**ROME
SDS**

ALL WAYS DOWN

Temperatures drop, storm cycles come and go, the sun hides and the rivers freeze. The fickle mistress we call Mother Nature remains undefeated. But within this chaos lies our very existence as snowboarders.

While each season seems to bring a host of new policies to the local mountain, an array of questionable tech jargon and a grip of fresh faces, change is the only constant.

Since 2001, the only constant at The Rome Snowboard Design Syndicate has been passion. This insatiable hunger for all things snowboarding has fueled countless late nights, even more first chairs and a bottomless supply of stoke.

Fueled by passion, driven to create and stubborn as hell. We are the SDS and this is what courses through our veins.

A storm is brewing. The winds of change are howling, the drifts are piling up and the roads are a mess. Set your alarm, 'cause tomorrow is going to be epic.

*Since 2001 'til infinity,
we're ALL WAYS DOWN.*

ALL WAYS DOWN

*Never too deep,
never too far.*

BLUR

THE HIGH OCTANE SCREAMIN' DEMON

The Blur is designed for riders who want to achieve terminal velocity without worrying about losing their edge. Featuring our lightest materials and Carbon Dual Arc Turbo Rods that run along the board's edge, this puppy snaps harder than chop sticks under a semi-truck. With our hybrid, Fusion Camber and glass impact plates to help you ride away from even the sketchiest of landings, the Blur leaves everything else in the dust.

Positive camber with small pockets of rocker, the modern go-to for all-mountain performance.

MOUNTAIN DIVISION

RUGGED, DEPENDABLE AND UP TO THE TASK

Built for must-make landings, narrow chutes and bottomless trees, the Mountain Division is a directional dominator. Riders like Thomas Delfino trust the Mountain Division to handle chunder at the bottom of steep faces, but also to float through Japow with power and grace. A staple in the Tramline Collection thanks to Free-The-Ride camber and powerful Carbon Thruster TurboRods, the Mountain Division is pure snowcat versatility.

WINTERLAND

THE ALL-MOUNTAIN QUEEN COMETH

The Winterland is our offering for women who want a board as boundless as they are. With float for deep days and power for ripping groomers and stomping side hits, the Winterland is home wherever you take it. The secret sauce is the versatility delivered by the directional Free-The-Ride-Camber paired with the powerful Carbon Double Barrel Turbo Rods milled into the board's tail. From hiking the earliest lines of the season to slashing closing day slush, the Winterland is All Ways Down.

RAVINE

THE FREESTYLE-MINDED, ALL-MOUNTAIN MARAUDER

The Ravine is a board designed for riders who want the all-mountain performance of directional camber, with the playfulness of a softer flex pattern. It's a board that froths for deeper days, but still brings the fun to groomers or simply lapping sidehits with the crew. Built with a 3D rockered nose for effortless float, deep sidecut to lay ruts and a positive cambered tail for throwing clouds and stomping backseat landings. The Ravine is a pure party-wave of versatility for riders who paddle out no matter the conditions.

FREE-THE-RIDE 3D CAMBER

3D rocker in the nose, transitioning to a flat section under the front foot and rounded out with a healthy dose of camber in the tail

POWDER DIVISION

BOTTOMLESS GOOD TIMES

The name says it all. The Powder Division is a board built for those days when the stars align, and you find yourself with a blank canvas of bottomless bliss. With an uber floaty 3D rockered nose, thoughtful dose of taper and cambered moon tail, this thing has got a lust for cold smoke like a bobcat huffing gasoline.

POWDER DIVISION SPLIT

THE HUMAN-POWERED POW HUNTER

All the good times of the Powder Division with the versatility of a splitboard. Built on our directional Powder-S Camber, with a healthy amount of taper and an incredibly fun shape, the Powder Division Split floats in powder but still handles variable snow with ease.

WHITEROOM SPLIT

THE FREEDOM TO EXPLORE WITH THE RELIABILITY TO RIDE IT ALL

Whether you split to find new zones, or just to get some fresh air and beat the crowds, it's all about being mobile and versatile. The Whiteroom is quick and agile uphill thanks to lightweight construction, yet sacrifices nothing on the way down. Built on our directional Powder-S Camber, the Whiteroom is ready to feast on powder, but really shines when handling variable conditions. You gotta get up to get down, might as well enjoy both parts of the ride.

