SINCE 2001

# IT'S TOUGH S E M T

## Dear Duotone Community,

This is written from a place of newfound perspective on what the future of our sport, our business, and our global kite community may look like as we move forward in a climate that is still affected by the Covid-19 pandemic. Many beaches and kiteboarding locations are open and deemed safe to visit, which is great news and makes us appreciate kiteboarding like never before. The challenge now lies with every one of us and the responsibility we have to adjust our normal beach routines to ones that adhere to new local policies and safety measures. Not only will this affect normal sessions, but it will change the way that we organize demo events, which will now be conducted mostly as one on one bookings through one of our shops.

Additionally, we have adjusted our new product release schedule. We have done so out of necessity and also as a way to maintain a premium value on existing 2020 products in the shops and for those recently purchased by customers. Please anticipate a 3-6 month delay on some new products as well as expect a select number of products to be carried over from the 2020 line that will stay current through the next cycle. In effect, we hope that this will release some of the pressure created by a late start to the season for many regions.

However, please do not interpret this new schedule to mean that we rested on our laurels and took a staycation during our development season this year. In fact, we are excited to introduce some of our most innovative R&D concepts to date. Coming to you soon is a brand new range of elite products that will span product categories; SLS – Strong, Light, Superior. We will release Penta TX in kites, Flex Struts in Kites, Innegra Shield in SLS Surf boards and much more. With these top of the line developments, we know that we will have everything that the most ambitious, enthusiastic kiter could dream of and we anticipate that these new technologies will drive a thriving sales season to come.

When faced with challenges, our Duotone team has always shown us again and again that we will rise to the occasion, emerging with an even deeper sense of purpose and gratitude for our beautiful sport. So, we encourage you, our friends, colleagues, and shred buddies to stay positive and to keep dreaming. Be kind to one another, to your sports buddies, and please help do your part to keep your local access open. We look forward to a time when we are all able to freely move about the globe chasing wind and sun, but until then, we are thrilled to be exploring our favorite local spots with an entirely new appreciation. See you on the water!

TILL EBERLE

## SAVE OUR PLAYGROUNDS

POWERED BY

**“The greatest threat to our planet is the belief that someone else will save it.”**

Robert Swan,  
British Polar Researcher

### OUR PLEDGE

We are in business to create kiteboarding products. It is what we love and what we know how to do well. We've spent almost two decades developing, designing and honing cutting edge products that have helped shape modern kiteboarding. Unfortunately, by creating these products we love, we are doing harm to the very environment we need to practice our sport. Kiteboarding products and the processes necessary to create them are not environmentally friendly. As kiteboarders we feel connected to our oceans, lakes, and rivers and we see first-hand the damage we are doing to our planet. We depend on our natural environment and in turn believe it is also our responsible to protect it.

This is why we have made it our mission to breathe sustainability into our corporate structure at Duotone Kiteboarding. We recognize that we have only just scraped the tip of the iceberg with what we can do as a company and we plan to bring everyone along with us as we venture down this path to a more

sustainable future. It is our hope that as we find success with new less harmful materials or processes, that others will follow suit and we can help be a part of a transition to a new greener industry as a whole.

We believe that we can achieve our mission to create positive social and environmental change by analyzing each component of our business and continually asking ourselves the question, how can we do it better? In the context of the economic efficiency of B&M, sustainability is understood as a continuous process and part of the corporate strategy, not as a temporary project. Part of this process will inevitably be to overcome challenges as they arise, and we look forward to sharing these openly whether they result in success or failure as we can all learn from both outcomes.

We feel it is our responsibility to take action and do what we can to save our playgrounds before it is too late. And we invite everyone to join us in our efforts.

# ECO-PERFORMANCE MILESTONES

## 2020

- + **Hangtags:** 280.000 Hangtags are made of recycled paper.
- + **Save our playgrounds:** Together with the partners from Boards&More company the “Save our Playground” initiative was founded.
- + **Young blood:** Duotone Kiteboarding has repeatedly been involved in child and youth work, for example with Duotone Grom Search

## 2018

- + **Packaging:** Reuse of packaging at our warehouse.

## 2016

- + **Energy audit:** Recognize energy saving opportunities and reduce energy consumption within the company.
- + **New packaging concept:** Saving plastic foil, Styrofoam, poly bags and paper by making adjustments to our packaging system.
- + **New twintip production:** The production runs with 100 % clean energy and solvent free.
- + **GSL kite production:** Step by step conversion to solar energy.

## 2021

- + **Robline:** Efficient logistics and reuse of packaging at our line company
- + **Packaging:** Kite packaging made of recycled plastic.
- + **Waste2Wear:** Kitebags made of recycled plastic.
- + **Twintip production:** 100 % of the sun's energy used to power the Sports division's needed electrical capacity.

## 2019

- + **Climate neutral products in cooperation with Climate Partner:** All Duotone products and related products processes were termed “climate neutral”, as their carbon emissions have been calculated and offset by supporting a recognized carbon offset project.
- + **Duotone Clean Beach Day powered by ION:** The goal was to rid the beaches and the sea of garbage and, above all, of plastic, as it not only limits the enjoyment of kiteboarding but also threatens the lives of marine animals, humans and the whole planet.
- + **Duotone Surfboard packaging – 100 % plastic free:** A unique cardboard structure with strength means overall less packaging, making it a cost-effective environmental solution.

