KITEBOARDING

WHAT'S NEW WHAT'S NEW WHAT'S NEW

We're living in fast changing times, where the future is quite hard to predict yet offering a lot of opportunities. The biggest challenge in the last 12 months for Boards&More have been problems in the supply chain. Starting with shortage of raw materials, Covid shutdowns in factories and massive delays in shipments, made reliable planning impossible. Despite these problems, Duotone has reacted most flexible and shown a double-digit growth in the last 12 month. A pretty good success by every single employee involved. To safely steer through choppy waters, my key has always been a very agile management and a lot of communication.

Duotone Kiteboarding has always been on the forefront of innovation, now with three product segments, Originals, SLS and D/LAB, both bars with a brand-new update, a really cool split board, a youth Twintip and a youth Surfboard and more. Personally, for me the most impressive products in 2023 are the D/LAB kites. On my last holiday in Mauritius, I had the pleasure to use a Neo D/LAB pre-production kite. To be honest before using it, it was difficult for me to imagine a D/LAB Neo is really better compared to a SLS Neo - not even talking about the extra

costs. After 10 days on D/LAB I just can say, I would definitely spend the money! It turns faster, drifts much better and has a better low end. I for sure had some sessions in One Eye, when the normal kite wouldn't have worked. Truly magical sessions.

Regarding the development of Duotone Kiteboarding for 2023 I believe 2023 will be a quite challenging year, we have to increase prices and at least at the moment, there is more than enough gear in the market. On the other hand, we still struggle to fulfill the full demand of the market for Duotone kites, which is a good sign for me that our products are highly requested. I think that our SLS & D/LAB technology really make a difference in performance, which gives us an advantage over the competition

Duotone is having a huge revival of the Young Blood Camp. For Duotone the future of kiting is mandatory to get young people motivated to go kiting. The young blood camps should inspire young riders and also their parents to get involved in this amazing sport and lifestyle.

Duotone Pro Centers took a rapid development in a very short time we cooperated with 9 centers, 2 more are soon to come. On target and vision of us is to grow the sport and with it, the community. Schools and centers are

really important, because there a customer often has the first contact with kiting and our brand. This first contact often decides if people stay in kiting our not, stay with Duotone or not. Our target with Duotone Pro Centers and also ION Club is to give our customers the best possible experience, with up to date material, competent and safe teaching and a friendly ambiance. A dream would be to have qualified centers at each hot spot of kiting.

We at Duotone love kiting, therefore we want to push all aspects of it even further! Starting with little details like a pigtail, to huge industry changing innovations like the D/LAB concept. We want to inspire all kilters from young to old to develop themselves with the academy, young blood camps and our partner centers. Especially in challenging times, this will make the difference and thrive Duotone further and further!

TILL EBERLE

SAVE OUR PLAYGROUNDS

Building state-of-the-art kitesurfing equipment will always have an environmental footprint. At Duotone, we strive to minimize this footprint whenever possible in order to save our amazing playgrounds for future generations. By developing new environmentally friendly packaging, improving transport routes, researching recyclable materials and greener manufacturing processes as well as supporting organizations that fight global warming, we take our sustainability efforts very seriously.