POWDERROOM SPLIT

FOR THOSE WHO KNOW LIFT LINES ARE OPTIONAL

Splitboarding is all about the journey; a break from the norm and a chance to explore something different. The Powder Room is built for women who enjoy every minute of the process and want to rip the ride down no matter the conditions. Because every day on the mountain is different, the Powder Room is equipped with the ultra-versatile Powder-S Camber. This directional hybrid helps with added grip in skinning mode, and shreds like none other on the way down.

NATIONAL NEW SHAPE

WORK HORSE DEPENDABILITY, DAILY DRIVER VERSATILITY

The National is a desert island board; if you could only ride one board for the rest of your life, this is it. Never has a board so quickly established itself as an in-house and team favorite than the National. With a ride-anything flex pattern, Fusion Camber backbone and almost twin shape, the National is truly an ATV of a board. Peak to park performance and style for days.

DEGENERATI MODEL 1

STAB OR BE STABBED

Kiss financial stability goodbye, 'cause you've got the fever. The only cure is a combination of surfing couches, smoking your lunch, traveling by van and putting snowboarding above all else. Our doctor, Mantis Toboggan, also recommends a healthy dose of Model 1. This flat cambered, negative energy counteracting, jib-oriented offering is perfect for those who have committed to a life in The Void; pushing the boundaries of a what can be ridden, while simultaneously offending everyone at Denny's.

DEGENERATI MODEL 2

CHAOS RULES EVERYTHING AROUND ME

Fear not weary traveler, for this is the end of the feed. You're all caught up. Hidden somewhere in the sequence of zeros and ones, lies an unalienable truth: snowboarding is all that matters. Be advised, Model 2 is not for the faint of heart; please consult your doctor before riding Model 2 if you've experienced loss of breath, weakness of flex, lack of camber, false prophets, bleeding of gums or general apathy towards snowboarding. For best results, please ride Model 2 only with all the homies under the cover of darkness.

RESPONSIVE BOARDS RIDE BETTER, PERIOD.

Good days on hill become great days when the right blend of materials and technology can fuse pop, feel and strength into your board. Through years of listening to The Syndicate, countless days riding, brainstorming, refining and researching, we've developed our signature HotRod, TurboRod and HiBeam technologies.

Available in an array of configurations and materials, these SDS innovations make every board we produce uniquely a Rome snowboard.

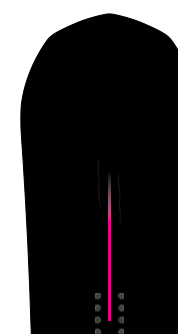

TURBORODS

TurboRods use the same principles of targeted snap and pop as HotRods, but are even more responsive and dynamic. First, a small sleeve is milled into the board's core, and then the carbon rod is inserted into a sleeve. This carbon rod is anchored only on the end closest to the board's midpoint, allowing the TurboRod to flex freely, creating optimum energy transfer while also creating loaded pop without any unwanted vibrations.

HOTRODS

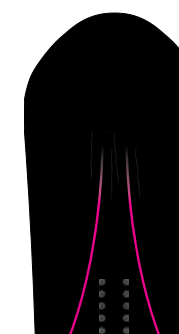

HotRods are thin rods that are milled into the core of the boards; these provide extraordinary levels of targeted snap and pop within any given board. Available in carbon, glass and bamboo, each variation of HotRods has different flex properties and is suited for different styles of riding and complimentary board flexes.

Ollie Pop ← ————— → Torsional Power

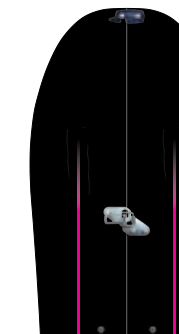

SINGLE BARREL

This pattern inlays a rod down the center line of the board, starting near the insert pack and running towards the tip and tail. This arrangement is great for freestyle boards, as it creates plenty of snap without compromising torsional flex and feel.

REVERSE RADIAL V

This arrangement features arcs that start under the bindings and bend towards the middle of the board at the contact points. The result is targeted ollie power and impact absorption; perfect for advanced and higher end boards.

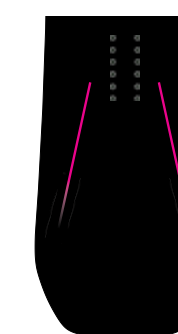

DOUBLE BARREL

This configuration features two rods that start under both bindings and extend in straight lines towards the nose and tail. The result is pure, powerful pop and torsional response.

DUAL ARC

This pattern follows the arc of sidecut on both the toese and heelside edges. The result is incredibly lively edge to edge response and explosively powerful snap.