## 2017

- + **R&D material and packaging:** Ongoing research of new material and packaging to reduce the economical footprint of each product.

# RECYCLED KITEBAGS

It's our environmental responsibility to implement sustainable changes in our kite production wherever possible. In cooperation with Waste2Wear and as part of our Save our Playgrounds campaign, our complete 2021 kite portfolio will come in kite bags made from recycled material. Responsibly sourced, ethically made, traceable, measurable and CO2 compensated, it's the small changes that make the difference.

**SAVE OUR**   
**PLAYGROUNDS**

## THE FACTS

- + It takes 20 - 24 recycled plastic bottles to make one bag.
- + The production process uses 70 % less energy, 86 % less water and achieves a 75 % reduction in Carbon Footprint.

## THE PRODUCT

- + Lightweight, multifunctional and versatile.
- + Specifically designed lightweight padding for comfort and saving material.
- + Enhanced ventilation on top of the bag helps kite to get dry.
- + Exterior webbing to carry the board can be stored inside the bag through the webbing channel when not in use, for a sleek, modern look.
- + Internal pockets and key ring to keep your valuables safe and organized.

## HOW IS IT MADE?

# S/L/S

STRONG | LIGHT | SUPERIOR

## ADDICTED TO PROGRESSION AND INNOVATION

This season we're taking our innovative drive to higher grounds; we proudly introduce SLS - Strong Light Superior. Since 2001, we have made it our mission to make the best kiteboarding equipment to guarantee that every single one of your sessions is the best. We created many groundbreaking innovations like the Click Bar, Textreme Technologies and Trinity TX. Now it's the time for SLS.

Whenever you see the SLS logo on a product, you'll know, we put it there for a reason. SLS products are equipped with the newest, most innovative and simply best materials available for kiteboarding. This is the gear we want to ride, tuned to the millimeter over countless hours. Just so that we are 100 % satisfied, to know that we're offering the greatest experience you could ever have with your gear. This is our magic collection which makes us smile just thinking about it and leaves butterflies in our stomachs, even after we've packed up and headed home for the day.

# DUOTONE SLS PHILOSOPHY

## STRONG LIGHT SUPERIOR

### WE ARE DUOTONE.

We are Ken, Kite Designer. We are Elsa, Product Manager. We are Patrick, Marketing Manager.

We are the designer agonizing over the drawing table.

We are the manufacturer checking specs. We are the shaper glassing into the night.

We have always strived to create the best gear for the most riders.

But when we're not working, we're playing. And sometimes we want to build gear just for us.

When we're on the water we don't care about excel lists, market analysis, or productivity levels. On the water the only metric is performance. We want the absolute best kite gear that technology, materials, and design can produce. Bar none.

If you are like us: always pushing yourself and your gear to the edge, pushing past that point, redefining what is possible and still demanding more; more from yourself and more from your gear: If you are one of us, we have something to show you:

This is SLS.

SLS is more than Strong. SLS is more than Light. SLS is more than Superior.

SLS marks a change in thinking. Forget case studies and hitting price points. Stop measuring what the masses want. Design something for those who will sacrifice nothing for the ultimate performance..

SLS is truly the apex of what is possible today. Using materials both stronger and lighter than those previously available, we are proud that any product bearing the SLS monogram truly is superior to anything else available.

SLS is not about creating the most accessible gear, maximizing sales or creating turnover. SLS is about creating the dream gear for those who, like us, appreciate gear that enables them to redefine what they are capable of.

We are Duotone. We work. We play. Hard. SLS defines the point at which those two drives meet. Where expectations of what is possible are met by what we can achieve. SLS is where your dreams meet our reality.

