

# HotRods. Industry Leading Pop and Response

Invented by Rome, HotRods are thin rods milled into our boards' cores starting from the insert pack and extending out towards the nose or tail. Designed to provide next level explosive pop, power and response.

Responsive boards ride better, plain and simple. We use HotRods to create responsive, lively boards so riders can ollie higher, land deeper and have quicker reactions to whatever they're riding. Each board model has a different HotRod configuration designed to create a dynamic flex with explosive pop and response.

### **HOTRODS ADD MORE POP TO YOUR RIDE**

### Load.

When you set-up to ollie or make a quick adjustment, the energy is loaded directly under your boot.

### Transfer.

As the movement begins, the HotRods react and transfer the loaded energy throughout the board.

### Pop.

The HotRods spread the energy throughout the board, effectively boosting the motion to create next level pop, power and responsiveness.

Higher ollies. Quicker turns. Hyper-responsive riding. HotRods.

# HotRods. Next Level Pop and Response

HotRods are used in a variety of configurations to enhance our boards pop and responsiveness. Each configuration compliments the board's intended riding style and shape by enhancing the responsiveness where needed.

### **CARBON HOTROD**

Super responsive and powerfully snappy

All-mountain stability at speeds and with turn initiation

### Ollie power, stability exiting turns

and reliable back-seat riding

### **BAMBOO HOTROD**

Pressable and playful with plenty of pop

### TWIN DOUBLE-V

Freestyle oriented responsiveness and maximum ollie power

Torsional flexibility, pressable yet reliable all-mountain charging

### **TWIN DOUBLE** Stability, versatility and up-hill sure footedness

# Omega. Unleash the Power of Carbon

Omegas are sleeves of carbon that sit around HotRods themselves, built in the shape of an Omega. We use Omega's to enhance the pop and response of HotRods; think of them as turbo boosters for a board's flex pattern.

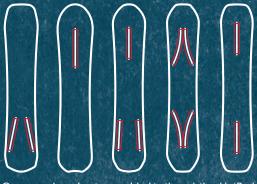

### CARBON OMEGA HOTROD

### **BAMBOO OMEGA HOTROD**

Omegas are sheets of carbon wrapped around HotRods for additional snap and response

Omega carbon sheets are added to the existing HotRod

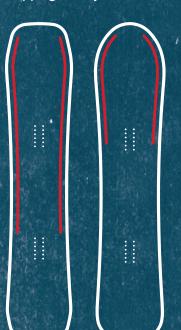

## Flax The Lightweight Super Fiber

Flax is a natural, incredibly versatile, lightweight textile material that we use in our boards. Depending on how the flax material is used, it has advanced impact absorption properties or the ability to create rigidity and strengthen specific regions of a board.

Flaximum power baby!

### **FLAX WALLS**

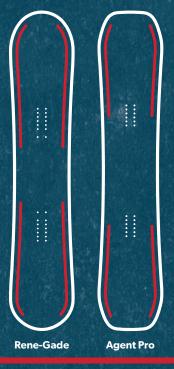

Flax Walls are an I-Beam shaped sidewall reinforcement. This natural, low-density material has advanced strengthening properties. When used in a vertical arrangement between the core and the sidewall, Flax Walls create rigidity and stability. We use strategic mapping to inlay Flax Walls in both Directional and Twin configurations.

**Ravine Select** 

### **DIRECTIONAL FLAX WALLS**

Directional Flax Walls are used in the noses of all-mountain boards to provide additional stability and power to handle the terrain and impact associated with all-mountain riding.

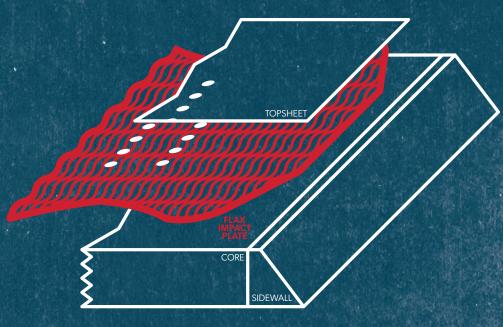

# **FLAX WALLS**

Twin Flax Walls are used in freestyle-oriented boards to add strength to the boards nose and tail for additional power to load ollies and absorb deep landings while still being able to lock into presses.

### **FLAX IMPACT PLATES**

Flax Impact plates are a woven flax mat housed around the board's insert pack designed to dampen impact and make boards more durable. Flax Impact Plates help absorb impact from deep landings or variable conditions and additional strength without dramatically changing the board's flex pattern.