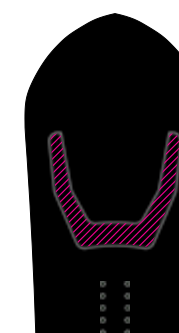

THRUSTER

This tail-specific arrangement uses two rods that start at the back of the binding and extend out towards the edge of the board. Perfect for directional boards and powerful slashes.

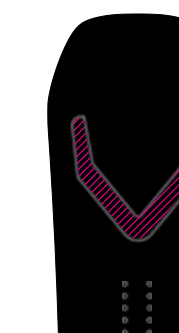

STRAIGHT EDGE

A single, straight line of core material from the insert pack to the board's nose and tail provides snap for ollies, but lets the rest of the board flex freely. Perfect for park-oriented riding.

VOID PACK

A debossed V-shaped pattern in the board's nose and tail provides a press-friendly flex pattern.

LOUD PACK

An embossed contour pattern in the nose and tail provides otherworldly snap, but also torsional stability at high speeds.

HIBEAM TECHNOLOGY:

HiBeams are our latest innovation to bring advanced levels of snap and pop to every board in our line. These unique shapes are milled on top of the board's cores, with different patterns and levels of thickness, to provide different levels of snap and impact absorption.

SIDECUT TECHNOLOGY

FIVEGNAR SIDECUT:

NAMED AFTER THE FIVE REGIONS OF SIDECUT THAT BLEND TOGETHER TO CREATE ONE SMOOTH RESPONSIVE ARC

Contact Camber boards, like the Blackjack and Kashmir, have a playful, loose feel that is complimented with bit of a kick and precision on edge. To give these boards a bit more edge hold and responsiveness, we created FiveGnar Sidecut.

It features two different sidecut radii used in five distinct zones of the board. The end result of these specific radii and regions of the board is a seamless blend and smooth arc, helping flat cambered boards to have a lively edge hold and more responsive turn initiation.

Nose Zone:
Sidecut radius 2—the tighter radius

Front Foot Zone:
Sidecut radius 1—the more mellow radius

Mid Zone:
Sidecut radius 2—the tighter radius

Rear Foot Zone:
Sidecut radius 1—the more mellow radius

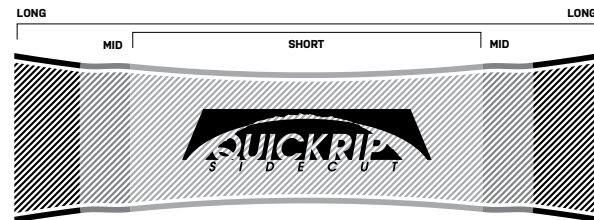

Tail Zone:
Sidecut radius 2—the tighter radius

QUICKRIP SIDECUT:

ADDITIONAL EDGE RESPONSE AT HIGHER SPEEDS, ADDITIONAL MANEUVERABILITY AT SLOW SPEEDS

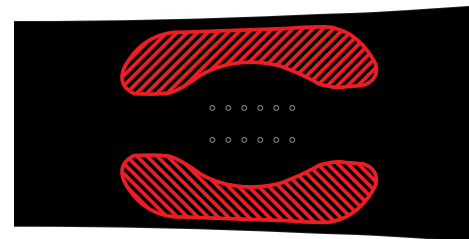

We created QuickRip Sidecut to bring added power and precision to the inherently looser feel that our rockered boards have. Two off-set sidecuts are integrated to create one sidecut zone in the nose, one between the feet and one in the tail. Instead of blending the sidecuts smoothly, we created 'bumps' at the places near your bindings where the radii meet. These serve to increase edge hold and turning response at high speeds, but also act like contact points at slow speeds, allowing you to make quick adjustments.

IMPACT PLATES:

ADDED STRENGTH UNDER YOUR BINDINGS TO FIGHT COMPRESSION AND, WELL, ABSORB IMPACT

The corners of your bindings put a lot of force on your snowboard, whether it's loading energy into the board or sending deep landings, this zone take a lot of impact. To provide extra strength on certain models, we add glass Impact Plates under the four corners of your bindings to disperse energy and absorb impact before it can compress the board's core.

SINTERSTRONG SIDEWALLS:

Designed to dampen vibrations and chatter, this material has more elastic properties than traditional sidewalls, creating more give and overall durability to a board.

REBOUND SIDEWALLS:

Built with an elastomeric compound that absorbs impact associated with park features, these sidewalls help boards last longer and ride more smoothly overall.