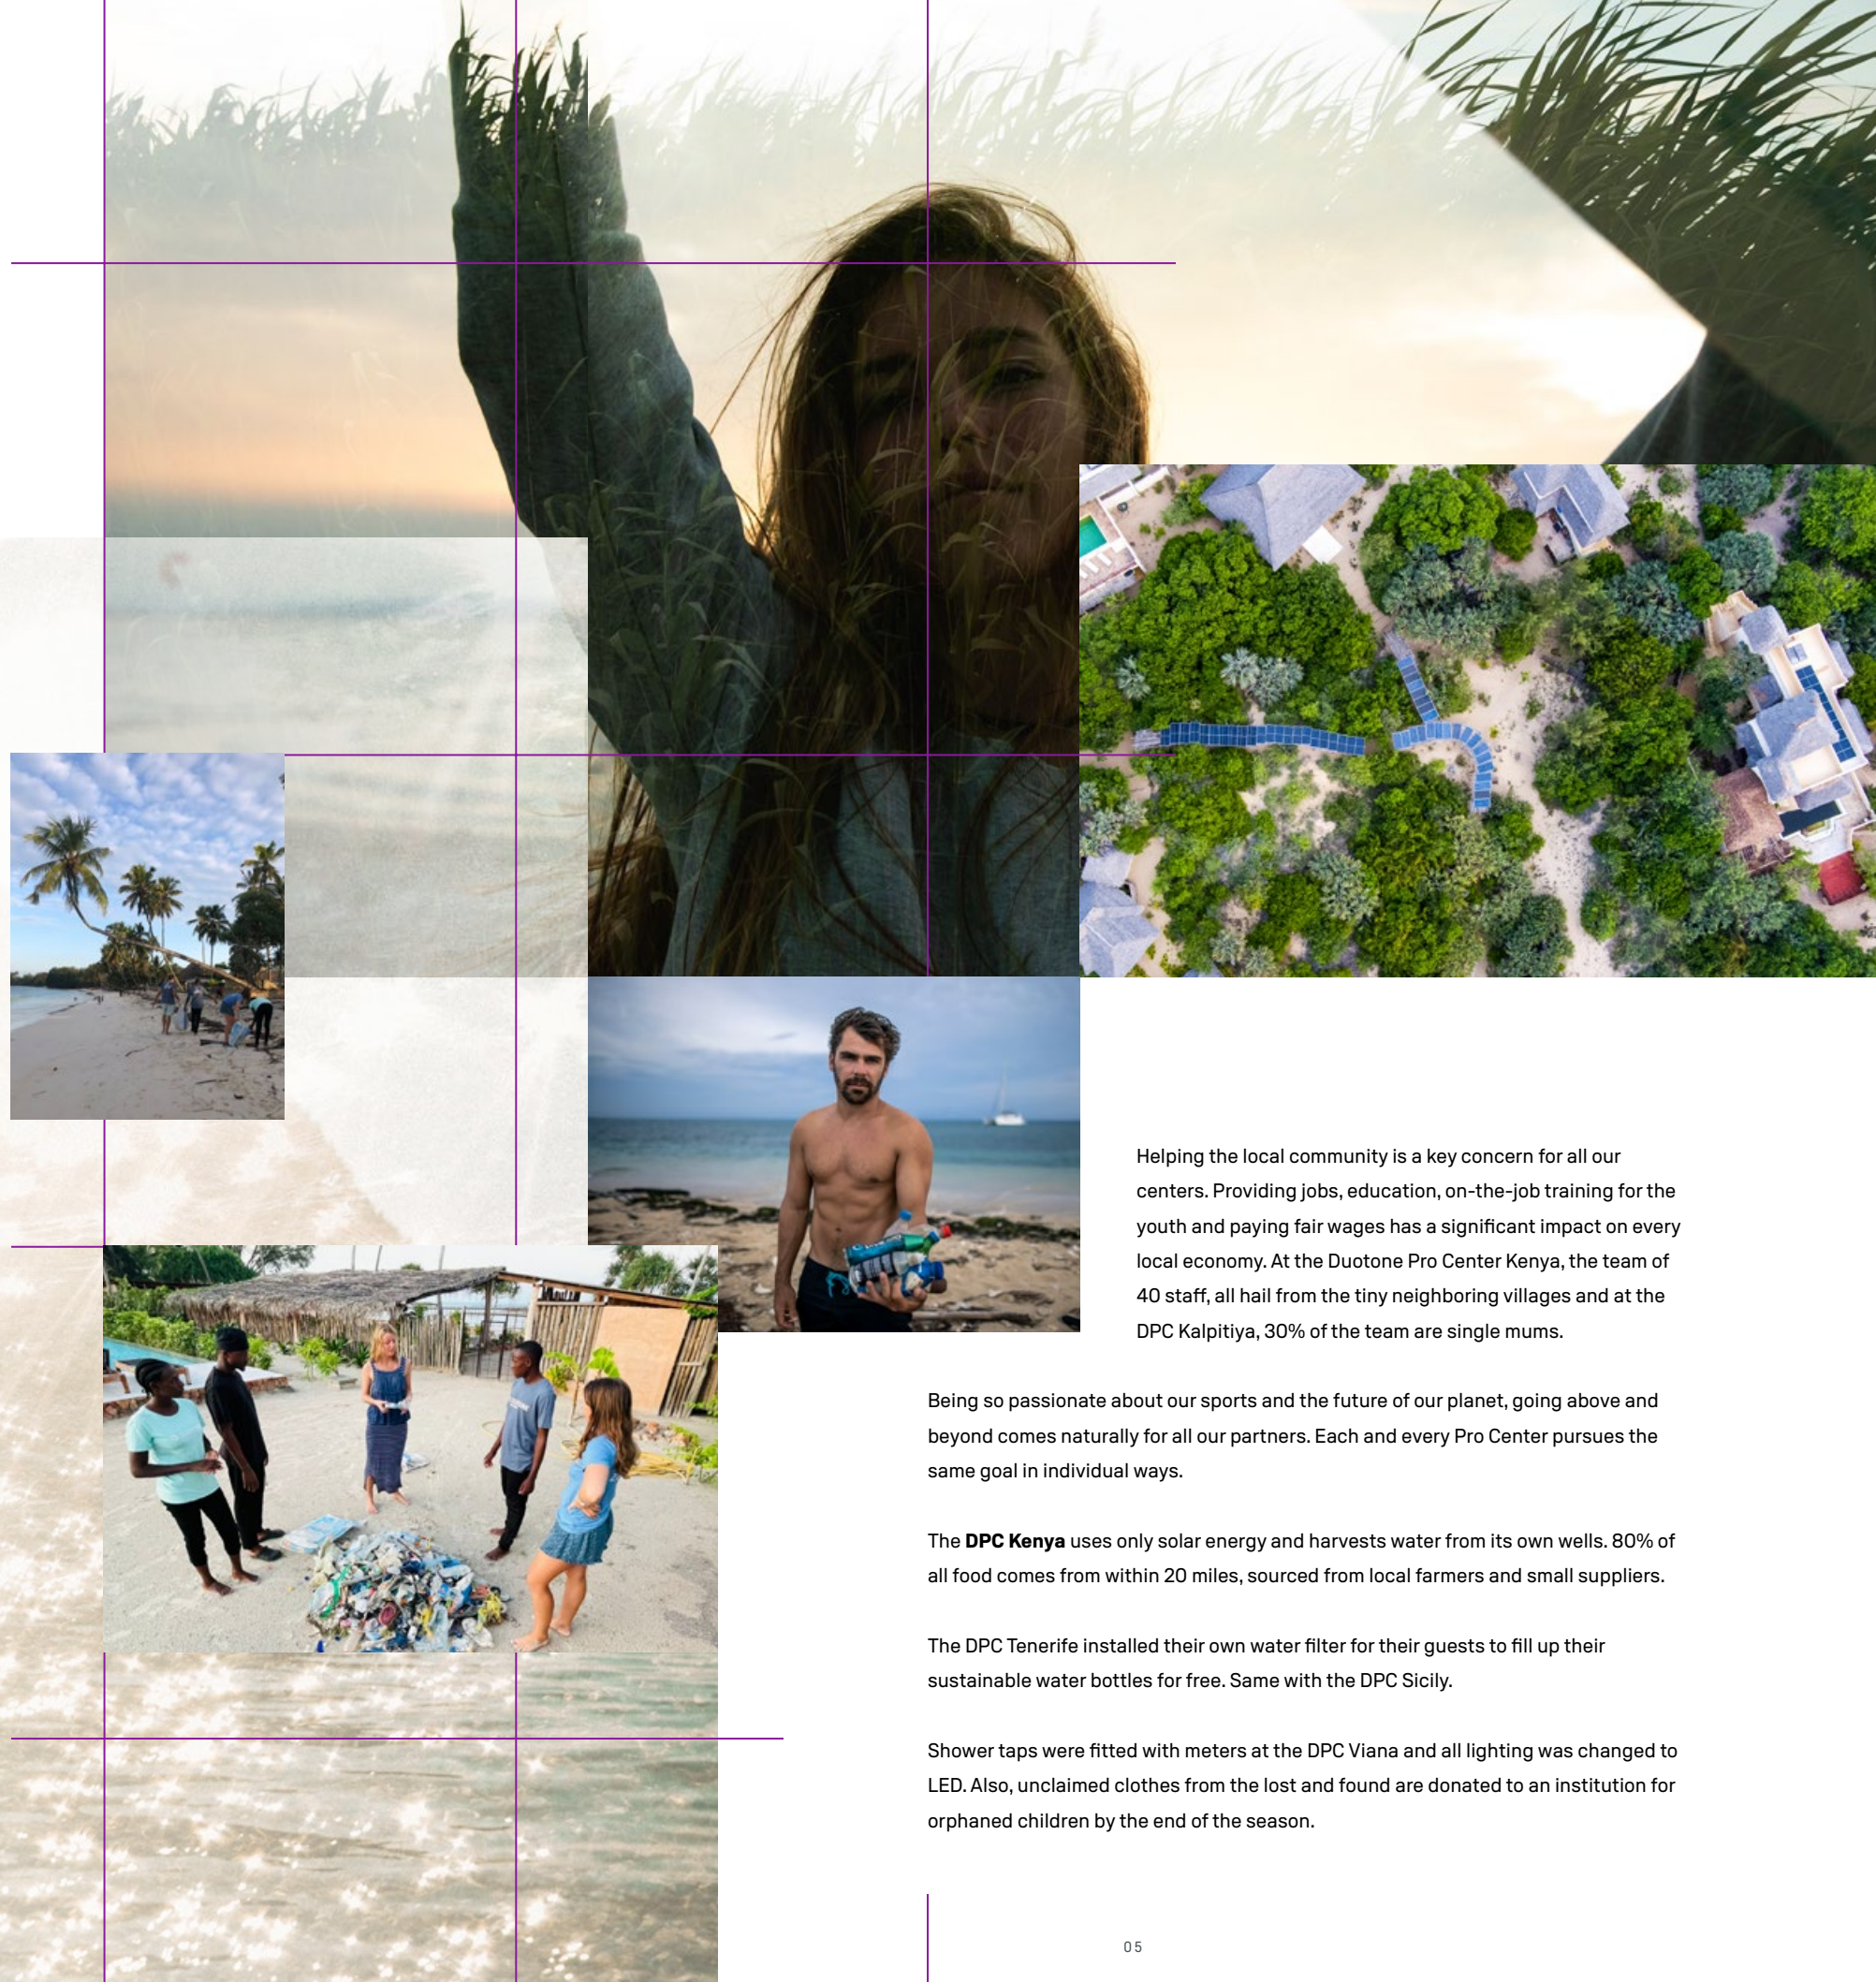

THROUGH THE SUPPORT OF THREE DIFFERENT CARBON OFFSET PROJECTS, DUOTONE HAS SO FAR OFFSET A TOTAL OF 8,059,581 KG OF CO² OVER THE LAST THREE YEARS.

DUOTONE PRO CENTERS

The premium water sports schools with whom we have partnered up — the Duotone Pro Centers — at top spots around the world, have chosen sustainability as one of their key business mandates. Fully committed to creating positive social and environmental change in their region, these schools are doing their part for a better future by going the extra mile to save our playgrounds.

The **DCP Zanzibar**, for example, is enforcing a zero food waste as well as a zero plastic policy. Food scraps are composted and single-use plastic bottles, bags, straws etc. are not used or sold on the premises. Through daily beach clean-ups and other similar regular initiatives, a greater environmental responsibility is promoted in the area.

The DPC Grenadines has a strong focus on offering opportunities for the local people to find work. School drop-outs and young people with minimal employment options are being trained from scratch to become kite instructors.

Helping the local community is a key concern for all our centers. Providing jobs, education, on-the-job training for the youth and paying fair wages has a significant impact on every local economy. At the Duotone Pro Center Kenya, the team of 40 staff, all hail from the tiny neighboring villages and at the DPC Kalpitiya, 30% of the team are single mums.

Being so passionate about our sports and the future of our planet, going above and beyond comes naturally for all our partners. Each and every Pro Center pursues the same goal in individual ways.

The **DPC Kenya** uses only solar energy and harvests water from its own wells. 80% of all food comes from within 20 miles, sourced from local farmers and small suppliers.

The DPC Tenerife installed their own water filter for their guests to fill up their sustainable water bottles for free. Same with the DPC Sicily.

Shower taps were fitted with meters at the DPC Viana and all lighting was changed to LED. Also, unclaimed clothes from the lost and found are donated to an institution for orphaned children by the end of the season.

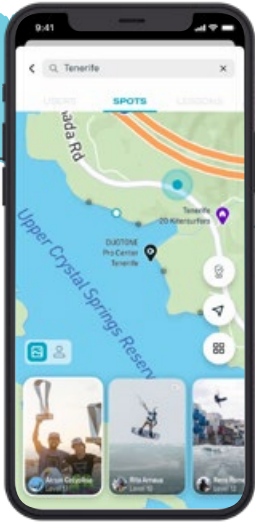

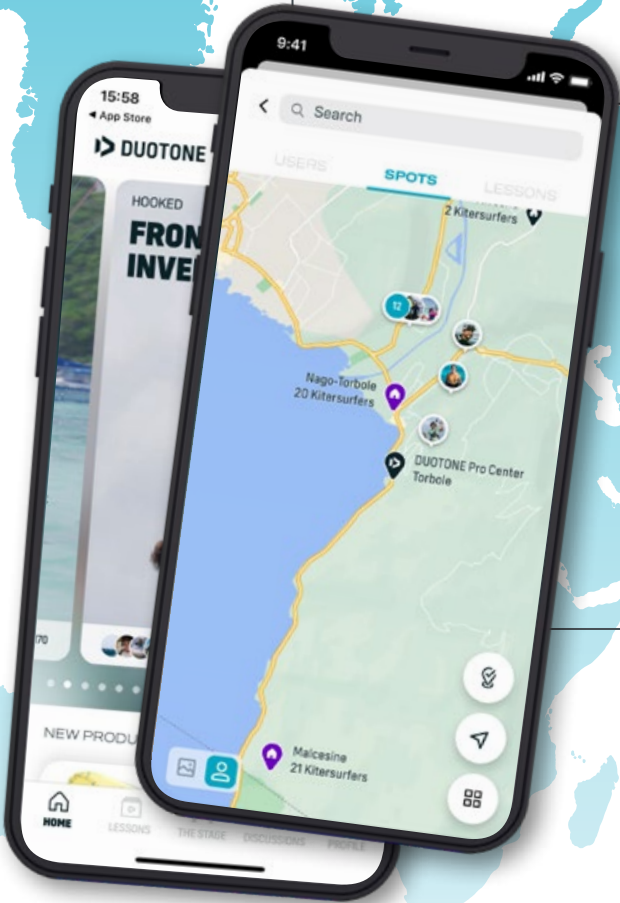

DUOTONE ACADEMY APP

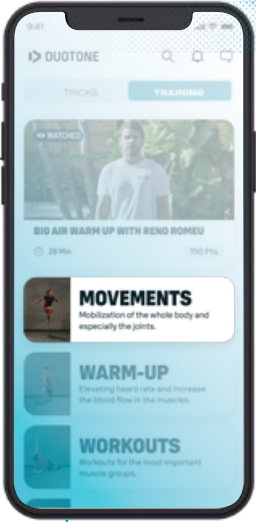

JOIN THE LARGEST KITE COMMUNITY ON THE PLANET & BOOST YOUR KITING TO THE NEXT LEVEL IN NO TIME!

The Duotone Academy App features the most comprehensive trick library worldwide with more than 230 tricks and it's entirely free. The App's tribe of over 130.000 users is growing by the second. Every aspect of your kiteboarding journey is covered. Thanks to our partnership with Porsche and over 300 specifically developed fitness exercises and 40 training sessions, there's absolutely nothing holding you back now from being at the top of your game both mentally and physically!

100 % committed to your quick and safe progression plus maximising your fun factor, we constantly develop new features, such as "recommended products". Stay tuned, the sky is the limit!

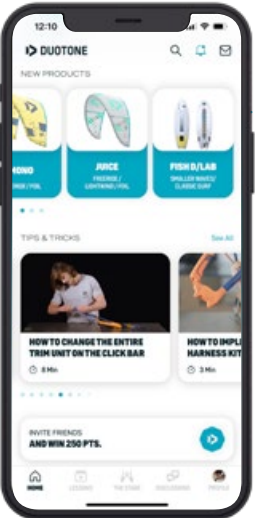

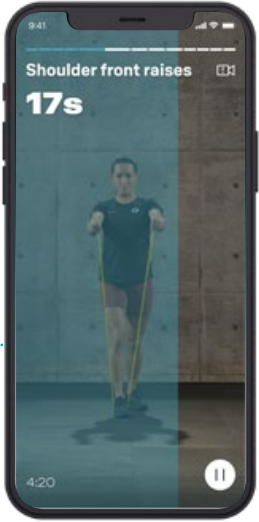

+ Spot Feature Introduction:
Find new kite buddies at your spot, train and push each other. Boost your fun on the water together, share your progress, exchange tips and help each other learn. Also, find the closest Pro Center near you and connect with them directly through the App.