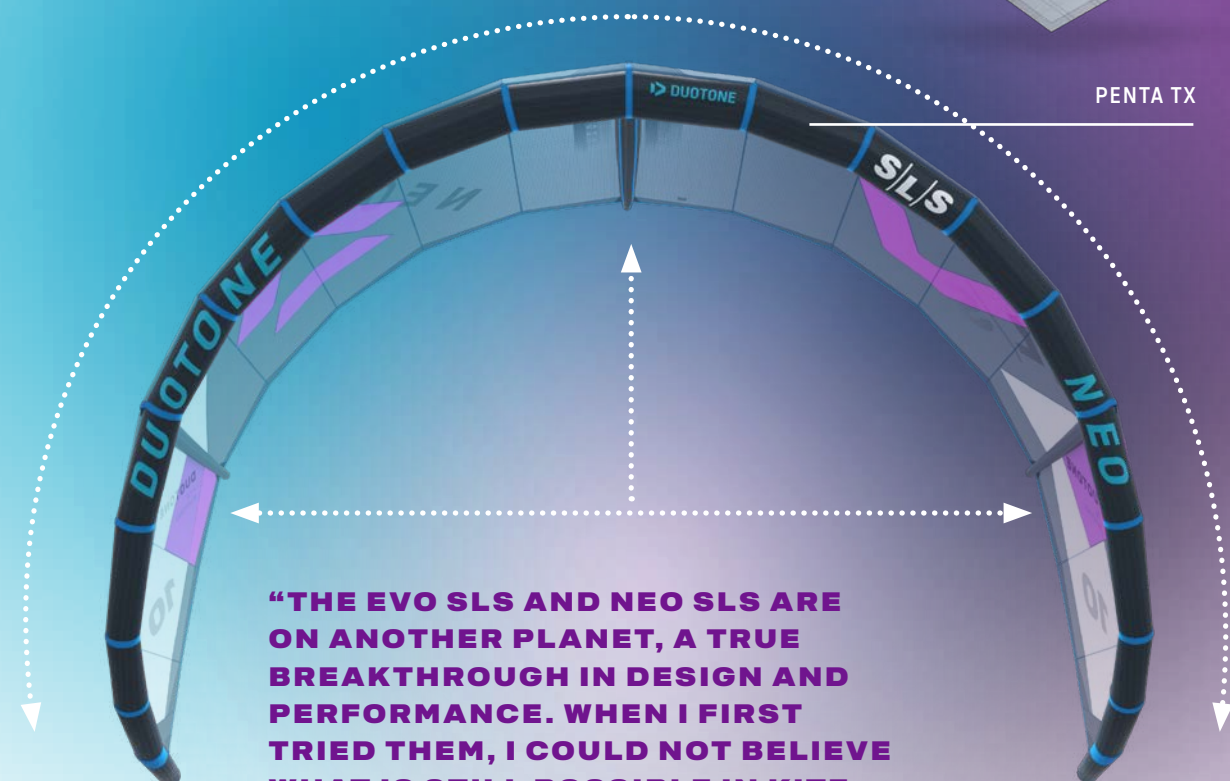

## WHY SLS?

SLS represents another dimension of innovation, product design and quality. A concept focused on the newest, most innovative materials, our SLS products are the pinnacle of visionary constructed solutions and performance driven engineering in kiteboarding.

PENTA TX

**“THE EVO SLS AND NEO SLS ARE ON ANOTHER PLANET, A TRUE BREAKTHROUGH IN DESIGN AND PERFORMANCE. WHEN I FIRST TRIED THEM, I COULD NOT BELIEVE WHAT IS STILL POSSIBLE IN KITE DEVELOPMENT.”**

AARON HADLOW

### PENTA TX

A more sporty, more precise and crisp feel of the kite.

- + 15% overall lighter
- + Up to 5 times higher tear resistance
- + 50% less elongation compared to standard dacron  
A quite stiff material, resulting in a high structural stiffness, especially recognizable in strong wind conditions, leading to less deformation of the overall structure of the kite.
- + Guarantee for a very precise timing when edging, releasing the edge and all steering impulses - the precise and reliable steering of a racing car.
- + Penta TX is used in the leading edge and center strut.

### MODULAR LIGHTWEIGHT SYSTEM

The combination of innovation and sourcing the lightest yet most durable materials, ensuring the lightest kites possible.

### INNEGRA SHIELD

**“I RIDE MY BOARDS HARD AND NEVER THOUGHT SOMETHING SO LIGHT AND SPECIAL COULD STAND THE TEST OF TIME.”**

AIRTON COZZOLINO

### SLS SURFBOARDS

The predictable feel of a polyurethane surfboard combined with liveliness, durability, dent resistance and incredible light weight.

- + Weight reduced by replacing fiberglass with Innegra
- + New innovative Innegra Shield, making SLS boards strong and resistant against dings and heel dents
- + Comfortable ride even in the choppiest conditions
- + Predictable, yet lively flex for maximum rider confidence in any conditions

**“SESSION IT, SEND IT, STOMP IT. THE JAIME SLS OPENS UP A WHOLE NEW ARENA FOR TWINTIP FREESTYLE RIDING, OLD SCHOOL AND BIG AIR. THE NEW MIX OF MATERIALS MAKES THE SLS THE LIGHTEST, STRONGEST AND SMOOTHEST RIDE I EVER EXPERIENCED.”**

LASSE WALKER

### TEXTREME INNEGRA

### SLS TWINTIPS

Light, durable, noticeable smoother and more responsive.

- + Added performance and durability without adding weight, the lightweight fibre Innegra makes it possible!
- + Incredible dampening performance, absolutely smooth in chop, allowing a cleaner edging and resulting in less knee and back fatigue
- + Very controlled and explosive pop due to less vibration compared to normal carbon boards
- + Higher impact resistance due to a carbon deck, especially great when riding boots

The legendary Neo; the world's most decorated wave kite, now has the Strong Light Superior treatment! SLS incorporates new materials and technologies across the Duotone range to create an even better performing product.

It's time to take it to the next level; the all-new Neo SLS joins the revolution in the Duotone range and will excite every experienced, ambitious and enthusiastic kiter. SLS stands for Strong Light Superior, it's the quest for perfection, and it incorporates new technologies, construction materials and techniques everywhere you see the SLS logo. For the 2021 Neo that means Penta TX, a brand new material to replace the Dacron in the kite, it's considerably lighter and offers up to five times as much tear resistance. This reduces the overall weight, and gives you a faster kite that will fly in less wind. In addition to new materials, the kite has been redesigned to maximise the performance opportunities. The new Flex Struts allow the canopy to twist even more, so the Neo SLS has become one of the most dynamic turning Neos ever since. Penta TX is coupled with the legendary

Trinity TX to create a kite that will last longer and be far more durable than a kite manufactured with traditional materials. In the waves, this reduced weight and therefore the improved drifting mean a massive spike in performance. The kite will drift down the line in a manner you couldn't have previously imagined, and light wind wave sessions will suddenly come alive. The low overall weight ensures the low end is further enhanced. Perfect for the most discerning wave riders, the best strapless freestylers and hydrofoilers, the Neo SLS is kiteboarding reinvented. The Neo SLS will ignite your soul on the water; incredible handling, unrivalled drift and a more extensive wind range. Accept no substitutes, choose the Neo SLS and bring your kiteboarding experience to the next nevel.