ROME CORE MATRICES

WE BUILD CORES WITH DIFFERENT WOOD DENSITIES FOR LIGHTER WEIGHTS AND BETTER FLEXES

AIRPOP CORE MATRIX

Integrated into a matrix of responsive poplar wood laminates, we lay in five zones of low-density, ultra light wood to reduce weight.

SUPERPOP CORE MATRIX

The lightweight, super responsive core found in many of our higher performing boards, this matrix features poplar for power and three zones of low-density wood for lightness.

POP CORE MATRIX

With the balance of response and lightness, this core construction is built primarily of responsive, strong wood, with two zones of a lighter wood species.

STOMP CORE MATRIX

For added strength in the park, we add zones of higher density wood in key areas to fight against impacts and deep landings.

TTT CORE MATRIX

100% wood is better for giving the flex and pop that all snowboards need—even the less expensive ones.

ROME LAMINATES

CARBON AND GLASS FIBERS CONFIGURED TO TUNE PERFORMANCE

45/90 CARBON HYBRID LAMINATE

The 45 degree fibers deliver edge response and power, while the 90 degree fibers keep the feeling locked and loaded in the freestyle side of things. Then we add carbon for added pop and unmatched lightness.

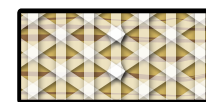

SUPERLIGHTBIAX CARBON LAMINATE

A lightweight matrix of 0 and 90 degree fibers is the foundation of this laminate's freestyle feel. Then we add carbon to give these boards more ollie pop and edge response.

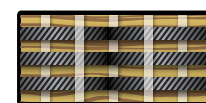

45/90 HYBRID LAMINATE

This laminate drives an all-mountain freestyle feel by combining the high response of 45 degree fibers with more playful and finesse-orientation of the 90 degree fibers.

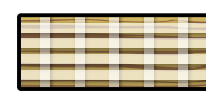

STRAIGHTTRIAX 30 LAMINATE

For our boards that we want to rip in natural terrain, pop sidehits on, and lap through the park, we want a blend of edge responsiveness and torsional forgiveness. This laminates use of 30 degree fibers helps create this profile—the right blend of power and playfulness.

STRAIGHTBIAX CARBON LAMINATE

With the integration of carbon strands, we add pop to our freestyle and progression oriented matrix of 0 degree and 90 degree fibers.

STRAIGHTBIAX LAMINATE

For boards where the focus is on fun and a more mellow feel, pure 90 degree fibers drive the personality.

ROME BASES

GO FAST, TAKE CHANCES

SINTERCARBON BASE

Based on our high-end sintered structure, this base features a carbon additive that reduces friction to give you knuckle-clearing speed.

SINTERSPEED BASE

For most of our high-end boards, this base delivers the premium speed that freeriders need for gliding in cold powder and that freestyle riders need for hitting take offs at the right speed.

SINTERTRUE BASE

A solid dose of wax absorbing power from this sintered base—high levels of speed for our mid-range freestyle and freeride boards.

IMPACT BASE

For park boards and boards that our team riders take to the streets, we've created a stronger extruded compound to help fight against the abuse of rails and boxes.

XTRD

A strong foundation of extruded base material that is plenty fast and super easy to repair.

ALL WAYS DOWN

Shake the hangover, rally the crew and get after it.

BINDINGS

19
20

CUSTOMIZATION
MATTERS

BUILT TO TWEAK, CARVE AND MAKE ANY
BOARD BETTER, WE BELIEVE BINDINGS
SHOULD BE CUSTOMIZABLE, DURABLE
AND NEVER HOLD YOU BACK.

SURFY

When we design bindings that have a more playful and flex-happy personality, we start with our AsymWrap platform. This asymmetric heel hoop chassis provides two points of connection on the inside of the binding and a single point on the lateral side. This creates an overall surfy feel without sacrificing any power transfer capabilities.

POWERFUL

For bindings that need to have an ultra-sturdy and responsive feel, we start with our Underwrap platform. Built with two fixed points of connection on the medial side of the binding and two fixed points on the lateral side, this chassis is tough as nails. The end result is a binding that's powerful and agile.

WHITE

THE ALL-NEW BLACK LABEL, BUILT WITH ROME INNOVATION AND FUTURISTIC TECH

1 NEW COMPOSITE HIGHBACK

- Upper composite is made of a biaxial glass fiber polystrand and thermoplastic material.
- Designed to be ultra-light and responsive edge-to-edge, without sacrificing torsional flex.
- Lower overmolded nylon heel basket allows for torsional tweakability.