# Diamond 3D. A Smooth Ride No Matter the Conditions

Our Diamond 3D is designed for edge catch free riding and crazy float on deep days. The secret sauce of Diamond 3D is a wide, flat running section in the middle of the board, with a gradual three-dimensional curvature. This means the board is stable when riding flat and initiates turns with ease while floating like a yacht in deep snow.

### **DIRECTIONAL DIAMOND 3D**

Found only in the board's nose, Directional Diamond 3D is used on our directional boards and designed to help float in deep snow and crank

long, smooth turns.

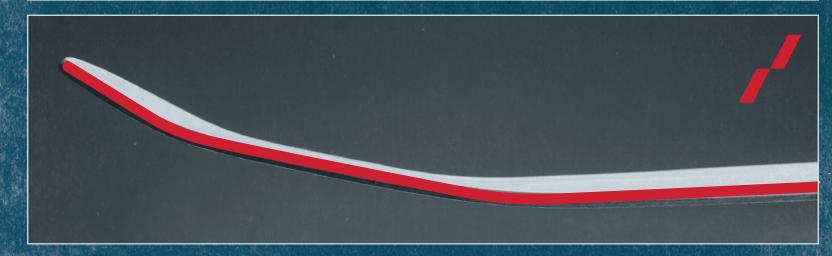

### **TWIN DIAMOND 3D**

For progression-oriented boards, we use Twin Diamond 3D to add 3D uplift to both the nose and the tail to create a catch-free riding experience.

# Double Kick. Built to Press

Used on freestyle-oriented boards, Double Kick is an aggressive, two-part rise in the boards nose and tail. Designed for locked-in presses, torsional stability and riding away from sketchy landings.

**Agent Pro** 

Hype

# Camber and Shape.

### FREE-THE-RIDE

Designed for all-mountain prowess and float in the deep. Rockered in the nose, flat under the front foot, with a positive cambered tail

### **FUSION CAMBER**

Positive Camber with small pockets of rocker at the contact points; the modern go-to for all-mountain performance

### CONTACT ROCKER

Flat camber between the bindings with rocker outside the bindings; smooth flexing and pressable.

### STAY POSITIVE CAMBER

Powerful and predictable, tried-and-true camber.

### **SHAPING**

### **DIRECTIONAL**

Boards with significantly longer noses than tails, typically featuring taper to help keep them nimble and floating in deep snow. Directional boards feature camber profiles that are oriented for all-mountain riding.

### **DIRECTIONAL TWIN**

symmetrical camber profiles. Directional Twin boards are well-suited for riding switch and

Boards built with fully symmetrical specs; sidecuts, flex patterns and nose and tail lengths. True twin boards are great for freestyle riding and progression.

# HeelWrap Pro. NEW

HeelWrap Pro Platform is our new offering designed for fool-proof simplicity with a supportive ride-anything flex. This design features an adjustable aluminum heel hoop with two points of connection to the baseplate. This allows the baseplate to interact directly with the board to help absorb chatter while still providing plenty of response. The HeelWrap Pro is a dependably smooth ride.

# AsymWrap. — FullWrap.

Our game changer of a chassis that revolutionized the idea of connected-comfort. The AsymWrap heelhoop features three connection points to the base allowing for a surfy ride and plenty of board feel without sacrificing tweak or edge-to-edge response.

Our bombproof platform, the FullWrap heelhoop chassis has three connection points to the baseplate for maximum energy transfer and pure connected power. Built with more lateral support than the Asym platform, FullWrap bindings are designed for advanced stability, durability and power.

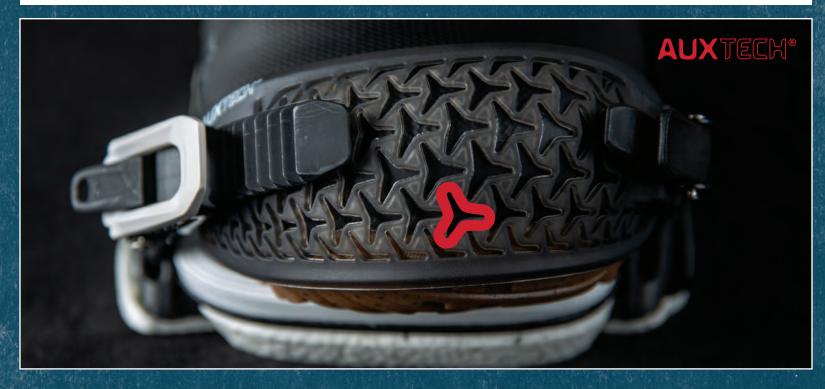

# AuxTech<sup>®</sup> Hinged Patterns for Next Level Connected-Comfort

Auxetic patterns are geometric patterns that become thicker perpendicularly when stretched. Think of them as a network of tiny hinges that when pressure is applied, they actually expand and open. This creates a more direct connection to the boot. Better surface area pressure distribution with an ergonomic shape means a better connection overall.