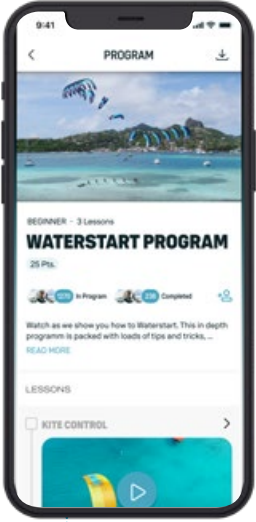

+ A whole new category "Movement" in the TRAINING section!
Plus, over 100 newly added exercises to keep your body strong and lithe, helping to ward off future injuries and prevent plateauing.

+ Train with Rita Arnaus:
Get into top shape with one of the fittest female pros in the industry. With a whole assortment of Rita's favourite exercises, you'll be as flexible as you'll ever be and ready to add a new trick to your bag!

+ Tips & Tricks and Recommended Products:
Get into the right mindset, talk equipment, and find the perfect gear set-up for your very own personal riding style. Discover some insider trade secrets from our international team riders and how to get the most out of your Duotone equipment!

+ New Beginner Videos:
Feeling intimidated to start kitesurfing or set out on your own after a basic kite course? With these new videos and step by step instructions, we aim to help you close that confidence gap and send you on the fast track to becoming a self-reliant kitesurfer.

DUOTONE PRO CENTER

In 2019 Duotone started to partner up with some of the best water sports schools around the globe. By now, there are nine Duotone Pro Centers - and counting - located at prime spots with great wind conditions all year round. Our mission is to deliver unparalleled experiences both on the water and on land for all skill levels. Depending on the school and the respective spot, we offer kiteboarding, windsurfing, stand up paddling, foiling and wing foiling classes as well as rentals.

All our centers provide the latest equipment, a highly professional service, premium facilities and an awesome atmosphere. Whether you're a beginner seeking to learn the basics or an advanced rider keen to fine-tune your skills, you will find everything and more at our schools.

A BRAND-NEW ADDITION TO OUR INTERNATIONAL NETWORK OF PRO CENTERS

We are more than stoked to have added a new destination in 2022: The DPC Zanzibar. Located next to the exquisite Mvuvu Boutique Resort, right on Kiwengwa beach, the longest snow-white beach of Zanzibar. This is East Africa's top kite spot, and our center offers perfect conditions in crystal clear turquoise water for all levels almost all year round. With only 8 rooms, high-end fusion cuisine, spa, pool, the picture-postcard beach right at your doorstep and a wide range of other activities such as safaris, sailing trips, snorkeling or swimming with dolphins, it's the ideal spot for families and couples and truly what dreams are made of!

More new destinations are already in the pipeline! Keep your eyes peeled on our Duotone Pro Center website and social media channels to be the first to find out.

CAMPS & EVENTS

Our vision behind the Duotone Pro Centers is to offer a unique place that ensures an exceptional experience and the opportunity to dive into the exciting world of Duotone in many different ways. From trying the latest state-of-the-art equipment to taking part in kite camps and events, most of which are hosted by our International team riders.

HERE ARE OUR TEAM RIDERS WHO ARE HOSTING KITE CLINICS:

MATCHU LOPES
Strapless Freestyle for men and women

GIANMARIA COCCOLUTO
Freestyle for men and women

RITA ARNAUS
Freestyle for women only

FRANCESCA BAGNOLI
Freestyle for women only

From the very early beginnings, the vision of our brand has been crystal clear: To continuously push the sport to the next level by developing and manufacturing the most advanced equipment, supporting the youth and creating the best experiences for our customers.

Since 2006, Duotone's Young Blood initiative has assisted a countless number of kids and youth, aged from 8 to 18, to enter the world of kiteboarding. It's a privilege to teach them the right techniques to safely enjoy the sport and to offer the opportunity for them to learn from professionals, as is showing kids, teenagers, and parents the positive effects that sport has on the body and mind.

A strong focus of our Young Blood platform is also to spot young upcoming talents. To help the most gifted and ambitious young kites to

live up to their full potential, equip them with all the tools and skills necessary to build a professional kiting career and accompany them on their path to pursuing their dream, is a commitment we take very seriously. So much more is required than just natural talent and riding skills. At such a young age, it is impossible to be aware of the high professionalism and many of the other factors that can make or break a pro career. That is exactly where our Young Blood Camps come in, and they have already proven to be a breeding ground for future champions.

Airton Cozzolino, Matchu Lopes,, who have been on our team since the age of 13, are only one success story. Others, like Reno Romeu and Tom Court, joined Duotone as young teens, staying true to the brand even beyond their active kiteboarding career and now contributing with a multitude of valuable content and product feedback.

More recent Young Bloods, such as Camille Losserand, GKA Vice Strapless Junior World Champion 2021 and Keanu Mertens, GKA Strapless Junior World Champion 2021 as well as Lorenzo Casati, 2nd overall and Andrea Principi 3rd overall at the 2021 Big Air Tour (BAKL), are well on their way to greatly influencing where the competition side of the sport is heading.

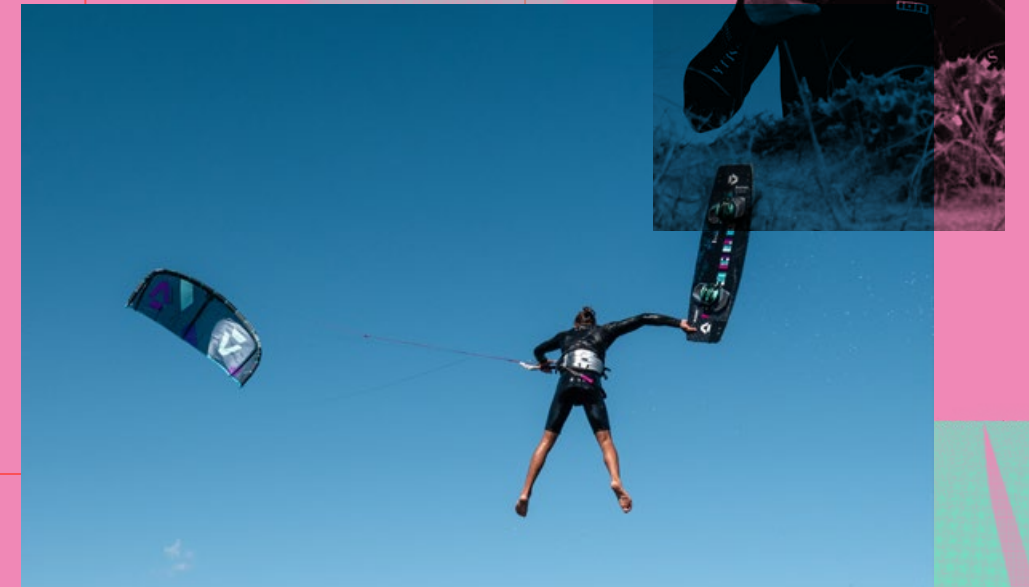

In 2022, besides the national camps in France, Germany, Italy, UK, USA and Australia, the international Young Blood camp will take place at the Makani Beach Club, in El Gouna, Egypt. With a team consisting of several top kite instructors and pro riders, a fitness coach in charge of kite-specific fitness and injury prevention, two videographers, a photographer, and off-the-water learning content, which will include social media training, finding sponsorship outside the kiting industry, video editing and specific heat training, and and and... We are very confident we have all our bases covered.

WHAT'S NEW 2023

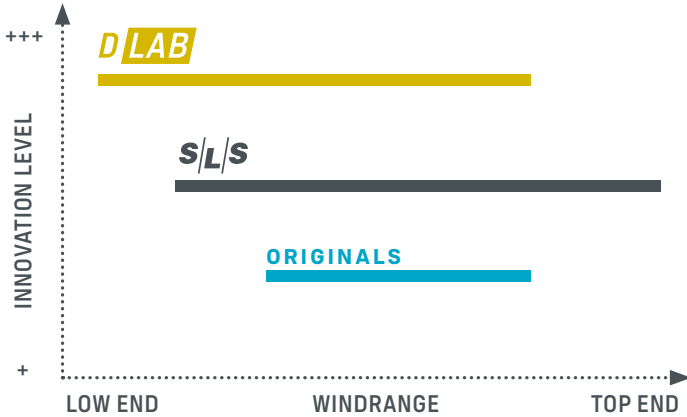

OVERVIEW KITE CONSTRUCTIONS

These are indeed groundbreaking times in kite design! Due to our diligent search for new materials and innovations in construction methods, exciting new materials that are both lighter and more durable have opened up a universe of completely new design options. Duotone is proud to herald in an era of segmentation for our kite models. Between our three constructions, Originals, SLS, and D/LAB, there is the right kite option for every kiter, with materials, construction, and design all working in harmony to fit your preferred riding style, condition, ambition, and budget. This overview will help you understand the differences and guide you to your perfect gear!

TRUE INNOVATIONS

At Duotone Kiteboarding we are constantly striving for new developments and improvements. Because such innovation means a larger choice, a wider wind range, a higher level of safety and faster learning, which ultimately gives you, the user, more time and greater enjoyment on the water.

As the first manufacturer to launch individual kite models in the new, lightweight SLS construction, we took things another step further and pushed the limits of technical feasibility by introducing our D/LAB technology on the market.

By starting to experiment with new materials and innovative construction methods, we discovered a whole new universe of design options, with a complimentary new realm of associated challenges. Initially, weight reduction was our main aim. But rebuilding an existing kite design in a lighter, innovative material, isn't as simple as just changing the cloth. A total redesign (profile, leading-edge diameter, bridle configuration etc.) is required. Whether it is the Aluula in our D/LAB kites, Penta TX in the SLS kites or the standard Dacron: all of these materials have different properties such as strength, stretch, and stiffness, creating

significant implications on the performance, the flight characteristics and riding experience of each kite. Just changing one material in the kite will never make a model perform better. Kite development is always the sum of all the individual factors, such as seam construction, manufacturing technology etc. that leads to the realization of distinct properties in a kite. We thrive on challenges and are proud of the results of our efforts. No stone has been left unturned in our mission to produce a kite option for every single kiter. Choose from one of our three kite constructions: Original (Dacron), SLS (Penta TX) and D/LAB (Aluula), and you will be blown away by the synergy of materials, construction and design to fit your preferred riding style, conditions, ambitions and budget.

ORIGINAL

THE BENCHMARK, VERSATILE ALL-ROUND RANGE FOR ALL LEVELS, VERY FORGIVING, GREAT PERFORMANCE, AND THE MOST BUDGET OPTION.