2 NEW BLACK LABEL BASEPLATE

- Our stiffest, most responsive AsymWrap baseplate
- Built with nylon and 45% glass fiber

3 NEW AUXGRIP TOE STRAP

- Ultra lightweight and conformable design, thanks to an auxetic pattern which expands and conforms while still applying even pressure.
- The auxetic pattern acts like hundreds of small hinges, opening and conforming to whatever it is applying pressure to without stressing the material.

Think about going snowboarding like driving a new car, as soon as you get in, you adjust the driver's seat. Our bindings are designed to give riders the same kind of control and adjustment options for arguably the most important piece of gear to have dialed; your bindings.

We've worked tirelessly to bring the best technology for customization and comfort to every pair of bindings we make. We believe customization matters and soon you will to.

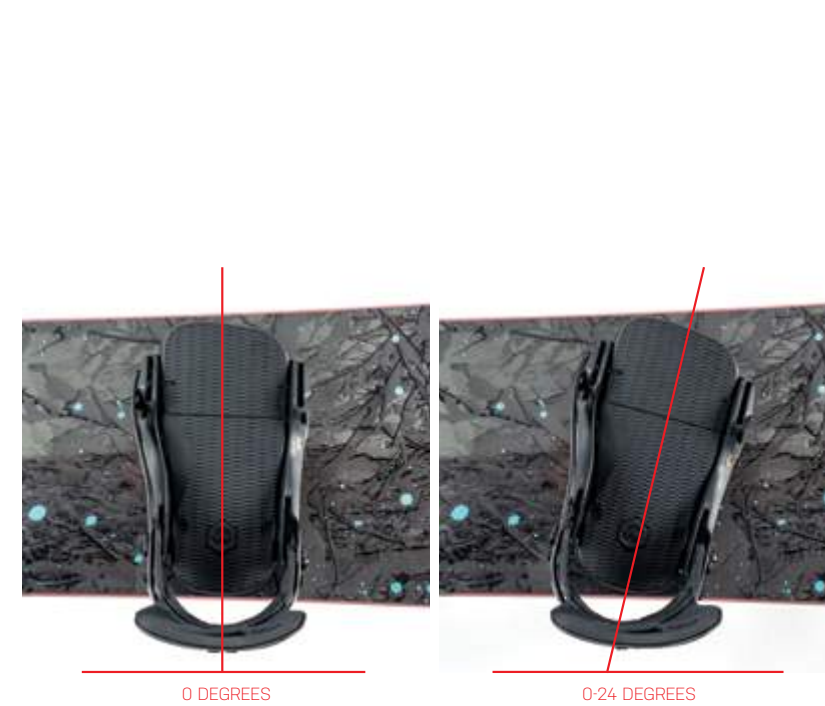

PIVOTMOUNT TECHNOLOGY

A Rome-exclusive binding technology, PivotMounts are small adjustable pieces that allow riders to move the positioning and boot placement of their ankle straps. The higher up on your boot the ankle strap goes, the more power and turn initiation. The lower the ankle strap goes, the more surfy and tweakable your riding will be.

The PivotMount Max provides 8 different options for strap placement per foot, so counting the unique options on both bindings, 64 total configurations are possible.

The simplified PivotMount provides 4 positions of ankle strap placement per foot, resulting in 16 total options for unique ankle strap adjustment.

- 1 MAX RESPONSE
- 2 NEUTRAL OUT OF THE BOX
- 3 MAX TWEAK

HIGHBACK ROTATION

Having your binding's highback angled to match that of the heel edge of your board just feels better, period. Being able to adjust your highback provides better power transfer, more tweakability and proper edgehold.

HIGHBACK CANTING

Designed to mirror the angle of a rider's lower leg to provide maximum comfort and energy transfer, highback canting can be a game changer for connected comfort. Our Cant-In-The-Back technology lets riders adjust the ankle of canting from 6 degrees to 0 degrees.