Better grip, increased durability and better connected-comfort, that's AUXTECH®.

# DuraCush<sup>™</sup> Futuristic Comfort and Impact Absorption

DuraCush™ is an expanded thermoplastic polyurethane material, or E-TPU, used in our SubBase pads and on our footbeds to provide advanced chatter absorption and make our bindings as comfortable as possible.

Because of its unique thermo-expansion molding process, DuraCush™ is hyper-resistant to cold temperatures, whereas traditional materials often stiffen and negatively impact riding on the days when it matters most. No matter the temperature, DuraCush™ maintains its impact absorption properties for chatter-free riding, more efficient energy transfer and an overall smoother ride.

# Straps.

### UltraFlex Pro ankle strap NEW

New for this season, the UltraFlex Pro ankle straps are the next generation of the legendary AuxTech® strap family. Instead of the traditional closed edge on a strap, the UltraFlex Pro straps feature an open 3D auxetic edge. This means when the strap is tightened it has unprecedented ability to open and stretch, creating a more even distribution of pressure on the boot. To compliment that open edge, we overmold the material to a Hytrel® spine, this creates a supportive backbone in the strap. This overmolding process creates a dynamically powerful strap that's equal parts hyper-reactive and plush.

Models featured on: Black Label, Katana, Cleaver, D.O.D.

### **UltraFlex ankle strap**

New for the season, the UltraFlex ankle straps powered by AuxTech® are designed. for new levels of locked-in comfort and support. What makes the UltraFlex straps so special is the new open 3D auxetic edge instead of a traditional closed edge design. This open edge creates an even pressure distribution on the boot while still allowing for a full range of tweakability that freestyle riding craves.

Models featured on: 390 Boss, Brass

### **ProFlex ankle strap**

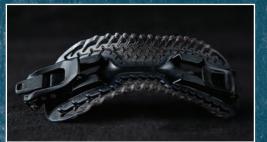

The ProFlex ankle strap is the iconic AuxTech® powered strap found on the most versatile and reliable bindings in the game. This one-piece strap is durable, snug and compliments every riding style.

Models featured on: Vice, Guild, Trace, Hvdra

### **PureFlex ankle strap**

The PureFlex ankle strap is a lightweight minimalist strap built for riders of every ability level. This one-piece strap has a minimal footprint on the boot but plenty of locked-in hold.

Models featured on: Crux, Flare, Ace

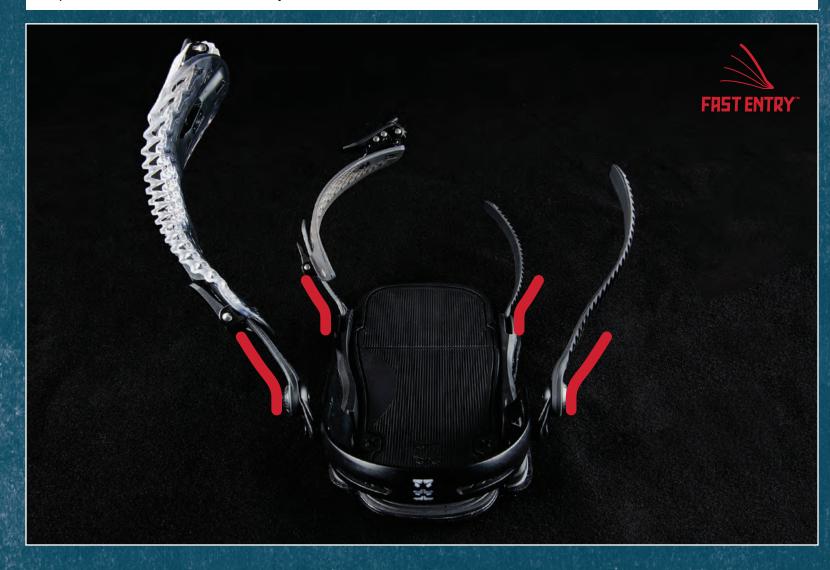

# **Fast Entry.**

Our bindings feature FastEntry Technology for super quick and easy entry into the binding. The pre-curved ladder on the ankle and toe straps are designed to pop open and help keep the straps out of your way while getting your boot into the binding.