SLS

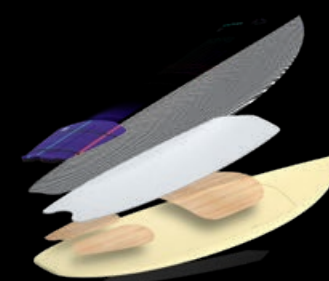

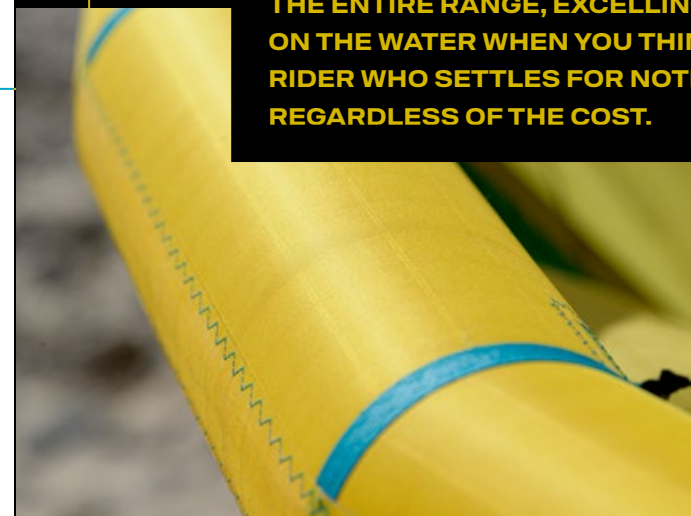

STRONG
LIGHT
SUPERIOR

SPORTIER, FASTER, VERY DIRECT, IMPROVED DRIFT, WIDER WIND RANGE, UP TO 15% LIGHTER AND 5X MORE TEAR-RESISTANT THAN THE ORIGINAL. SLS SHINES IN LARGE AND MEDIUM-SIZED KITES. FOR THE EXPERIENCED, AMBITIOUS AND ENTHUSIASTIC KITER, INSANE PERFORMANCE IN ALL WIND RANGES WITH THE BEST COMPROMISE BETWEEN PRICE AND PERFORMANCE.

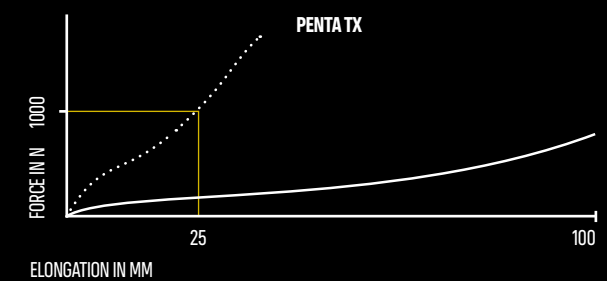

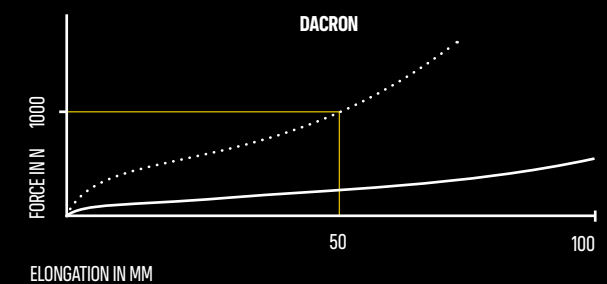

D/LAB

TOP OF THE CROP, UP TO 30% LIGHTER THAN THE ORIGINAL, FEATURING THE MOST ADVANCED DESIGN INNOVATIONS OF THE ENTIRE RANGE, EXCELLING IN LIGHT WIND, GETTING YOU ON THE WATER WHEN YOU THINK IT'S IMPOSSIBLE. FOR THE RIDER WHO SETTLES FOR NOTHING LESS THAN THE BEST REGARDLESS OF THE COST.

BEYOND IMAGINATION

NEO D/LAB

THE NEO D/LAB IS THE MOST ADVANCED WAVE KITE ON THE MARKET, WITH OTHERWORLDLY PERFORMANCE TO SET YOUR SESSIONS ON FIRE, FEATURING ALUULA.

ALUULA

The new fabric in combination with new construction features reduces the weight of the kite by up to 30 % compared to standard constructions and depending on the size, which is a considerable saving of up to 1kg, especially when the wind is light. Elsewhere the construction has been fine-tuned to reduce weight wherever possible, while innovative use of material weaves allows improved turning ability and response.

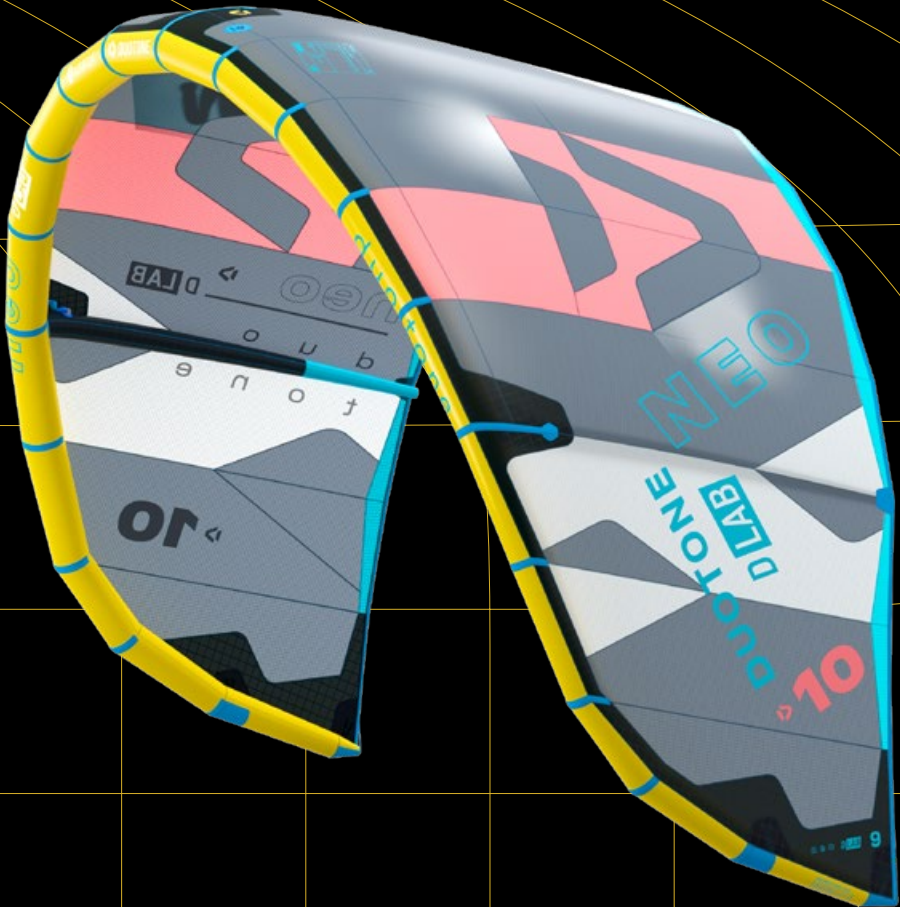

The Neo D/LAB is poised to take the world by storm, the ultimate in high performance kite technology and featuring the absolute pinnacle of design and lightweight materials. Utilising an updated version of the Aluula fabric in a combination with a new Hybrid Flex Strut, offering up to an incredible 30% weight saving on the original Neo and guaranteeing an incredible responsiveness. Innovative materials such as Trinity TX and our high-end construction standards combine to ensure the Neo D/LAB is light. It is also very durable and can handle the rigours of

a session in big waves. The kite's performance must be experienced to be truly understood; it is nothing short of phenomenal. The Neo has a reputation as one of the best performing wave kites on the market, and the D/LAB version is entirely out of this world. The low-end range is unsurpassed, while the high-end control is abundant. In addition, as you initiate a turn, it is dynamic and responsive in a way you have never experienced before due to the Hybrid Flex Strut. The Neo D/LAB truly becomes an extension of your body on the wave, and the flight

HYBRID FLEX STRUT

The new Hybrid Flex Strut offers the kite its exceptional performance and leads to slightly smoother and more refined handling. The turning is faster and feels more dynamic. These features are controlled by the precisely tuned ratio of Penta TX and STW70 adjusted to each size. The percentage of flex material in the tip struts decreases as the size increases.

characteristics are intuitive. As the wind goes offshore, you can tap into the fantastic drifting capabilities offered by this lighter version, the kite hangs in the air forever. With settings on the kite for strapless, you can quickly set up for some jumps and spins, and the extra airtime afforded to you allows you to pull the latest moves with ease. The Neo D/LAB is a massive leap forwards in terms of performance for the pinnacle of wave riders who demand the best; get a quiver before they sell out!

SIZES	7	8	9	10	11	12
WINDRANGE	17 - 33	15 - 31	13 - 29	11 - 27	10 - 24	9 - 21
REC. LINE LENGTH	22	22	22	22	22	22
REC. BAR WIDTH	M	M	M	M	M	M

KEY FEATURES

SIMPLY THE BEST DRIFT

The Neo is famous for its incredible drifting abilities; the D/LAB version is up to 30% lighter than the original version.

DYNAMIC HANDLING/HYBRID FLEX STRUT

The turning speed and the steering impulse of the Neo is exceedingly quick due to the new Flex Strut Design.

UNRIVALLED STEERING EVEN WHEN DEPOWERED

Incredibly powerful with massive depower
It has a huge bottom end, thanks to the lighter Aluula material.

D/LAB CONSTRUCTION

This helps to reduce the overall weight of the kite and improve performance by.

CHARACTERISTICS

FREESTYLE UNHOOKED SLACK / POP

FREESTYLE HOOKED KITELOOP / BIG AIR / HANGTIME

FREERIDE WINDRANGE / UP WIND / SHEET & GO

FOIL FLYING ABILITY IN LIGHT WIND

WAVE DRIFT / TURNING DEPOWERED / FAST TURNING

ENTRY EASY RELAUNCH ABILITY / STABILITY IN AIR

HYBRID FLEX STRUT

The new Hybrid Flex Strut offers the kite its exceptional performance and leads to slightly smoother and more refined handling. The turning is faster and feels more dynamic. These features are controlled by the precisely tuned ratio of Penta TX and STW70 adjusted to each size. The percentage of flex material in the tip struts decreases as the size increases.

