggish from edge to edge but frankly that's crap. Just back from 3Valleys where its seen powder, corn, icy mogs and kickers and it was the best mix of it all. Can't wait to ride it again and would highly recommend TBT to anyone. Good work guys."
Stefan "This Friday I finally rode my Batealon Goliatth 63 that I bought last year. Let me say that TBT is simply amazing!!!! The advantages of camber with none of the disadvantages. The catch-free sensation is beyond belief. Next year I'm surely getting a Disaster 148 and maybe a Undisputed 161. Yeah for it!"

Janie "Bought my 1st board this season its a Global Warmer and I defo made the right choice... This board can do it all!"
Brent "Just rode my Goliatth for the first time at sierra. I gotta say I don't think I will be going back. The TBT is amazing, the edge to edge is effortless so fun and fast. im with Batealon forever! you need to buy a batealon!"

James "Bought a 2008 Goliatth 164w second-hand and have just got back from riding it all over Val d'Isere. Unbelievable experience and had such a great week

of boarding. Will be upgrading to the 2012 model next year fsho! Thanks Batealon!"
White Magic "I started boarding in 2015, using a Burton - catching edge after edge. This year, 2016, I bought a Batealon Whatever board (and a funkink), no edge catches thanks to the TBT and my boarding progressed so much, I flipping love it. The board has a nice mound of flex, looks fantastic, easy to ride. I love brand loyal when you get a Batealon board, you become and can't wait to see their new lines. I'd love to try more boards! Magic Carpet, The Jam, Evil Twin, so much so I have just bought a Jam too...now I look forward to some WOVW in the POW! Cheers Batealon!"

Wladino "I have 2013 Whatever, whats to say looks good, carve almost by itself, jumps and trick friendly and quite light think...veeery satisfied!"
Patricio Villanueva "Estimados Hace unos meses lell con atencion sus consjes y las caracteristicas de sus tablas y adquiri junto a un amigo dos tablas, una Whatever y una Aiabolic. Ambas de 165 cm 2013, las probamos en Las Leñas y en Bariloche aqui un Argentina y sus duds con unas tablas excelentes, permitian realizar todo tipo de trucos y son muy diverstidas, sin dudas seguire con la marca !!! Felicitaciones por el gran producto que realizan y el famoso TBT que es fenomenal! Saludos Patricio"

Jeanine Verpoorten "I tested the Batealon Whatever during the Dutch week in Valthof and what an experience it was! It is really a great board for whatever you want to do on a new world of wonder."
Lana "I love my distortia, all my friends want to steal it, 'cause its soooo pretty, And on the techie side I've ridden park, jibbed aboudt and most amusingly for a 147 managed to ride 2 foot deep pow, the triple base defintly helps the float, even for a fun boarder!"
Julian "I have the 2013 Whatever. Definitely yeah for it! It's my first Batealon board and not the last one!"
Aaron "Have got the Whatever and its a awesome board, easy to turn and fun to ride and it'll do anything you got the balls to do. Big fan of Batealon. 'Yeah for it!"
Winxy "This board is amazing. I came to this board from an Arbor Slash and it feels a huge difference in my riding. It's stable while going fast, and super easy to ride around in the park. Highly recommend the board. Regarding Batealon the company... I had to submit this board to Batealon for warranty replacement, and within a week I had a new board. No questions asked. Customer service was phenomenal. Batealon, you have won yourself a lifetime client. Karl Hughes "Thanks to the Whatever I board!!!! so much so I have just bought a Jam too...now I look forward to some WOVW in the POW! Cheers Batealon for giving me the door to a new world of wonder."

MC "This board will make you feel all kinds of better. Got it a couple of years ago. Really versatile, floats on powder, well up to a knee deep (maybe not so much in waist deep) and is a super fun board on a resort, although I've had my struggles carving with it on hard pack icy groomers. In Overall, made me happy. My roommate kept borrowing it, she seemed to like it! Hard to give a buying a new board and here I am looking up the same one...again!"
Allistar "Just back from a week in Serre Chevalere, where I had to live a board due to carriage restrictions on a last minute flight deal. I had to make it work through a local shop. I have been riding for over 20 years and normally ride a Burton Dragon and Libtech Pacificer. Took the 162 W for the week and was blown away with the capabilty of this board. Off piste was hard, so didn't get a chance to try, but handled the packed carpets with ease. really liked the triple base tech. Felt really solid at speed and playful, but was surprisingly competent once the piste hardened up towards the end of the week. Will definitely be checking out your boards when I come to retiring my old boards."

Mike "I've been snowboarding 22 years now and Batealon is the only board I'll buy simply b/c they have the best product on the market. Fun Funk is my go stick b/c the flex and catch free ride is perfect for this 47 year old ripper."