C C 1 0 M I N T

C C 9 D A R K G R E Y

PERFORMANCE FEATURES

- + Faster, more dynamic turning and handling due to Flex Struts and light weight construction (less accelerated mass)
- + Wider wind range and incredible low end
- + Increased drift due to less overall weight

TECHNICAL DETAILS

- + Penta TX frame construction
- + Flex Struts for more dynamic handling and steering
- + More durable, yet up to 15% / 560g lighter construction than a classic Neo, due to new material mix and Penta TX
- + Four or five line set up (5th line not included)

CHARACTERISTICS ■ NEO SLS ■ NEO

FREESTYLE UNHOOKED SLACK / POP

FREESTYLE HOOKED KITELOOP / BIG AIR / HANGTIME

REC. LINE LENGTH	20 - 22	20 - 22	20 - 22	20 - 22	22 - 24	22 - 24	22 - 24

FLEX STRUT

- + The counterpart to a stiff frame, to ensure a direct and very reactive feel of SLS kites.
- + A softer material enables the strut to bend and twist in a defined way.
- + Steering impulses are transformed smoothly and fast into turning actions

PENTA TX

- + Up to 5 times higher tear resistance
- + 50 % less elongation compare to standard dacron
- + 15 % lighter overall construction. Neo SLS is up to 560g lighter than NEO.

The best and most successful all-rounder in the Duotone range just got better, on top of the Evo, we proudly introduce the high-performance Evo SLS - an experience of flying a kite like never before! SLS incorporates new materials and technologies across the Duotone range to create an even better performing product.

Meet the Evo SLS, a kite for the experienced, ambitious and enthusiastic kiter, who will be surprised by its flying and handling characteristics. The new benchmark in performance and handling. SLS stands for Strong Light Superior, it's the quest for perfection, and it incorporates new technologies, construction materials and techniques everywhere you see the SLS logo. The Evo SLS sets a new standard for versatility, it's perfect for boosting huge airs, riding waves and tricking out some freestyle moves. If you just want to cruise then don't worry, it's ideal for that and also works really well for foiling! The R&D Team was constantly surprised the Evo SLS would never fall out of the sky, even when the foil kites were down already. The Evo SLS is the ultimate one kite does it all concept. The new construction for 2021 replaces the Dacron with Penta TX, significantly

reducing the weight of the kite while making it three times more durable. This supercharges the handling, increases the wind range and turns the Evo SLS into an experience you have never felt before with a kite. The new materials and construction make the kite much stiffer, resulting in a very agile and precise overall handling, while the reduced weight improves the low-end. The new Flex Struts allow the kite to twist like never before when you engage the bar, and this results in lightning-fast handling that is guaranteed to excite you. No matter what you decide to do with the Evo SLS, you'll be blown away by the performance, it's changing the way we think about kiteboarding. It allows you to get on the water earlier, stay out for longer and have control at your fingertips that other kites can only dream of. Maximise your ride, go all out with the new Evo SLS and connect with your kite in a way you could have only imagined before.

FLEX STRUT

- + The counterpart to a stiff frame, to ensure a direct and very reactive feel of SLS kites.
- + A softer material enables the strut to bend and twist in a defined way.
- + Steering impulses are transformed smoothly and fast into turning actions

PENTA TX

- + Up to 5 times higher tear resistance
- + 50 % less elongation
- + 15 % lighter overall construction. Evo SLS is up to 500 g lighter than Evo.

PERFORMANCE FEATURES

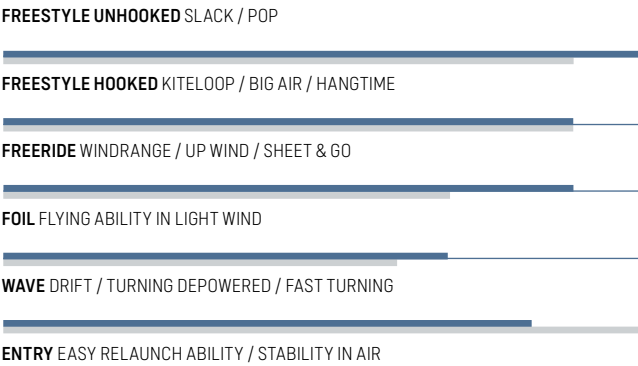

- + Aggressive lift due to direct steering and solid frame
- + Faster, more dynamic turning and handling due to Flex Struts (less weight needs to be accelerated)
- + Wider wind range due to Penta TX, solid frame and Flex Struts
- + Increased drift due to less overall weight

TECHNICAL DETAILS

- + Penta TX frame construction
- + Flex Struts for more dynamic handling and steering
- + More durable, yet up to 15 % / 500 g lighter construction than a classic Evo, due to new material mix and Penta TX
- + Pulley less bridle for responsive steering
- + Four or five line set up (5th line not included)

CHARACTERISTICS ■ EVO SLS ■ EVO

BEHIND THE DESIGN WITH RALF GRÖSEL

Anything that operates at the top of its game takes time to develop. The DICE has been a global success since day one, bridging the gap between the Vegas and the Evo. The sport has evolved and now, the extreme, Red Bull King of the Air competition in Cape Town, South Africa, is the only crown the world's best are chasing. Every athlete has a career trajectory that requires navigating several barriers and facilitators of performance, so too does designing a kite fit for the job. The concept of the DICE has always been for more experienced multi-disciplinary riders, edging towards the extreme.