The Neo SLS has blown away the wave riding community, taking an already ground-breaking and market-leading kite, and pushing it to new heights. Penta TX combined with Trinity TX and a new Hybrid Flex Strut create an incredibly light and durable construction that weighs up to 15% less compared to a regular kite, making the Neo SLS so responsive and takes the drifting capabilities to new levels. When you may have dropped a traditionally manufactured kite, the Neo SLS will keep drifting, allowing you to pull off your moves on the wave easily. The new Hybrid Flex Strut ensures that the

legendary dynamism of the Neo SLS is even further improved; new material combinations have been used for better performance. The kite has been tuned so precisely that the percentage of flex material in the tip struts decreases as the size increases. E.g., a 5m is more flexible in the tip struts, compared to a 12m; this gives more rigidity and stiffness to the larger kites where power is a priority and makes the smaller kites even faster. When the kite is depowered, and you have the bar pushed away, the kite still handles and steers, allowing you to ride the wave without losing any control.

PENTA TX

- + Up to 5 times higher tear resistance
- + 50% less elongation compared to standard dacron

With multiple settings on the tips, you can also tune the kite to the day's conditions; having a flatwater strapless freestyle session, set it for maximum pop and powerful loops if you dare. Shredding the waves, tune it for maximum drift and rapid turning speed. The Neo SLS is the epitome of a wave kite: fast, with incredible drift, instant relaunch, and very durable. If you want to ride a surfboard this year, the Neo SLS is the kite for you; no matter your riding style or the conditions, it will perform to the highest levels beyond your wildest imagination.

NEO SLS C07

SIZES	5	6	7	8	9	10	11	12
WINDRANGE	24 - 40	20 - 37	18 - 35	16 - 33	14 - 31	12 - 29	11 - 26	10 - 23

NEO SLS C08

KEY FEATURES

- INCREDIBLE DRIFT**
The SLS version is up to 15% lighter than the standard version
- INCREDIBLY DYNAMIC HANDLING/HYBRID FLEX STRUT**
Twist and change direction quickly
- RESPONSIVE STEERING EVEN WHEN DEPOWERED**
Ability to be direct and dynamic, even when the bar is pushed out.
- INCREDIBLY POWERFUL WITH MASSIVE DEPOWER**
Get going on a smaller kite before other riders.
- SLS CONSTRUCTION**
The SLS construction helps reduce the overall weight of the kite and improves performance by making the frame stiffer.
- GEOMETRY TUNED TO SIZE**
Larger kites designed to use a wider arc and have less sweep in the tips
- KITEDESIGN AT ITS BEST**
Each kite has been carefully fine-tuned for performance.

CHARACTERISTICS

- FREESTYLE UNHOOKED SLACK / POP**
- FREESTYLE HOOKED KITELOOP / BIG AIR / HANGTIME**
- FREERIDE WINDRANGE / UP WIND / SHEET & GO**
- FOIL FLYING ABILITY IN LIGHT WIND**
- WAVE DRIFT / TURNING DEPOWERED / FAST TURNING**
- ENTRY EASY RELAUNCH ABILITY / STABILITY IN AIR**

DUOTONE

TAKE YOUR RIDING TO THE NEXT LEVEL

DICE S/L/S

THE DICE SLS OFFERS PERFORMANCE ACROSS A WIDE RANGE OF DISCIPLINES; FREESTYLE, BIG AIR, KITE LOOPS, AND BREAKING WAVES, BRINGING THE FUN FACTOR TO NEW LEVELS! LIGHT, FAST AND WITH EVEN MORE CONTROL, THIS IS THE GO-TO KITE FOR RIDERS WHO WANT TO RIDE UNHOOKED.

PENTA TX

- + Up to 5 times higher tear resistance
- + 50 % less elongation
- + 15 % lighter overall construction.
Dice SLS is up to 500g lighter than Dice.

The Dice SLS gets a performance boost fit for a 911 on a racetrack! Designed for the advanced kites looking to maximise every session, the kite delivers across a wide range of disciplines. The SLS construction reduces the overall weight of the kite by up to 15% compared to regular constructions and creates a stiffer airframe that offers the most precise handling. The jumping capabilities have been dialled up to deliver extremely powerful lift on take-off and a massive hangtime. The bar feeling is

extremely direct, and the turning speed of the new kite is unrivalled, always giving you all the feedback you can desire and total control. Kite loops are powerful, and you can dial in the type of loop you want to do. This kite is the weapon of choice for riders looking to get radical with their kite loop progression. The reduced weight also improves the unhooked capabilities as the kite can hang in the air for longer while you perform the latest freestyle tricks. In the waves, the improved response will allow you to thread

lines through the trickiest of sections and smash the biggest craves, whilst steering the kite actively. Riders will be blown away by the performance enhancements on the new Dice SLS, delivering across a range of disciplines to a world-class level. It's the one kite quiver killer for the advanced rider to get the most out of every session.

DICE SLS C06

SIZES	7	8	9	10	11	12	13
WINDRANGE	19 – 37	17 – 35	15 – 33	13 – 31	12– 28	11 – 25	10 – 22
REC. LINE LENGTH	20 – 22	20 – 22	20 – 22	20 – 22	22 – 24	22 – 24	22 – 24

KEY FEATURES

- POWERFUL LIFT**
The Dice SLS delivers incredible jumping performances.
- PRECISE STEERING**
Allows the kite to perform in big air, freestyle and waves
- EXCELLENT UNHOOKED PERFORMANCE**
The kite has been designed to offer excellent unhooked performance.

- SLS CONSTRUCTION**
The SLS construction helps reduce the overall weight of the kite and improves performance materials.
- PULLEY LESS BRIDLE SYSTEM**
Offers a more dynamic and direct feel to the kite and a longer-lasting and more durable bridle for harsh use.
- MULTIPLE TIP TUNING OPTIONS**
Tune the kite to your riding style, increase the turning speed or slow it down.

DICE SLS C05

CHARACTERISTICS

- FREESTYLE UNHOOKED SLACK / POP**
- FREESTYLE HOOKED KITELOOP / BIG AIR / HANGTIME**
- FREERIDE WINDRANGE / UP WIND / SHEET & GO**
- FOIL FLYING ABILITY IN LIGHT WIND**
- WAVE DRIFT / TURNING DEPOWERED / FAST TURNING**
- ENTRY EASY RELAUNCH ABILITY / STABILITY IN AIR**

DUOTONE

TAKE YOUR RIDING TO THE NEXT LEVEL

REBEL S/L/S

NO MATTER HOW YOU CHOOSE TO RIDE, THE REBEL SLS HAS A WELL-DESERVED LEGENDARY STATUS! EASY TO JUMP, WITH HUGE HANGTIME, NOW EVEN A KITE LOOPING MACHINE AND A BIG AIR MONSTER, A FAVOURITE OF OUR PRO RIDERS FOR BOOSTING TO THE MOON AND WINNING IN BIG AIR COMPETITIONS.

FLEX STRUT

- + The counterpart to a stiff frame, to ensure a direct and very reactive feel of SLS kites.
- + A softer material enables the strut to bend and twist in a defined way.
- + Steering impulses are transformed smoothly and fast into turning actions

The kite that defined a generation of riders takes the legacy to the next level. Featuring a Penta TX frame construction with a Trinity TX canopy, the Rebel SLS is up to 15% lighter than the standard model. The materials used to make a very stiff kite and enable it to keep its shape in gusty conditions plus deliver smooth power. Flex Struts have been incorporated into the design to allow the tips to twist, this makes the handling intuitive, and the steering is exceedingly dynamic. The design is deeper in

the middle of the kite to deliver a huge amount of power. All that power is nothing without control, and the Rebel SLS has instantaneous depower. This gives you the confidence to ride a big kite in strong conditions when you want to boost the biggest airs. The Rebel SLS is perfect for going huge; the explosive take-off coupled with a vertical take-off propels you to new heights. Once airborne, control is in abundance and the hangtime is unreal, you'll feel like you are floating in the air with long

PENTA TX

- + Up to 5 times higher tear resistance
- + 50 % less elongation
- + 15% lighter overall construction. Evo SLS is up to 500g lighter than Rebel.

flight times on every jump. In light winds, the Rebel SLS delivers plenty of low-end power, with a quick upstroke, thanks to its design and the lighter weight. This low weight improves the drift too, so you can swing under the kite on landings and still recover it. The Rebel SLS is an exhilarating ride that will ignite your soul when you hit the water; you'll take your kitesurfing to new heights every time you send it!

REBEL SLS C08

REBEL SLS C05

REBEL SLS C06

SIZES	6	7	8	9	10	11	12	13	14	15
WINDRANGE	21 – 40	19 – 38	17 – 36	15 – 34	13 – 32	12 – 29	11 – 26	10 – 23	9 – 21	8 – 20
REC. LINE LENGTH	20 – 22	20 – 22	20 – 22	20 – 22	22 – 24	22 – 24	22 – 24	22 – 24	24	24

KEY FEATURES

EASY TO JUMP

The Rebel SLS is the easiest kite in the range to jump.

VERTICAL POWER SPIKE

Has been designed to deliver an explosive take. Huge hangtime

INSTANT ABSOLUTE DEPOWER

The kite spills power faster than any other kite in the range.

FAST AND AGILE

Has been designed to be much more responsive.

SLS CONSTRUCTION

Helps to reduce the overall weight of the kite and improve performance by making the frame stiffer.

MULTIPLE TIP TUNING OPTIONS

Tune the kite to your riding style, increase the turning speed, slow it down, increase or decrease the bar pressure.

CLICK BAR

WHAT'S NEW

STANDARD SETUP

OPTIONAL LOW V / SCHOOL SETUP

V-DISTRIBUTOR III

The new V-Distributor III can be adjusted easily, allowing you to set the front line to split quickly. It can also be removed entirely, very easily, so you can have a very low V. This makes the Click Bar compatible with most kites on the market.