Karabelle "My all boards was Batealon. And this year my dear "Fun.Kink" is coming, awitterscoming!"
Paul "I was hesitant at first but I decided to get the Funk.Kink and I have no regrets. It delivered everything I had hoped for. It's fast, flexible, and forgiving. On top of that it has tons of pop. Batealon took fun to a whole new level!"

Jay "So I got to try a Funk.Kink last year and let me say it was one of the best feeling boards I've ever rode! It could shred pretty much anything (park, groomers, backcountry booters, and even deep powder!) I'm looking into buying a Batealon for this year, so I thought I'd get some feeling on your guys on which would be best for me. I'm 125 lbs, just over 6 feet tall, and have a boot size of 10.5. Live in B.C, Canada so im looking for a board that can handle some deep pow, and will jib down the main runs, with the odd park lap through the woods. Thanks Batealon!"

Mark "Ya! lol finally took my Funkink out on the white stuff... Was getting greets for the board from staff and guests before I even hit the snow! Just getting over an ankle injury but this board still felt a dream. Smooth, sharp turns, spins like a nutter without catch and the flex is sick! Day one but loving it already. Big ups from NZ. Batealon! Tulu meke"

Drewbette "Just ordered my 149 fun kink soo pumped to rp up some rails!"
Stu Cant "So I've been riding my brand new 154 funkink for the past couple of weeks now and what else can I say but wow! Actually I can say more... I did have a BS5 evil-twin (smiley face one) which I loved and still do but the funkink with its softer flex and bunted tip n tail is awesome! it has great pop twice the height for half the effort, more butter than an obese artery and can really shred pretty much anything in front of me, the only bad thing I can say about it is at high speeds it does tend to chatter a bit but hey it's 154 and im 173. Batealon, you must first rode the evil twin at a demo day at cardies in 07 you've had a customer for life and my new stick only comments that decision!! YEAH FOR IT!!!!"

Vanesa McCarthy "Batealon Snowboard Fun Funk 153cm Wow I demd!! D this board over the weekend and what an amazing fun board this is for a girl. It holds edges with no wach in the back, and also allowed me to pop ollies with ease... unbelievable difference getting air on this board. I couldn't believe how easy, enjoyable and awesome this board was to ride. I own a GSu, a bQ&S, and a s-/5/n. I'm seriously considering buying this board, so that's why I'm rocking it. The best I've ever ridden yet. Blow away."

Brent "I got to try out I can kick 161 last month and it was fun. The TBT is a super fun way of riding, it stashes the park and carves like an animal super fun in the park and dont even mention riding it switch i didnt even know i could do that b 4 fun kink trix !! be buying tbt next!"
Carissa "The just started jibbing and had a demo on

the Distortia. I nailed my first ever backside boardside first shot. TBT makes it so easy to play around without catching edges all over the place. Buying mine later today. Yeah 4 it baby."
MikK "Went and got myself Fun Kink. Us edition 153. Seriously, what the heck is that witchcraft? This is the best thing I have EVER ridden. It's amazing how fun that board is. Since I hurt my leg pretty bad a few weeks ago I thought my season was over, snowboarding just was not fun anymore. Needless to say that your board changed it. YEAH FOR IT!"

Daniele "Start sunday I tried for the first time my new shining funkink and i rocks dudes! the triple base is the best! for riding, my older (other brand) boards sucks! thank you batealon, i will never leave you! -I smile it's snowboarding!"
JayP "Hi @al. I've test my batealon fun kink US Edition last week in Hoch-Yring and won't have another board itAs so amazing! The Fun kink roooooo!! I can just say i will never ride an another board! YEAH FOR IT!"

Grant Hopper "I have never ridden anything like it, my first ever board was a 8&10in Crd5m which apparently doesn't catch edges, thats not the case, I spirited my wrist because it did catch a wrist, luckily the graphic started peeling and I sent it back to 8&10in and they have me a store credit, after taking to my "best friend" top to Bottley, he gave me a Batealon domo, and I was blown away. I only had 2 runs on it and that's all it took to buy, I bought a Batealon 153 Fun Kink, it's the most playful fun board I have ever ridden, you get amazing pop, you CAN'T catch an edge, its really flexible and is super light. I have never ridden a board that will actually bounce or board off an edge. For me there is no other company in the way of the boards! Love my Batealon Fun Kink and will never ride another brand. Thanks Batealon Yea For It!"

Al Kingsbury "Feel like I've won a prize being one of 200 to win over the batesalon. Only thing that could replace my funkink. Blessed the TBT stable. Ah less my b! Yeah4it this year I bought a funkink, it was my first batealon and it has been the best board ive ever owned! TBT has helped me improve so much getting a ride and now its the only brand of board i ride. this year forshure next year TBT 4 LIFE!"

