

**Bataleon<sup>TM</sup>**

The future is three-dimensional.

Ride the future.

# why

Why did you start snowboarding?

To win medals and break records?

We didn't think so. We never felt that way about it either. If you ask us, snowboarding is about fun. It's not a competition.

That being said, we do take that fun seriously. Not a day goes by that we aren't thinking of ways to improve the snowboarding experience for riders of all ability levels. Season after season, our Triple Base Technology™ (3BT™) boards get better and better, helping you land tricks, carve slopes, and float through powder.

For more than 17 years, Bataleon has led the industry in 3D shape technology. The lifted contact points of our 3BT™ boards have made snowboarding more enjoyable for countless riders around the globe.

Now, as other brands begin to bring 3D shapes to market, we see our philosophy legitimized.

It feels good because we've been dedicated to making snowboarding more fun since day one.

Smile!  
It's snowboarding.

Crazy shapes look cool, but if they don't ride well then what's the point? We always put performance first and our 'crazy' shapes are a great example of that. People might call them crazy; we call them creative. These boards are engineered with 3D shaping to out perform anything you've tried before. Hop on one of these boards and see how good crazy can be.

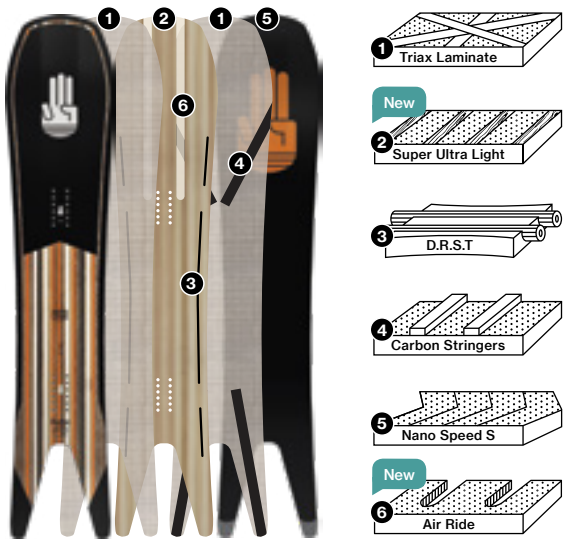

# SEE THEM CREATIVE

The Surfer's ultra wide 3D nose and deep cut swallowtail offer effortless float on the deepest days. The progressive outline paired with POW 3BT™ guarantee powerful turns and astonishing edge hold. This board is truly beyond belief. Be the envy of the lift line on the spec'd up Ltd. Only 150 produced and delivered in a fitted travel sleeve.

# AIRRIDE™

## AirRide™

We incorporated a flexible composite material into the woodcore along the 3BT™ crease points to dampen vibration at high speed and make your snowboard smoother in all conditions. Think of it as a top of the line suspension system for your snowboard.

The Jam is built for top level performance. This all-mountain freestyle board is tuned for experienced riders who want one board to attack the mountain and do it all. The more power you put in, the more it gives back.

Sure, girls want to have fun, but they also want the best board money can buy. What if that board is also the most fun to ride? And what if that board will encourage progression and help you ride with more confidence? Our Triple Base Snowboards do all that and more. Whether you are trying to link your first turns or going on a serious backcountry mission, we got you covered. These performance oriented snowboards are geared specifically for women who want to have fun and so much more.

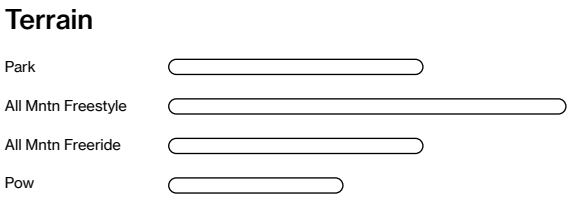

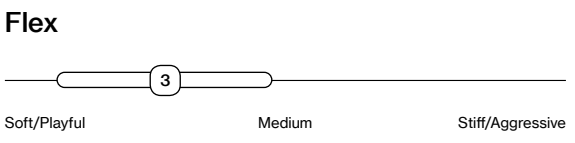

The FeelBetter is a soft and forgiving board designed for women who want to progress with confidence. The Freestyle 3BT™ eliminates the fear of catching your edges, allowing you to focus on the riding at hand. Why feel good, when you can feel better!

# MAGIC CARPET

The Magic Carpet is perhaps the most misunderstood and underrated board in the Bataleon lineup. A true twin powder board proving you don't need setback to stay floating if you have 3BT™. Plus, when the pow is tracked out, it's still more fun than your average twin. Get on the Magic Carpet and make your snowboard wishes come true.

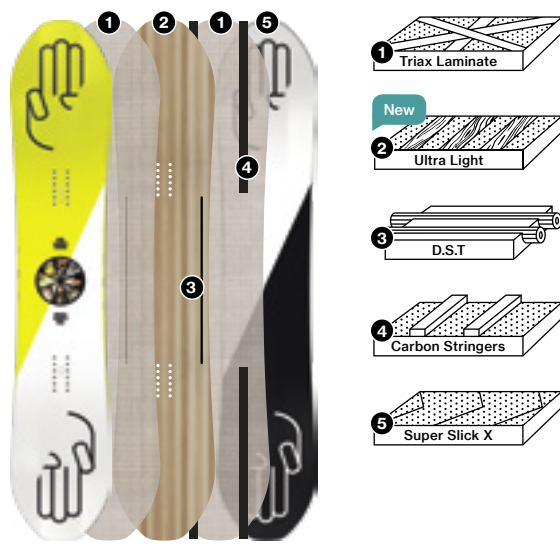

# Magic Carpet

With its huge matching 3D nose and tail, the Magic Carpet is the ultimate resort powder board. Going switch in powder has never been this fun, or easy. Ransack the sidecountry and send it on sidehits with this unique shape.