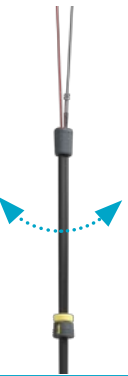

LOW V-DISTRIBUTOR

Reduction of the twist on the PU tubing

Without Low V-Distributor: twist on the PU tubing

With Low V-Distributor: no twist on the PU tubing

REMOVABLE FLOATER

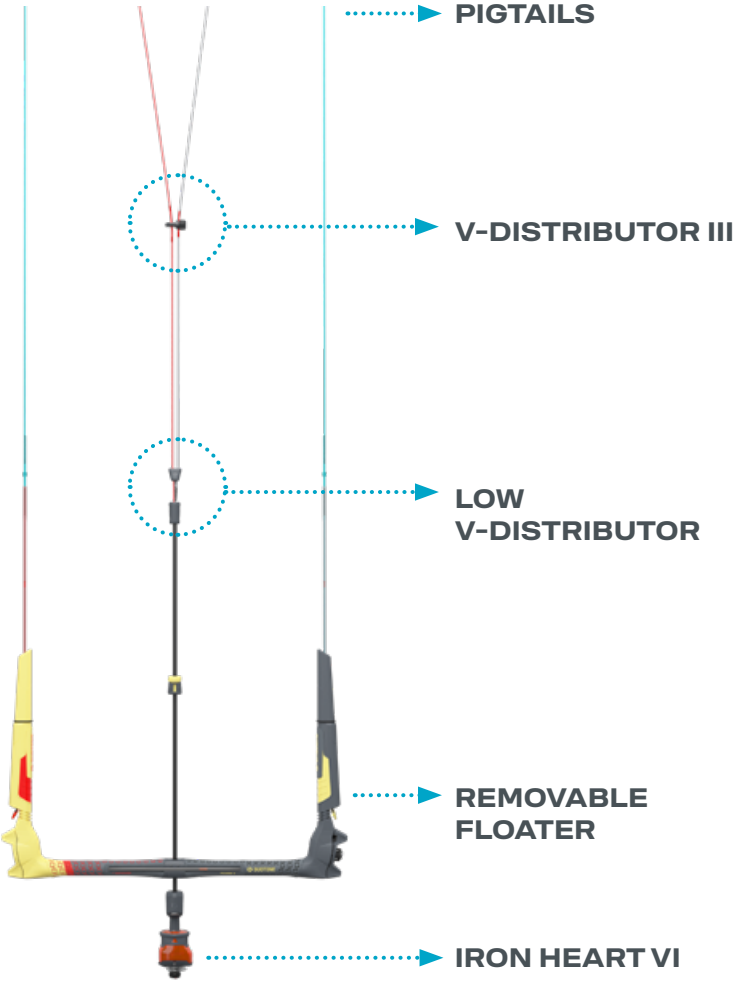

The floater is also removable so that you can inspect the leader lines of the bar easily.

180° twist to the right

Control points for correct reassembling

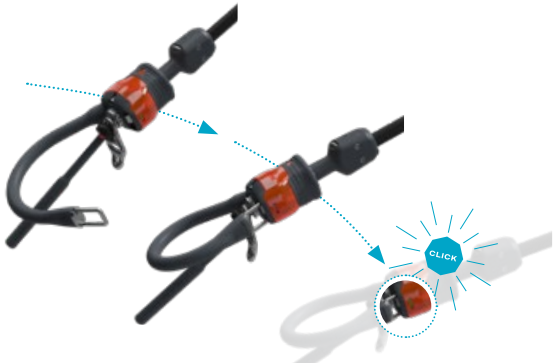

MINIMALISTIC PIGTAILS

The new pigtails have reduced sleeving to only where it is needed. This reduces the weight and the drag through the air at a critical connection point to the kite.

IRON HEART VI CLICK-IN SAFETY SYSTEM

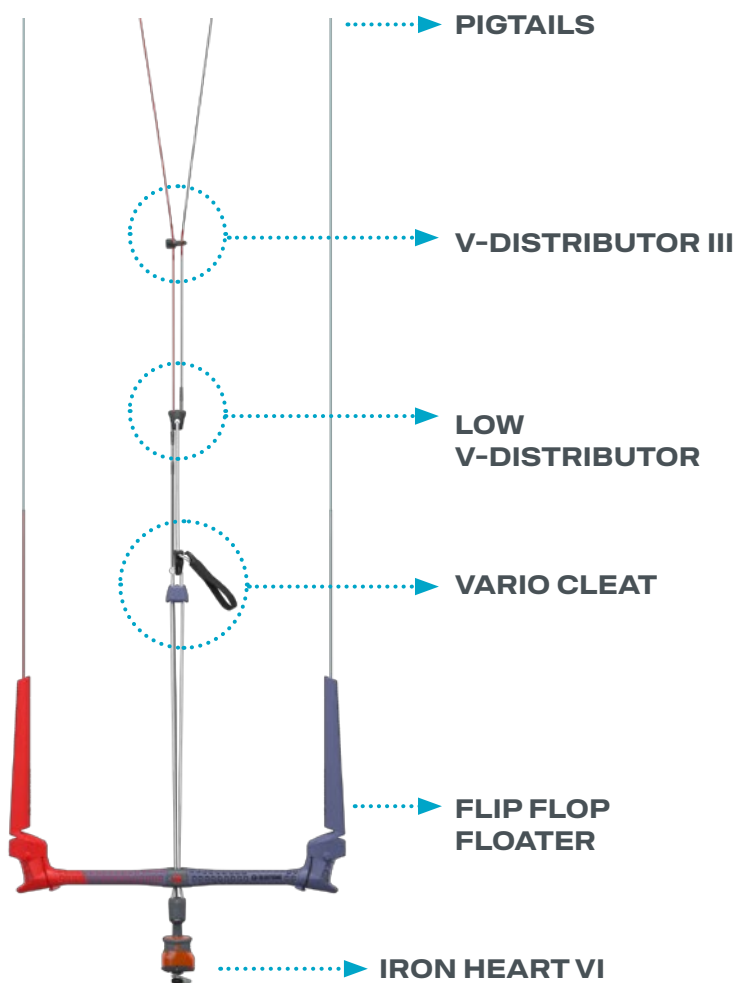

The new Iron Heart VI features a simple Click-In Safety System including an optical control function that allows you to reconnect the chicken loop as easily as you clip in your seat belt plus being able to check the green marking, to ensure the system is closed properly. Due to a ball bearing the Click Bar has an automatic untwist function.

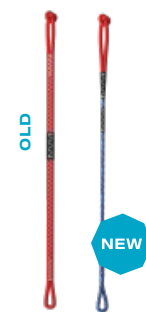

TRUST BAR

WHAT'S NEW

MINIMALISTIC PIGTAILS

The new pigtails have reduced sleeving to only where it is needed. This reduces the weight and the drag through the air at a critical connection point to the kite.

LOW V-DISTRIBUTOR

Twists the front lines by 90° and allows an optional low V setup.

STANDARD SETUP

OPTIONAL LOW V / SCHOOL SETUP

V-DISTRIBUTOR III

The new V-Distributor III can be adjusted easily, allowing you to set the front line to split quickly. It can also be removed entirely, very easily, so you can have a very low V. This makes the Click Bar compatible with most kites on the market.

VARIO CLEAT

Adjustable Vario Cleat with new Adjuster Clip to increase safety and comfort.

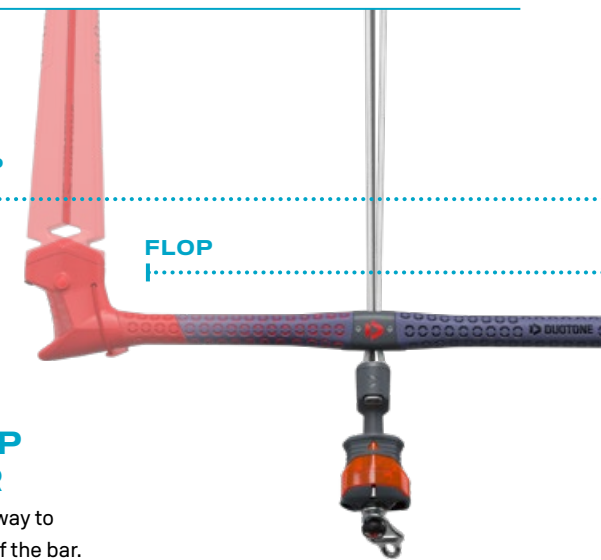

FLIP

FLOP

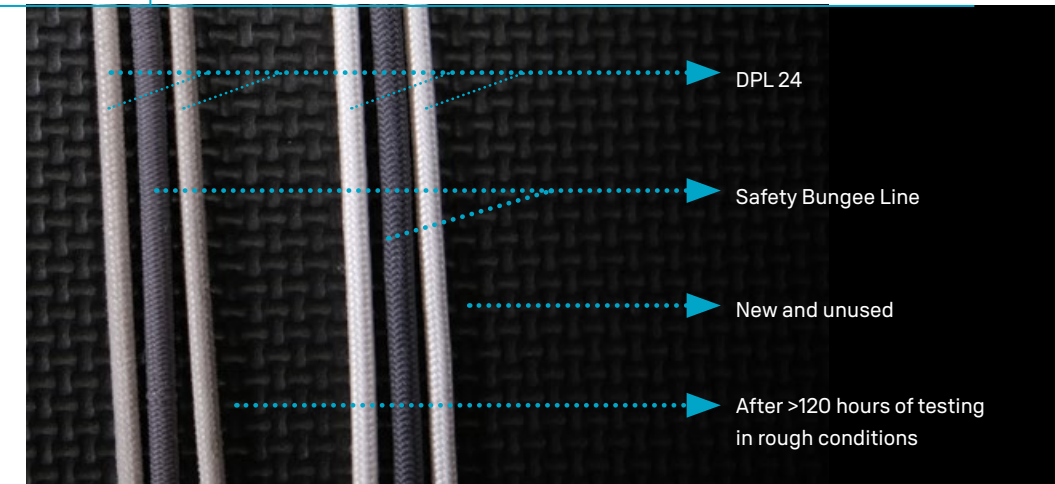

FLIP FLOP FLOATER

A quick and easy way to adjust the width of the bar.

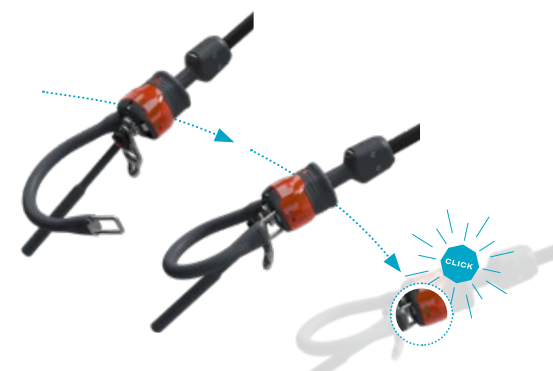

DEPOWER & SAFETY BUNGEE LINE

The new depower line has been exclusively designed by Robline for Duotone, featuring a new, highly durable Dyneema sleeving that minimizes wear and delivers the best performance and feeling.

IRON HEART VI CLICK-IN SAFETY SYSTEM

The new Iron Heart VI features a simple Click-In Safety System including an optical control function that allows you to reconnect the chicken loop as easily as you clip in your seat belt plus being able to check the green marking, to ensure the system is closed properly. 4 4 2 3 0 - 3 2 0 2

KEY FEATURES

IRON HEART VI

The new Iron Heart VI features a simple Click-In Safety System including an optical control function that allows you to reconnect the chicken loop as easily as you clip in your seat belt plus being able to check the green marking, to ensure the system is closed properly.