Link "Snick - Snick - Snick did! Every turn you put force into the carve, it digs in and shoots you down the hill. One hell of a board. Loved every second on this board. Brutal and so much fun."

Ritchie "Fun and a new nice sensation!"
Ben "I really love this board. It's perfect for powder, smaling like the cheshire cat! Carved around piste and off with ease."
JOHNNY BIG

"BEST RAIL BOARD EVER MADE....."Igo "Knock your nuts off gnarly. Possibly the best Batealon Ever!"
Ben "I've done a lot of little in the inline. It carries like it's on rails and the shape allows you to pow through turns. It was sick in the slush and I guarantee that it's ever better in the Pow!"
Laura "Felt good edge to edge"

"On the Evil Twin now, boards are sick and the construction is such a good quality that they last through a full season riding all day almost everyday. Tried a few different sizes depending on where I was based for the season but at the end of the day they can handle anything thrown at them."
Tyler "Got my 161. It's a Jam 161 and it is ballistic. Decided to get an Evil Twin 156W and it is freakin' insane. Never had so much fun on a board in my life, it takes just about anything you want to make it do. Wide, eye board makes for deeper carves and as its shorter and has more flex, you can spin it on a dime and get that pop!"

"The best board I've ever ridden, it's so light and so forgiving with your face in the snow. Has to be the best board out there!"
Manuva "The first Batealon I tested was "the Hero" and that day I just impressed my humble self landing pretty much everything. So I got "the Enemy" which actually became my trust board. A real chaser from powder to halfpipe. Then I probably "home"made the first uni-Split-ed which I still use after 5 seasons. Now I use mainly the Camel Toe in the deep and the Evil Twin elsewhere. It's pretty versatile and I also take it to the tracks or even snowkiting. I do a lot of park laps (no street though) and the melt n flex works for all sorts of fat tricks or endless buttering that would be impossible on a flat board. With the big comeback of carving I would say the next generation Evil Twin should be a cm wider I use 159W generally."

Pat F "ride my baker about 50 to 75 days a season, the camel toe was my board of choice for powder days over a foot of fresh. I have now been riding the Ornni on all of the good days and absolutely love it. I rode it in 14" a couple weeks ago and I was completely amazed all over again once you ride directional in deep powder. It's hard to say but also a beauty. What more can I say!! It's just it!!"
David "Surf like a dream in 2 meters of fresh powder..! LOVE My Camel Toe! And if you are planning a 50/50 day don't both powder and piste, don't worry about it, you don't need 2 boards, the Camel Toe runs and carve hard also on piste!"

Manuva "So glad!! Got the Camel T no more lactic acid in my back leg. It's one of a kind in the deep and you can ride fater parts of the mountain. It's very close to a surfboard feel. The pronounced tib produces a super smooth and easy ride."
KOREA "Hello, I am from Korea. The Camel Toe is amazing!"

Eric J "I straight forward Love the Global Warmer and the Boss.. I have owned well over 30 boards and for park, trim, under a foot of pow they do great! For progressing riding switch the tbt is the best out of the 15 boards I've owned. The B company boards and they were good, however I didn't progress as fast as I wanted."

Rob Schroter "As an older (54) Jess experienced snowboarder (4th season), I took it on... to learn amongst other stuff, do too 80's carving, take first steps onto buttering and follow the rest of the guys on and off the piste. This board let me do it and forgive me my years (in experience). It still takes me a few

levels up everytime I try a new (-ish -) stuff. I was a Batealon fan from the first time I had one, but I never expected a board that is fun all the way."
Dominic"Awesome freestyle powder board that is very playful and buttery on piste and a lot of fun. Soft flex and assess through the soft powder without having to try to hard. The board is a little soft for the first bumpy stuff, but for everything else it puts a big smile on my face..!"

Martin "Very loose "skate" feel to this board which was really nice in pow+ piste. Though it still held an edge well. I own a global warmer and this is a more mellow version of that."

Sam Oetker "The Batealon Magic Carpet was one of the most unique and fun boards that had the pleasure of testing this year. The 3BT in the nose and tails is super pronounced and distinctive (think hull of a boat) and it floated in powder like an absolute dream considering I was riding it pretty short. It was also super fun to ride on piste thanks to its twin-tip shape and softish flex, which made buttering around felt effortless. For a relatively soft board, it dealt with speed well and still felt stable and responsive when charging. I'd recommend this to no riders who are looking for a versatile and playful powder board that they want to have a lot of fun on..."

Steve "Took this board for my first rides in the Norz... On an off piste and was absolutely blown away. I have never ridden anything so smooth, fast, light, and effortless etc. in powder. I can see why it's aptly named "Magic Carpet" because it was floating most of the way down. It made the entire day an unforgettable experience, and I can confidently say this is the best board I have ever owned!"