However, already in 2019, riders like Lasse Walker and Aaron Hadlow couldn't find exactly what they needed for mega loops and consistency when riding in 40knts plus, which kicked off the process to completely redesign the DICE. The 2020 DICE made huge steps and became our extreme focused kite with a commercial following. The magazine reviews mentioned slight improvements, which was true when applied to a normal range of customers - but put to the extreme and in the hands of experienced riders and

DUOTONE

World Champions, the improvements were massive. There's no such thing as minor design changes when working on such a high-performance kite, so the 2021 DICE remains and Ralf Grösel is here to tell us all about his boundary breaking design.

The 2021 Dice competes on the elite stage in both the freestyle world tour and the King of the Air. Our redesign in 2020 reimagined the DICE as the legitimate example of extreme versatility. Such progress has had an incredible impact on the 2021 Duotone product portfolio, with clear separation between the models.

The Evo; all-round high performance, and the Vegas; younger generation pushing a niche discipline of the sport, and the Dice; agile, reactive, huge jumps, powerful loops, unhooked riding.

**How did you get to this point?**  
The Dice has always been accessible for a wider group and very commercial. But, extreme riders like Lasse and Aaron wanted something that could boost higher, achieve more depth in the loop because of the way it recovers and handle the harshest conditions in the world. The complete redesign was influenced by these riders, and the challenge was to remain loyal to the foundations of the DICE, retaining accessibility for the experienced and adventurous riders.

**What was the outcome?**  
The Dice is totally at home on the edge of all its parameters and in control throughout. There's no point in being the hero who can fly a crazy, unpredictable kite. You are the hero when you can fly

higher and rider cleaner than your competitor. The Dice allows for that.

**Can you breakdown the purpose of the main modules that make the final product?**  
The reduction in weight improves flying characteristics. The bridle reconfiguration and pulley-less design offers precise feedback. New materials play a huge part for 2021. Lighter in weight, its construction and processing, provides the ability for a much more solid frame construction. The combination of the two makes the DICE more responsive, super stable in gusty or high wind conditions and consistency through the wind range.

**Can you put the DICE's extreme performance into context?**  
You only need to watch Aaron and Lasse in action and see how their influence translates into performance. The Dice is explosive, fast and agile. Loops are full power and engaged throughout every aspect of the circumference. Its reactive response to your input and supreme drifting abilities even allows for wave sessions. There's slack after pop and due to the stiff frame, the DICE can drive itself as you stomp your latest tricks.

**Designed for big air, powerful lift, extreme kite loops and with impressive freestyle performance, the all-new Dice is the perfect kite for the rider who wants to go big!**

The new Dice has been designed by Ralf Grösel with the influence of Aaron Hadlow and Lasse Walker. The goal was to make a kite that would compete at the very top level of the King Of The Air, offering huge jumps and powerful loops. At the same time, the team wanted it to perform for unhooked tricks too, making it a really versatile performer. This year the weight of the kite has been reduced to improve the flying characteristics, and the bridle has been tuned a lot with the pulley less design offering a very precise feel. These design changes for 2021 combine modern materials with an absolutely solid frame construction.

This helps the kite to react very precise and responsive, yet being superstable in gusty or high wind conditions. Aaron and Lasse really wanted to maximise the jumping capabilities, and the fast turning nature makes it incredibly reactive and gives it an explosive launch off the water. By tuning the bridle and wingtips, the turning speed was increased while ensuring the loops are full power with plenty of sideways pull in the air. For freestyle the Dice delivers a good amount of slack just after you pop, this allows you to throw the latest tricks with ease. The fast nature of the handling also lends the Dice well

to wave riding, and the reduced weight improves the drifting capabilities. If you want a really high-performance all-round kite, then the Dice is the choice for you. No matter what the conditions it is ready to go and when the conditions get wild, then the Dice will be there ready to help you fly!

CC 6 PURPLE

# REBEL

DUOTONE

The best freeride kite on the market is back, and it's ready to redefine the boundaries of hangtime and kiteboarding as you know it.

The Rebel is a kite that has defined a generation of riders; it's the best freeride kite on the market and the perfect tool to help you improve your riding. More than that though the Rebel was made for flying, no other kite in the Duotone range offers as much hangtime and float when you are jumping. Load up the edge and sheet in on take off for an experience like no other. This year, Flex Struts have been incorporated into the design; these allow the kite to twist when you input steering response through the bar. This has made the Rebel much faster through the turn and more dynamic than in previous years. The kite feels sportier, more like a race car, finely tuned and ready for action. The wind range on the Rebel

FLEX STRUT

- + The counterpart to a stiff frame, to ensure a direct and very reactive feel of SLS kites.
- + A softer material enables the strut to bend and twist in a defined way.
- + Steering impulses are transformed smoothly and fast into turning actions

is outstanding, the five-strut design keeps the shape stable in the air, so at the top end there is almost no limit, the jumps just get bigger, and the hangtime lasts longer. With several trim options on the bar, the Rebel is also very versatile, wave and freeride settings you can set the kite up for the conditions of the day and how you want it to fly. A familiar Sheet and Go feeling through the bar makes it's a great kite for beginners and riders wanting to improve the way they ride. From your very first jumps to the biggest airs you could possibly imagine, the Rebel is the perfect partner every step of the way. Get ready for take-off and experience flying in a way you can only get with the Rebel!