PRECISE BACK LINE TRIM

The Click Bar has been designed to give you total control over the trim of the kite - no more pulling and hoping: trim it in precise increments!

FLITE99 LINES

The new FLITE99 lines from Robline reduce the drag through the air and offer a more direct steering response. The new pigtails have reduced sleeving only where it is needed. This reduces the weight and drag through the air at a critical connection point to the kite.

AUTOMATIC UNTWISTING SAFETY SYSTEM

Lines are automatically untwisted during rotations due to the ball bearing. Even the guided safety line is untwisted to reach an optimum of safety and comfort.

V-DISTRIBUTOR III

The new V-Distributor III can be adjusted easily, allowing you to set the front line to split quickly. It can also be removed entirely, very easily, so you can have a very low V. This makes the Click Bar compatible with most kites on the market.

4 OR 5 LINES

If you have a 5th line kite or want to ride your Duotone kites that are compatible with 5th lines, then there is an upgrade kite allowing you to ride with a 5th line.

Safety first. Nothing is more important in kiteboarding than to be able to rely on your gear, our lives depend on it. For more detailed information about ISO certified products please visit our website.

5TH ELEMENT UPGRADE KIT CAN BE ORDERED SEPARATELY (ONLY FOR CLICK BAR)

TRUST BAR S/M

4 4 2 3 0 - 3 2 0 1

KEY FEATURES

IRON HEART VI

The new Iron Heart VI features a simple Click-In Safety System including an optical control function that allows you to reconnect the chicken loop as easily as you clip in your seat belt plus being able to check the green marking, to ensure the system is closed properly.

NEW DEPOWER LINE SET UP

It features a new Vario Cleat with an adjustment clip to store the depower line. This has been exclusively designed by Duotone and is a unique progress, featuring a new Dyneema line that minimises wear and gives the best feeling for your fingers.

FLITE99 LINES

The new FLITE99 lines from Robline reduce the drag through the air and offer a more direct steering response. The new pigtails have reduced sleeving only where it is needed. This reduces the weight and drag through the air at a critical connection point to the kite.

WIDTH ADJUSTMENT

The easy width adjustment makes the Trust Bar the perfect one for all all-rounder, suitable for most kites on the market, ideal for any kite model or size.

V-DISTRIBUTOR III

The new V-Distributor III can be adjusted easily, allowing you to set the front line to split quickly. It can also be removed entirely, very easily, so you can have a very low V. This makes the Click Bar compatible with most kites on the market.

EASY TO UNTWIST

A new friction bearing allows easier untwisting of your lines after tricks.

CHOOSE YOUR STYLE

WAKESTYLE KIT

4 4 2 1 0 - 8 1 5 1

KEY FEATURES

- + Direct connection to the Iron Heart results in a bigger depower stroke
- + No irritating chicken dig

CHICKEN LOOP KITS FROM 2022 OR OLDER,
ARE ALSO COMPATIBLE WITH THE NEW IRON HEART VI

JAIME **S/L/S**

Looking for the ultimate freestyle and big air board to take your jumps to the next level? The Jaime SLS is perfect for riders who like throwing down the odd freestyle trick and love to cruise around, but ultimately want the performance needed to get that highest jump record on the leader board at their home spot.

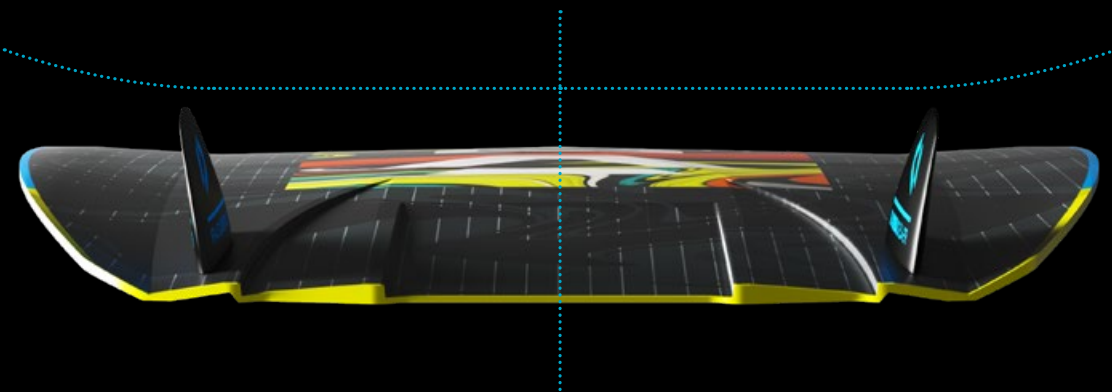

JAIME
44230-3420

JAIME SLS
44230-3421

DOUBLE ROCKER LINE CONCEPT

The all-new Double Rocker Line Concept ensures huge amounts of grip through the water, leading to impressive pop and big air.

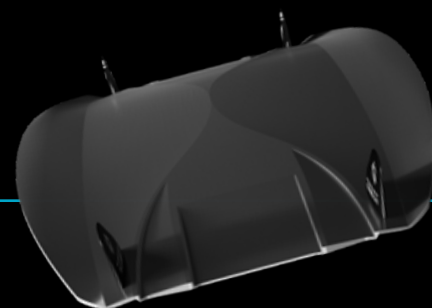

WATERLINE

90°

ANGLED FINS

This year the fins on the Jaime have been angled to improve grip in the water for better upwind performance, improved pop and higher jumps.

SELECT **S/L/S**

The world's most comfortable freeride board gets the SLS treatment and a new shape for 2023, make sure you choose one size longer! The board is light, strong, and incredibly responsive, featuring a Textreme Innegra and Biax Carbon construction. So, if full speed cruising and jumping is what you love to do on the water, the Select SLS is the board for you!

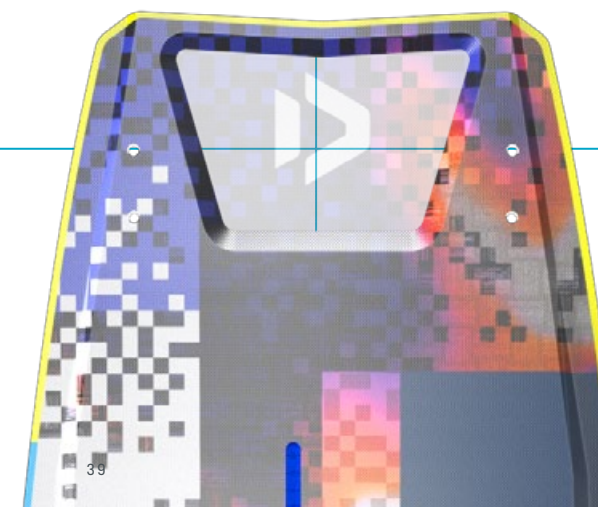

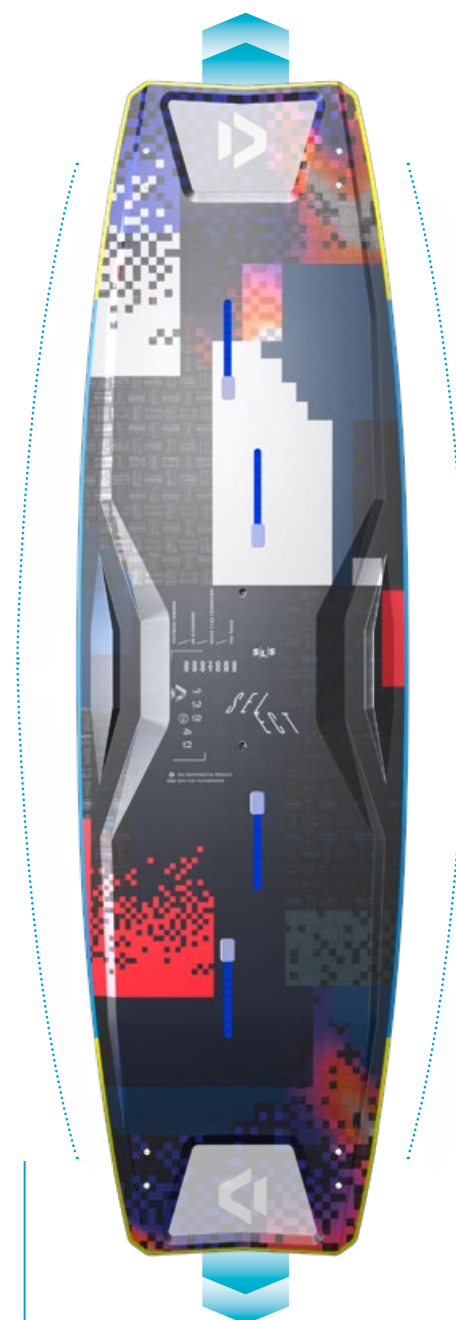

SELECT
44230-3425

SELECT SLS
44230-3426

NEW OUTLINE

The new shape gives you even more comfort on the water and a smoother ride through chop. In addition, the low end is improved, and landings are smoother too. The new shape means you need to choose a slightly longer board to get the improved performance (If you rode a 138/41 last year, you'd prefer a 141/41 this year)

SPLITBOARD VOYAGE

A brand-new board in the Duotone line-up, the Voyage is a board that many of you have been asking for and finally, after years of testing and perfecting the shape and design, the first split board in the range has arrived!

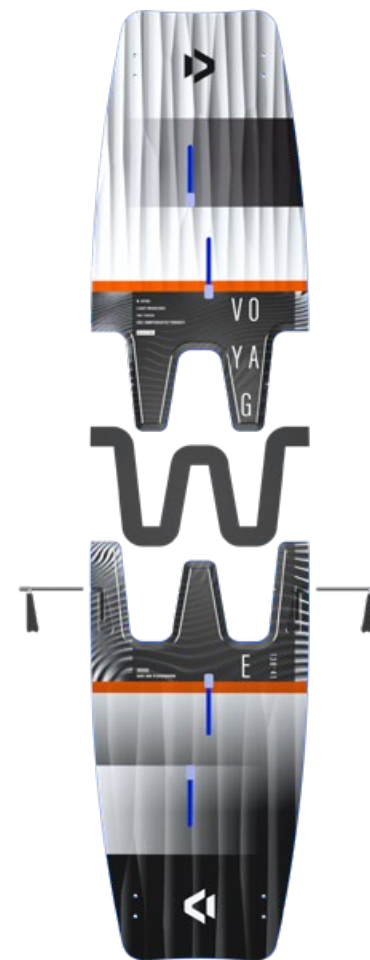

Many split boards struggle with two main issues, flex, and the physical act of putting it together. The Voyage overcomes these by using an M-Spine connection that interweaves the two halves of the board, so they act as one when connected. You only need two pins to put the board together (no complicated screws or bolts you can lose in the sand), the icing on the cake, and what makes the Voyage so unique is the design itself.