Alexei Sapsford "The name of this board is apt for it. Feels super stable on pretty much any terrain. I've ridden it for 8 days now and even though I'm a tall guy (6'2"/188cm) was feeling very comfortable at 50mph+ on this board. Seems a lot lighter than some of my other boards and even with the stability has enough flex to have some fun with. Very buttery when it needs to be. Runs wider than regular 156 boards which works well for us big footed people."

Tiffany "Dear Batealon, I took out my new Distorta for a rip for the first time this season in Fernie BC, and it was amazing! I've tried different boards, different lengths and flexes, and I have never felt so comfortable shredding on a brand new board...ever. The TBT made everything feel so effortless and fun! I can't wait to try my funkink next! Thanks for the good times!"

"This board is so good that it finally won me over to Batealon. In the past I've found their Triple Base Technology a little loose and sketchy on ice, but the finel-tuned version on the Magic Carpet makes it a very stable and fun snowboard. The tech and shaping has been taken from last years' Whitegold Proto, and it's a huge improvement. I've had a lot of fun and love to mess about and try new things. Whether its in tight trees, off side hits or ripping down the piste, the Magic Carpet flexes over everything!"

Henk van Hattem "This is the most fun I ever had on a snowboard. It makes so much sense to ride twin in the snow. So fun to take 180's and 360's and to be able to every which way super easy to land cliff jumps. Also use it in the park and its good on side hits."
Chris Cartwright "WOOOOW.. What can I say, I took this away at the end of last season to the Alps and loved every minute of it, everyone in the group had to go and everyone loved it, short so turns on a knife edge, and every which way super easy to land cliff jumps. Also use it in the park and its good on side hits."

ers who are trying new tricks and are sick and tired of smashing themselves to bits in the process."
Petter "I'm still riding (season 2014) my Evil Twin from 2007 and I freakin love it even more for every season. Works great on everything from rails to powder and I will never buy a new board unless it has TBT!!!"

Dalton "I'm a level 2 CASI instructor and I would recommend a Batealon, Great in the park and all over the mountain. I ride an Evil Twin, sick board."
Fred "Got an Evil Twin and took it out today for the first time and it kicks more ass than Jackie Chan on speed. If I ever buy another board it will be Batealon period."

Ryan Hargreaves "Knew I wanted one from the day I found out about these guys. Bought a 2009/10 Evil Twin 155 and love it. It fell everyone that the biggest difference is when you go back to any other board, you feel like you're gonna DIE! Bombin' 120kph on my Batealon though...No problem."

Kieran "these boards rock, i just got an evil twin and its rid, super buttery but carves like a fend and the flex is perfect, takes a while to get used to, especially if you're riding park but its well worth it. bottom line, buy this board if you want to ride better!"
Ethan "Batealon is awesome. Evil Twin best board i have ever ridden...Love you guys so much getting batealon tattooed on my leg!"

Joe "A friend of mine had one and I didnt really think of it until my own snowboarder friend mentioned it was a whim. Now I've had a few snowboards, in order, mowr, trans, salomon, Burton, park, batealon, riderock, seweriker(cant spell that one) by far, the batealon is my favorite board for everything on the piste, i even found it fun off piste, and its a bloody f@lllwwinnn park board!!!"

When someone is getting a new board it will be another batealon, infact I might get a goliath anyway if you sold a tapered, rockard nose pintail I would have that as well i've not met that many people on the piste with batesalon, but whenever i do we give each other a nod, and normally have the "I'll never have another snowboard again" talk because you have hit guessed, im a fan!"
Ed Jones "Just Wow :J I first heard about Batealon from a good Japanese friend of mine 4 years ago and i hadn't seen them before, then again in NZ 2 years ago from a Czech friend. The after hearing the Helguson boys are using TBT on their boards I thought I'd give them a go. I've picked up an Evil Twin 156 Wide and it's amazing! Way faster than I thought it would be, nice and soft for mucking around, holds the edge solidly through hard carves and most importantly is a bag of fun! The TBT takes a teeny bit of getting used to, but its so easy to take 180's and 360's and to be able to every which way super easy to land cliff jumps. Also use it in the park and its good on side hits."

Anno "I love them. I'm a proud owner of Evil Twin and Aiabolic. Most of my friends ride Batealon. We are some stick notes guys. I'll just ride it this weekend and I'm excited to complete my quiver. Thank you BATEALON for your products! So much fun. YEAHFORIT!"

Riley King "my first day, first thought on the evil twin was GODDAMN!!! Everyday every run is still GODDAMN!!!"
Tyler Kingdom "I bought the 161 and it is ballistic. Decided to get an Evil Twin 156W and it is freakin' insane. Never had so much fun on a board in my life, it takes just about anything you want to make it do. Wide, eye board makes for deeper carves and as its shorter and has more flex, you can spin it on a dime and get that pop!"