## WHAT MAKES TEXTREME INNEGRA SO SPECIAL?

The mix of Carbon and Innegra makes the construction of the Duotone SLS Twintip series absolutely unique. Innegra itself is a high performance fiber used in composite and textile applications which can be converted into many different reinforcements in Twintip design, offering smooth dampening and enhanced breaking resistance. Combined with carbon you get a lightweight, but durable board offering incredible pop and precise feedback. This material combination produces exceptional Freeride, Freestyle and Wakestyle Twintips that feel just at home at your local spot or in a final heat on the GKA Freestyle Tour.

F Custom Glassfibre Board

F Carbon Board

F Textreme Innegra Board

## DUOTONE

## TWINTIPS

### HOW DOES THIS TRANSLATE INTO THE 2021 SLS LINE OF TWINTIPS?

Textreme Innegra combined with our different layups and new shapes, offers the desired option for every discipline in kiteboarding. Whether riding at your local spot or shredding the final heat of the GKA Freestyle Tour, the fine-tuned abilities of Textreme Innegra has a reaction to every action that will further your progression and enhance every session.

JAIME SLS

#### Precise edging and explosive, predictable pop.

The new construction with Innegra, has significantly enhanced the performance of the **Jaime SLS**. The key components of Innegra are its strength and stiffness, as well as its ability to eliminate vibrations. Overall, this delivers easier and more precise upwind capabilities, carving, loading up for a jump, holding the edge and timing of release.

SELECT SLS

SOLEIL SLS

#### Fast and comfortable.

Reach top speeds in 1st class comfort with the **Select SLS**. Slicing through rough and choppy conditions, it's especially kind on your knees and back. But don't be fooled, this comfortable Twintip is ready for your bag of tricks anytime, anywhere. For the women, the **Soleil SLS** has complete control, comfort and epic performance through both Freeriding and Freestyle.

SPIKE SLS

ULTRASPIKE SLS

#### Light wind machines.

Introducing the **Spike SLS** and **Ultra Spike SLS**. Lightwind kiteboarding relies on construction, so naturally our designers gave these models some special SLS treatment. No wind will never be an excuse.

## BY SKY SOLBACH

We're constantly looking for ways to improve our surfboard construction and in our product descriptions we often talk about the challenges involved in finding a good balance between lightweight, durability and feel/flex and how it's easy to make a board strong and stiff or light and fragile. We've been quite happy with the way our Light Team Construction has performed over time, utilizing the cork shock absorber as a damper, and we've honestly struggled with several attempts behind the scenes to make any substantial improvements when experimenting with alternative damping materials as they simply could not match the innate technical qualities of cork. These experiences led us to start looking into alternative materials to replace or compliment the fiberglass laminate itself. Since we have quite some years of experience now using Innegra as a damper to tone down the rapid reflex of our carbon twin tips, we figured we'd give it a try on our surfboards as well. Throughout the process of development of several dozen prototypes, we

learned about the many benefits of using Innegra cloth to replace some layers of fiberglass. Firstly, it's stronger by weight than fiberglass, resulting in a significant weight reduction. Additionally, it serves as a damper to give the boards a more forgiving feel, which is especially noticeable in the harsh, choppy conditions we often have in kitesurfing. Finally, because the material itself is less brittle than fiberglass, the boards are more durable, especially from impacts that might crack and splinter a fiberglass laminate. The Innegra simply flexes and absorbs the shock, which makes the boards much less prone to dings and cracks – And that's why we call it the "Innegra Shield", because it really does shield the board from a lot of damage you would normally get on a typical board. So, basically, we have managed to make the boards a bit lighter, more durable AND have a better feel and flex which really ticks all the boxes in our criteria for a high performance kite surfboard that will stand up to the rigors of every day kitesurfing.

# INNEGRA SHIELD

INNEGRA SHIELD

## INNEGRA SHIELD

The innovative Innegra Shield vastly increases durability and impact resistance, making the SLS boards significantly more resilient against cracks, dings and heel dents. Weight is reduced by replacing fiberglass with lightweight Innegra fiber. The impressive damping properties of Innegra reduce resonance, ensuring a smooth ride even in the choppiest conditions.

Traditional polyurethane foam surfboards have very low frequency vibration and excellent damping properties, but very slow reflex, resulting in a loss of energy and “spring” through turns. EPS foam/epoxy boards on the other hand have excellent reflex and spring, but often feel very harsh due to their high frequency vibration. Our Innegra shield has the quick reflex and spring of an epoxy board with the low frequency vibrational damping of PU, combining the highest level of performance with the smoothest ride possible.

- + Innegra shield boards are up to 100g lighter, yet more durable and more dent resistant
- + PU foam boards offer excellent damping, but lack the quick reflex of EPS/epoxy.
- + EPS/epoxy boards have the quickest and most explosive reflex, but feel too harsh.
- + Innegra shield combines the quick reflex of EPS/epoxy with the excellent damping and comfort of PU.