Using the fantastic Select as a starting point, the board has incredible DNA embedded into it. The board is designed for freeride and big air, with a comfortable ride and easy flex characteristics. It's smooth through the chop and fantastic at boosting into the air. The tips have been tuned for flex and channels added to offer grip and a better ride when the ocean is choppy. Easy to assemble, engaging to ride, ideal for travel but most of all, incredible for freeride and big air, the Voyage is a split board like no other.

New for 2023, it's the board you've been waiting for; The Voyage. A splitboard designed for travelling. It only takes two pins to connect the parts, and it's perfect for freeriding and boosting some airs.

VOYAGE
44230-3425

KEY FEATURES:

IDEAL TRAVEL BOARD

With space at a premium on so many flights these days, the Voyage can be split in half by simply removing two pins, saving you space and money when you travel.

M-SPINE

The M-Spine connection is incredibly secure and durable; it also helps with the flex throughout the board and makes the Voyage extremely responsive.

SELECT OUTLINE

The Voyage has been designed around the incredibly successful shape of the Select; the premium freeride board in the range.

TIP CHANNELS

These help the board track in choppy conditions and reduce some of the chatter as you ride across the water.

SOFT TIPS

These absorb the chop and lead to a smooth ride no matter the water state.

LIGHT WOODCORE

To keep the board's weight down, a Light Woodcore is used; this has excellent flex characteristics and makes the ride very comfortable.

YOUNG BLOOD

BOARDS

Our Young Blood Camps have been empowering young groms to chase their dreams for nearly two decades. We have learnt a lot in the process. One thing we can say for certain is that no matter whether you're aiming for the stars or simply wanting to shred the local spot, the right equipment is crucial. With Mum or Dad's board not only the fun factor, but the performance and learning curve are compromised, not to mention the safety factor. That's why we have developed two brand-new boards, specifically tailored to the weight, strength and demands of the upcoming rippers of tomorrow. This is purely a passion project for Duotone as we take pride in supporting the next generation the best we can.

Take your pick, whether you're into freestyle, strapless or wave riding, we've got you covered! We proudly introduce Slash and Shred!

DUOTONE

SHRED

Your young ones have been waiting for this board! All-new for 2023 is the Shred, a grom specific design with a narrower outline and specially formulated flex characteristics for all the younger shredders out there.

KEY FEATURES:

Narrower Outline Especially Designed for Groms

The unique shape makes it easier for lighter riders with smaller feet to edge and get pop; carving from rail to rail is also smoother.

COMFORTABLE RIDE AND EARLY PLANING WITH SPACE FLEX

Space Flex is a unique flex technology that offers the best response throughout the length of the board, offering a smooth ride and early planing.

SMOOTH CARVING DUE TO SPACE FLEX

When you are carving on the Shred, the transition from rail to rail is smoother, thanks to the enhanced characteristics offered by Space Flex.

RESPONSIVE AND LIGHT CARBON BEAM

A Carbon Beam is used in the construction of the Shred; this increases the board's performance and responsiveness, giving you a dynamic ride.

EASY HANDLING WITH GRAB RAILS

Whether you are carrying it down to the water's edge or performing the latest board off tricks, the Grab Rails make it easy.

STEP MONO CONCAVE BASE

The Step Mono Concave Base encourages the board to get on the plane early, smooths out the landings and helps with pop.

SLASH SLS

Absolutely new for the 2023 season for all Young Bloods is the Slash, a purpose-built grom edition of the Whip SLS designed for smaller riders looking to maximise their performance on the water. Perfect for strapless and wave riding, the board is ideal for youngsters wanting to get into the discipline and fantastic for riders hustling for podiums and everyone in between.

KEY FEATURES:

High-performance small wave/freestyle board

The unique shape of the Whip SLS makes it the perfect board for the rider who likes to throw down the latest tricks as much as they want to carve up the waves.

SNAPPY TOP TURNS

The compact shape enables you to turn incredibly tightly in the pocket; vertical top to bottom turns are the speciality of the Whip SLS.

INCREDIBLE SPEED GENERATION

The rocker line and channel on the board's base combine to offer incredible speed, both on the wave and when riding on the flat; this is great for linking turns, catching fast waves, and popping huge tricks.

INNEGRA SHIELD

The Innegra Shield completely wraps around the whole board; this provides unrivalled protection from everyday knocks and scrapes and keeps your board looking fresh.

CORK SHOCK ABSORBER 2.0

Comfort for your feet, the Cork Shock Absorber 2.0 takes the pressure off your heels while providing perfect contact with the board to transfer your movements into the wave.

CARBON BEAM

The Carbon Beam reduces the board's weight and injects a high level of response and flex, making the board feel alive underfoot.

ENTITY

Offering the ultimate in flexibility, adjustability, reliability and comfort, our legendary NTT foot straps just got even better! Featuring the brand-new “Double Pin Strap” adjustment system, it's never been easier to perfectly adapt the straps to the shape and contour of your feet.

For bombproof grip and more control over your board with optimum mobility, the 2023 NTT is setting a new benchmark in hold, ergonomic design and safety.

ENTITY 44230-3311

VARIO

An essential part of the Duotone collection, the Vario Combo footpads and straps are compatible with all Duotone boards of every generation and now straps available in two sizes: XS/33–36 and S–L/36–47

Structured, comfortable and durable, the ergonomically shaped pads deliver a satisfying ride and cushy feel. Its proven anti-slip features guarantee a firm grip for optimum communication between you and the board. The strap insertions and track system ensure that the strap's width and pad's stance can be easily mounted on the board and adjusted when needed. The advanced Velcro closure offers compatibility across a broad range of sizes and is quick and easy to use.

<p>The Session SLS excels in bigger waves, but is still at home in nearly any size surf. Ample volume under the heel helps the board flow through turns while the slightly domed deck shape provides a nimble ride for an otherwise very control-oriented design. With it's rounded pin tail the Session is a carving machine in waves of any size and an excellent choice for high wind and choppy water. If you want an all rounder that gives you maximum control in all conditions and stays engaged and connected through blazing fast carves, the session is the one for you.</p>		<p>The WAM SLS is the performance all-rounder at home in nearly all conditions. With it's curvy rocker and outline and high-performance rails, the WAM SLS is designed for radical top to bottom surfing in a wide range of conditions. The Wam SLS excels in everything from small onshore waves to pumping down-the-line surf. The WAM is fast, lively and agile and offers a dynamic and exciting ride no matter the conditions.</p>		<p>The Whip SLS is a small to medium wave and strapless freestyle machine. Generous nose rocker, high performance rails and a "wide bump-squash" tail design, make the Whip quick and agile when transitioning rail to rail, very reactive and able to operate in a tight transition in small waves for radical turns. The compact shape makes the Whip the ideal board for strapless freestyle pros and seasoned surfers. The Whip SLS is an extremely well-balanced board with incredible handling, but still provides explosive snap off the top with the ability to turn in a very tight radius on steep sections.</p>		<p>The new 2023 Slash is the grom edition and younger brother of the Whip SLS. Ideal for small to medium waves and strapless freestyle. The Slash features all of the performance benefits of the Whip SLS in a smaller package for young up and coming rippers!</p>

PRODUCT PROFILE	The Fish SLS excels in smaller waves and lighter wind with amazing carry and glide thanks to it's large effective surface area. The Fish is a maneuverable and agile high performance machine that will inspire your confidence in small to medium waves. The Fish is an alternative shape that feels like a high performance board and does not force you to adapt your riding style like many other alternative designs. It's no wonder the Fish has now become one of our best selling models and our team riders have all added a Fish to their quiver! From 1 foot to 6 foot, once you ride the Fish SLS you'll be spoilt forever.	Airton Cozzolino, the master mind behind the Voke, brought this concept to life together with shaper Sky Solbach. The result is a dedicated strapless freestyle board ready to push the limits of strapless freestyle. The fast rocker and relatively parallel outline make it incredibly fast and stable and the wide powerful tail provides the perfect springboard for explosive pop. A nearly symmetrical outline shape is ideal for spins and the deep bottom channels allow the Voke to split the water for fast, controlled landings. If you're learning first strapless moves or a world tour champion, then the Voke SLS is your weapon of choice.	The Hybrid SLS is based on the Whip shape, but with a modified bottom channel and a foil attachment. The Hybrid SLS can be used as a kitesurf board or a foil board. Our unique four-point foil mount is lighter than conventional tracks and still allows the board to maintain decent flex in the mounting area when used as a surf board. An excellent small to medium wave kitesurfboard or a all round free ride foil board, the Hybrid SLS makes an excellent travel board to cover all your surfing and foiling needs with one single board.	The Wam is at the cutting edge of high performance kite surfing. With it's curvy rocker and outline and high-performance rails, the WAM is designed for radical top to bottom surfing in a wide range of conditions. The Wam is at home in everything from small onshore waves to pumping down-the-line surf. The WAM is fast, lively and agile and offers a dynamic and exciting ride no matter the conditions. With it's bomber Classic Bamboo Tec construction the WAM is a high performance kite-surfboard for strapped and strapless kitesurfing.	The Whip is a small to medium wave and strapless freestyle machine. Generous nose rocker, high performance rails and a "wide bump-squash" tail design, make the Whip quick and agile when transitioning rail to rail, very reactive and able to operate in a tight transition in small waves for radical turns. The compact shape makes the Whip the ideal board for strapless freestyle, strapped airs and seasoned surfers. The Whip is an extremely well-balanced board with incredible handling, but still provides explosive snap off the top with the ability to turn in a very tight radius on steep sections.

Track Mount / 4 Way Mount

Track Mount / 4 Way Mount

The Pace SLS is the board to fulfil your need for speed when freeriding, smashing the latest freestyle tricks or even challenging your friends and race opponents.

A comfortable freeride concept which can handle speed!

Rigid Carbon Prepreg Construction

Precision Molding Technique

- + Light weight construction for better feedback of the foil
- + All round freeride design
- + Volume to help you when you need it
- + High nose rocker and increased surface area for forgiveness

- + All round freeride design
- + Volume to help you when you need it
- + Pocket style small boards and cruiser larger models
- + High nose rocker and increased surface area for forgiveness

- + Rigid Carbon Prepreg Construction
- + Optimized rails for better upwind performance
- + Extra volume for light wind performance
- + Multiple footstrap options
- + Track foil mount