Strap in faster and easier thanks to FastEntry!

# **BombProof Buckles.**

Our BombProof Buckles are a one-piece forged aluminum construction for better grip and durability.

Built with wider stance teeth area for more engagement, this makes for easier ratcheting and increased protection from wear and tear to your ladder straps.

**BINDING TECHNOLO** 

# PivotMount.

A Rome exclusive binding innovation, PivotMounts are small adjustable pieces that allow riders to move the position of their ankle straps on their boots. The higher up on your boot the ankle strap sits, the more power and turn initiation. The lower the strap goes, the more surfy and tweakable your riding will be.

### **Highback Rotation.**

Designed so riders can adjust their highbacks to mirror the angle of their heelside edge for maximum power transfer.

### **Highback Canting.**

Built so that riders can adjust the angle of their highback to mirror the angle of their lower leg for increased connection and stability.

# Adjustable Baseplate.

Created to help fit a wider range of boot models and sizes.

### **Composite Construction.**

Our highbacks and baseplates are made of a variety of materials. These composites are all designed to flex differently and provide different levels of response and tweakability.

### PowerGraft Highback. POWERGRAFT

This industry first design features a Polystrand  $^{\text{TM}}$  layered composite fiber upper, overmolded into a nylon lower region for next level heelside power, without sacrificing torsional tweakability.

M/L

We designed our boot collection to work with specific BOA® Fit Systems to create seamless connections and easy on-the-fly adjustability. We use three different lacing BOA® Fit Systems to complement our boots intended flex and riding style.

### **Focus BOA**

H-Series Upper Dial M-Series Forefoot Dia

Dual zone lacing where the upper and lower zones overlap at the ankle for maximum adjustability, support and connected-comfort.

### **Hybrid Heel Lock BOA** Single Dial BOA

M-Series Heel Lock Dial

Advanced heel hold and ankle support to complement hybrid lacing systems.

H-Series Tongue Dial

Quick adjustments and snug fit thanks to the Coiler™ technology system.

### **TX3 Laces**

Designed with slightly more give than wire laces, TX3 Laces are a textile lace which is better for impact and provides a 'true to riding' flex.

# Outsoles.

Our outsoles are designed to provide maximum traction, compliment a boots intended flex pattern and increase its lifespan.

### **GripLight Outsole** with **Vibram**

Our most rugged and durable outsole built for advanced traction and sturdy multiple season support thanks to Vibram IceTrek 2.0 compound.

### **GripFlex Outsole**

A medium to responsive flexing outsole, featuring strategic lugs for traction.

### **AceFlex Outsole**

Lightweight, smooth flexing durable one-piece rubber outsole with strategic lugs for traction.

### **MiniShred Outsole**

One-piece rubber outsole with a softer flex with maximum traction.

# Liners.

We design our fully heat moldable liners for maximum comfort with locked-in hold and season long performance.

### **Ultralon F.I.T. Liner**

Our most plush and customizable liner for advanced fit that refuses to pack-out Built with dual density Ultralon Foam for maximum performance and fit longevity, our SkateCuff 3D molded ankle support system and Ultra Footbeds with dual density foam for targeted heel and arch support.

### **Pro F.I.T. Liner**

Fully heat moldable for maximum snug fit and dialed-in performance. Built with our SkateCuff 3D ankle support system, expandable toe box and Pro Footbeds for support and out-of-the-box comfort.

### **Rad F.I.T. Liner**

Plush and supportive, this fully heat moldable liner features SkateCuff 3D, an expandable toe box, TriZone lining and Rad Foambeds for comfort.

### **Ultralon Foam**

Ultralon Foam is a space-age material that provides advanced heat moldability with unprecedented levels of comfort and fit. Our Ultralon F.I.T. liners use a mixture of two different densities of Ultralon Foam to create a liner that is simultaneously resistant to packing out and insanely comfortable. The inner layer is plush and cozy, so your feet always feel snug. The second layer provides maximum support, heat moldable customization and performance to the boot.

# Materials.

### **DuraFit Shell**

This innovative welded TPU material provides next level waterproofing, abrasion resistance and helps keep the boots overall structure and flex pattern season after season.

### **Inner Shell Harness**

Easy to adjust cinch and pull design, built so riders can quickly tighten the shell and liner together.