## SESSION SLS

The Session SLS is a brand new shape that is more or less a further development of the Pro Session with some key differences. The idea was to make it a bit more lively and fun to ride when the waves are not huge and barreling. It still works great in bigger waves and when riding really fast, but the increased width and rounder outline frees it up a bit to turn tight in the pocket on smaller waves, while still offering tons of grip and drive in bigger waves. Basically, the Session remains the carving machine of our lineup, but now allows you to draw tighter arcs when the waves are not huge. I've been having a blast riding this board in really windy conditions when I want control at speed, but still want the ability to do tight snaps like I do on the WAM.

## FISH SLS

The Pro Fish was my go-to board last season in almost any conditions – especially light wind, and we got so much great feedback and praise from our team riders and customers. The ease of use, stability and overall fun of this design made me fall in love all over again with kitesurfing in light wind and small waves. However, one thing that we felt was missing was the ability to throw the board up into the lip on a really short, steep transition of a small wave. Together with the feedback of our team, I set about trying to loosen the board up to gain this key ability for small waves. What we ended up with, is a clearly more loose and more playful version of the Pro Fish – The new Fish SLS! It has a more pulled-in tail template and modified tail rocker that allows the board to pivot tighter in small waves and brings a new flare to this ridiculously fun small wave slasher.

# NEW SLS SHAPES

## VOKE SLS

The Voke SLS is the latest brainchild of World Champ and strapless freestyle wizard Airton Cozzolino. Airton found the Pro Voke was unbeatable for speed, power and pop in the right conditions, but over the course of last season found that he would sometimes get better pop (takeoffs) with the Pro Whip when being in really choppy conditions. He attributed this to the narrower nose and the slightly increased rocker, allowing the Whip to fit into the curve of the chop better than the Pro Voke. Although landings and speed were not as good on the Whip, he found in certain conditions that the trade-off was worth riding the Whip. With this feedback in mind, I made him several mash-up prototypes with Pro Whip and Pro Voke designs elements and because Airton was so clear about what he wanted, we landed on a winning design fairly quickly. The nose got slightly narrower, the rocker got modified and we also made the rails slightly more boxy, to give the board a bit more power and release in lighter wind. You can expect a hardcore strapless freestyle machine with all the latest updates and tweaks from the wizard himself.

# POWER TO THE YOUTH

"We've thrown around the idea of making grom surfboards for some years now, but it's always come down to the lack of demand really. Just in the last year or two, I've suddenly had quite a few kids contacting me directly through social media asking for small kite surfboards. I think most of that demand can be directly attributed to our team riders on the GKA Tour inspiring these young kids to take up strapless freestyle or kite surfing. We've seen this demand from groms for some years now in the wakestyle scene, but now that surfing and strapless freestyle has really come of age, the kids want to ride like their idols."

SKY SOLBACH

## JAIME 128

The Jaime 128 is a very special board to us, as a lot of our young groms from our families will use it as their very first board. First time ever, this is not just a small Jaime or a Soleil which the Groms have to use, the Jaime 128 is made especially for a Grom's age and weight, guaranteeing the most fun and superfast progress. Sorry Mum n Dad, you can't borrow this one!!

ITEM NO 44210-3420

## WHIP SLS 4'9

This board is essentially just a scaled down version of the bigger sizes. It's our most popular model amongst team riders and customer because it rips in almost any kind of waves and is great for strapless freestyle, which I think is where we're seeing the most demand from young riders because they can use this board on flat water or waves. The new 4'9" is perfect for small riders because it's super thin and compact.

ITEM NO 44210-3409

## WAM SLS 5'3

My goal in designing the Wam was to give our team riders the ultimate high-performance board for small to medium waves. This new 5'3" will give smaller riders the same tool to advance their kitesurfing to the highest level. We have relentlessly tested this design in waves all around the world and given it our stamp of approval for just about any conditions that warrant high performance kitesurfing.

ITEM NO 44210-3406

GROM

**Kite lines connect and communicate the power in your kite, into your hands.  
Putting our lives in our lines, they are crucial for safe, long lasting and enjoyable sessions.**

As kiteboarders, we want and need our lines to endure the toughest conditions and perform perfectly time after time. Our goal each year is to improve and evolve the quality of our products. For 2021, we have completely redesigned our lines from the ground up and are proud to introduce the brand new DUOTONE FLITE99 Kite Lines.

FLITE99 uses Monofil; a unique material that prevents bending, kinking of the line

#### **Monofil in a nutshell**

The monofilament is a plastic thread, similar to that of a toothbrush bristle. The high degree of stiffness allows for movement, restored to its usual strong state.

#### **EXHIBIT A:**

We made a kink in both the Blue and grey lines.

- + The blue line, featuring a black Monofilament, returned to its original state without force.
- + The grey line had to be manually manoeuvred, clearly highlighting a potential break-point.

#### **More than Monofil**

The new base material, Dyneema® SK99, is the best, high performance raw material fiber available for flying lines. We run them through our "Magic Machine" at the Teufelberger factory which takes the woven line and heats, stretches, impregnates, colors and coats them using a new special "V2" coating. The main benefit is the increased abrasion shield that combats wear and tear, as well as leaving the lines smooth for quick and easy line setup.