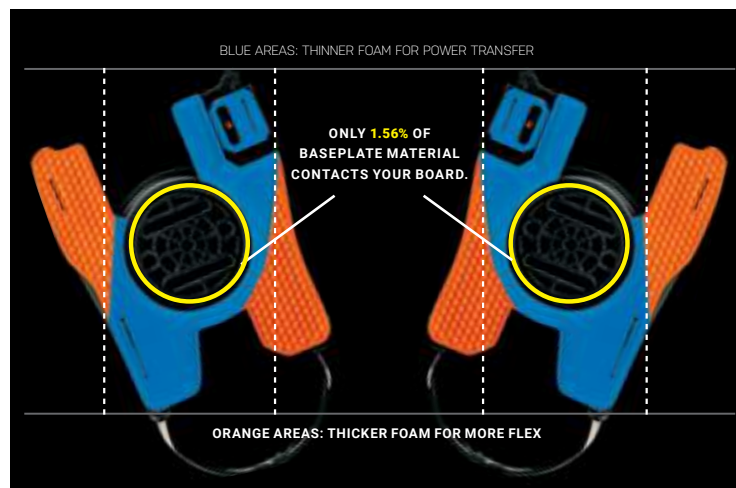

FLEX TECHNOLOGIES

BINDING TECH DETAILS

HIGHBACKS

Each one of our bindings has a different highback because each one rides differently. Most highbacks are asymmetric in shape, meaning they provide more power and stability on the lateral side of the highback and more flex on the medial side.

V-ROD BASEPLATES

V-Rod baseplates were developed to complement bindings that let your board flex freely and have less baseplate material in direct contact with your board. Power is driven from your big toe out to the lateral side of your heel, so we created a baseplate footprint that reflects that principle. The blue areas are a thinner foam which creates a direct energy transfer with less board contact. The orange areas are representing thicker foam for impact absorption, but also allows the board to flex freely the way it was intended to.

ASYMWRAP: SURFY

When we design bindings that have a more playful and flex-happy personality, we start with our AsymWrap platform. This asymmetric heel hoop chase provides two points of connection on the inside of the binding and a single point on the lateral side. This creates an overall surfy feel without sacrificing any power transfer capabilities.

UNDERWRAP: POWERFUL

For bindings that need to have an ultra-sturdy and responsive feel, we start with our Underwrap platform. Built with two fixed points of connection on the medial side of the binding and two fixed points on the lateral side, this chase is tough as nail. The end result is a binding that's powerful and agile.

ULTRA-ADJUST ANKLE STRAP

Featured on the Targa, this model gives riders three easy-to-adjust levels of flex in one strap.

ULTRALIGHT ANKLE STRAP

This industry-first hexagon pattern flex profile is a super light dog bone shape featuring the combination of an injected EVA pad and an interlocking TPU support band down the middle. The result is a super comfortable mid-flexing ankle strap.

MINIMIST ANKLE STRAP

Lightweight, smooth flexing with maximum coring, the Minimist Ankle Strap is everything you need and nothing you don't.

AUXGRIP TOE STRAP

New for this season the AuxGrip Toe Straps are the most advanced toe straps on the market. Using a single piece, injected design, paired with a unique auxetic pattern that stretches and conforms to pressure, these straps are more durable and provide better grip no matter the boot. The Auxetic pattern acts like a series of small hinges, expanding without losing any grip or hold.

CONFORMGRIP 2.0 TOE STRAP

Featured on our mid to high-end bindings, the ConformGrip 2.0 uses a TPU frame with a web of overmolded elastic material to conform and grip to the toe of any boot. Our use of high-friction, over-molded material stretches over the boot and locks your foot in place with a minimal amount of pressure.

MINIMIST TOE STRAP

A one-piece strap where the top and bottom frame effortlessly wrap the boot toe for smooth flexing control.

D3O SUBBASE PAD

D3O is a material designed to provide professional levels of impact absorption in helmets and other kinds of padding. We use it on the bottoms of the baseplates of our higher end bindings for advanced impact dampening and chatter absorption.

INFERNO SRT

THE DUAL BOA CHARGER

Built with dual BOA reels and our PowerStay Strap, the Inferno SRT is a no-nonsense boot designed for maximum response and powerful turns. This is the boot for riders who want the locked in feel of a full BOA boot, complemented with the dependability of a Vibram outsole for demanding hikes and long days ripping with a crew. Upgraded with our new Ultralon F.I.T. liner for increased comfort and feel.

ULTRALON F.I.T. LINER

Our most plush and customizable liner; built with dual density, heat-moldable Ultralon foam for maximum comfort and Ultra Footbeds, featuring D30 for impact absorption and AEGIS to fight stink.

INFERNO

RESPONSIVE, SLEEK AND READY FOR THE NEXT LAP

The Inferno is a sleek and responsive boot designed to provide all the hard charging performance a rider needs, with no added bulk or frills. This minimalist design is complemented by the power and support of a dual BOA reel system and GripRight Outsole, creating an ultra-nimble boot. Everyone's boot preference is different, but we can all agree that having the right boot feel makes good days great.