#### **PERFORMANCE FEATURES**

- + Highest Dyneema Quality SK 99
- + Backlines turquoise / Frontlines grey
- + 12 % higher breaking load
- + 15 % less elongation
- + 6,5 % less wind exposed area due to a decreased diameter
- + New, more durable Coating

#### **TECHNICAL DETAILS:**

- + Flite 99
- + Ø: 1,3 mm
- + Breaking load: 380 kg
- + Elongation: 0,85 % at 80 kg
- + Dyneema SK99
- + 12 strand Braid

## WAKESTYLE KIT

4 4 2 0 0 - 8 1 5 1

#### KEY FEATURES

- + Long leash included
- + Huge loop for easy unhooking and hooking back in
- + Long neoprene covered leash gives maximum freedom to move, comfort and prevents injuries

## FREESTYLE KIT

4 4 2 0 0 - 8 1 2 0

#### KEY FEATURES

- + Long leash included
- + Large loop for easy unhooking and hooking back in
- + Long, soft, neoprene covered leash for easy and comfortable passing of the bar

## FREERIDE KIT

4 4 2 0 0 - 8 1 1 9

#### KEY FEATURES

- + Short leash included
- + Small chicken loop for a bigger depower stroke
- + Shorter leash for less tangling
- + Not designed for unhooking

## ROPE HARNESS KIT

4 4 2 0 0 - 8 1 2 1

#### KEY FEATURES

- + Short leash included
- + Smooth sliding of the rope in combination with rope harnesses, no wear on the rope
- + Direct connection to the Iron Heart results in a bigger depower stroke
- + No irritating chicken dig

	CARVING IN MEDIUM TO BIG WAVES	ALL ROUNDER SMALL TO MEDIUM WAVES	SMALL TO MEDIUM WAVES / STRAPLESS FREESTYLE	STRAPLESS FREESTYLE
PRODUCT PROFILE	The Session SLS got a major update for 2021. It still excels bigger waves, but we've injected even more performance and speed into this design for when the waves are not pumping. With it's rounded pin tail it is definitely still a carving machine in any size waves, but with the new slightly wider center point and pulled in nose and tail it has become more maneuverable and agile. If you want an all rounder that gives you maximum control and in all conditions and stays engaged and connected through blazing fast carves, the session is the one for you.			
	The Wam remains on the cutting edge of high performance kite surfing. This wide-point-forward design puts width and volume under the front foot where you need it to carry maximum speed and flow. The Wam SLS is the embodiment of the high performance squash-tail kite-surfboard and is at home in everything from small onshore waves to pumping down-the-line surf. The WAM SLS is the go-to high performance kite-surfboard for our team riders competing on the GKA world tour because of it's fast, lively and agile feel that offers a dynamic and exciting ride no matter the conditions.			
PERFORMANCE FEATURES	+ Best carving + Best drive and grip + Best big wave board	+ Traditional all rounder + Tight snaps + Contest board of choice + Good control	+ High performance small wave / freestyle board + Snappy top turns + Incredible speed generation	+ Strapless Freestyle machine + Fast and stable + Explosive pop for airs + Best landings
	+ Innegra Shield + Cork Shock Absorber 2.0 + Carbon Beam + Foot strap inserts for big waves + Tri/quad fin option	+ Innegra Shield + Cork Shock Absorber 2.0 + Carbon Beam	+ Innegra Shield + Cork Shock Absorber 2.0 + Carbon Beam	+ Innegra Shield + Cork Shock Absorber 2.0 + Carbon Beam

	SMALLER WAVES / CLASSIC SURF	CROSS-OVER SURF AND FOIL	STRAPLESS PURE SURF	SMALL TO MEDIUM WAVES / STRAPLESS FREESTYLE
PRODUCT PROFILE	The Fish SLS excels in small waves and light wind and for 2021 we modified the outline curve to increase the Fish's maneuverability and agility in small waves. The Fish SLS is a high performance machine that will handle even when the waves get bigger that is both easy and forgiving and also very performance-oriented. From 1 foot to 6 foot, once you ride the Pro Fish you'll be spoilt forever.			
	The Hybrid SLS is based on the new whip shape, but with a modified bottom channel and a foil attachment. The Hybrid SLS can be used as a kitesurf board or a foil board. Our unique four-point foil mount is lighter than conventional tracks and still allows the board to maintain decent flex in the mounting area when used as a surf board. An excellent small to medium wave kitesurfboard or a allround ffree ride foil board, the Hybrid SLS makes an excellent travel board to cover all your needs no matter the conditions.			
PERFORMANCE FEATURES	+ Small wave slayer + Carries speed with little kite power + Great all rounder with easy performance	+ One for all - surf and foil + Small to medium wave surfboard + Compact shape	+ All round high performance board + Controlled bottom turns + Explosive top turns	+ High performance small wave / freestyle board + Snappy top turns + Incredible speed generation

DUOTONE ACADEMY

# IT'S TIME TO REACH THE NEXT LEVEL!

We're stoked and happy the kite community is eager to get better and better!!  
Thousands of kitesurfers have downloaded the app and continuously watch and download new tricks, thank you!!

## WHATS NEW:

- + New wave lessons!
- + We're happy and proud our team riders take responsibility to directly get in contact with App users, give tips, help to achieve goals, make better kitesurfers!
- + Super Coaches have been chosen! Our most experienced coaches, willing to help from going upwind to the most complex unhooked tricks or strapless freestyle! Super Coaches will help you to reach the next level!!  
**Jeremie Tronet:** Beginner / Hooked / Basic Unhooked / Foil  
**Colleen Carroll:** Beginner / Hooked  
**Sebastian Ribeiro:** Strapless / Wave  
**Aaron Hadlow:** Unhooked  
**Lasse Walker:** Hooked / Unhooked  
**Jerome Bonieux:** Foil