# JUST WALLIE IT

The Wallie. The very best there is. When you absolutely, positively got to kill every obstacle in the park, accept no substitutes. That's how this board works: you get yourself in trouble, the Wallie gets you out.

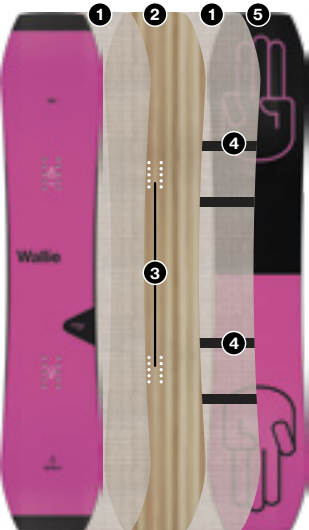

**WALLIE  
TIPS**

The Wallie is a fresh and innovative shape for jibbing and park riding. Utilizing JIB 3BT and skate inspired Wallie Tips, this board will change the way you look at the park. It's a team favorite for rail riding and has secured its place as an instant classic in the line.

Created by nature or designed by man, the most successful designs take into consideration the forces they will be submitted to. When we were developing 3BT™ we analyzed how snowboards look when put under pressure. What happens when you drive it through a transition or jam it through a turn? Triple Base happens. Triple Base is the pre-shaped form of a board in motion, and just like the wings of a plane or the hull of a boat is curved to perform, your snowboard should also be shaped for its environment.

# Shape

## Triple Base Technology

After lots of research, analyzing, tinkering, and testing, we came up with our patented 3BT™ shaping technique. All our boards feature tip to tail positive camber in combination with lifted contact points at the widest part of the board. Over the years we perfected 3BT™ to best perform for every kind of riding by fine tuning the synergies between the flat base, side bases, radii and camber.

### Flat Base Riding Initiation

The widest section of the board is lifted off the snow while riding flat based allowing you to ride straight without catching edges or needing to keep your edges engaged.

### Turn Initiation

With a small amount of pressure and angle, the sidebases start to engage near the bindings, but the pressure remains constant along the contact edge.

### On Edge

While on edge, the 3D shaped sidecut forms a complete arc with the snow, offering unparalleled and powerful edge hold.

# Shape

**1. Maximum Nose Uplift**  
The amount of base uplift reaches its maximum at the widest part of the nose creating an enhanced planing surface that cuts through rough terrain and significantly improves float in powder.

**2. Increasing Uplift From Bindings To Widest Point**  
Sidebase uplift gradually increases outside of the bindings to the contact points. The gradual rise creates smooth transition zones for turning and buttering, and the raised contact points make the board less susceptible to edge catch.

**3. Stable Centerbase No Sidebase Uplift**  
There is no base uplift under or between the bindings. This creates a stable area of control underfoot.

**2. Increasing Uplift From Bindings To Widest Point**  
Sidebase uplift gradually increases outside of the bindings to the contact points. The gradual rise creates smooth transition zones for turning and buttering, and the raised contact points make the board less susceptible to edge catch.

**1. Maximum Tail Uplift**  
The amount of base uplift reaches its maximum at the widest part of the tail increasing the pop and aiding in flotation.

We know. It sounds too good to be true but that is because Triple Base makes perfect sense. Shaping a board 3D makes every kind of snowboarding more fun.

**BOMB HILLS FASTER**

Edges create friction, retain heat and don't hold wax – all of which slow you down. 3BT™ boards accelerate faster and maintain speed when pointed straight because the lifted sidebases have a shorter overall edge contact and reduce drag. This helps you coast along cat tracks faster, clear jumps and pass skiers on powder days.

**CATCH LESS EDGE**

The uplifted edges at the contact points reduces the chance of edge catch. The sidebase lift at the contact points disperses pressure evenly along the edge, therefore allowing for a smoother, more controlled ride. This also makes the tips more forgiving for butters and more lenient on less-than-perfect landings.

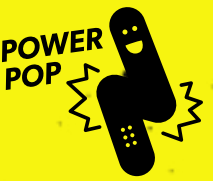

**LIGHTNING EDGES**

When laid on edge, the uplifted edge and base sections form a more cohesive arc and contact with the snow surface. A smooth and secure arc means more powerful turns. As the board is rolled side to side, the edge uplift offers a more fluid transition from edge to edge. This makes slower turns easier, faster turns more solid, and carving full circles on corduroy more complete.

**STICK MORE JUMPS**

The 3BT™ tips and contact points are less likely to dig and catch on landings. Reduced edge bite at the tips allows the board to automatically track back to going straight, meaning you can ride away from not-so-perfect landings.

**POWER POP**

The shaped tips boost the pop power of positive camber. When the tail (or nose) is flexed and compressed for an ollie the forces are directed towards the centerbase of the tail (or nose) and amplified. This gives added spring to the board's powerful camber backbone.

**FREAKY FLOAT**

The hull-like tip shape has inherent floating, planing and plowing properties similar to a boat or progressive surfboard shape. The shape allows the front to rise out of soft snow, and while making it easier to sink the tail, offering a more comfortable riding position in deep snow.

**TERRORIZE TRANNIES**

The beveled tips have less drag and generate a smoother glide up and down transitions while still maintaining control. This means faster, smoother and more predictable takeoffs and landings.

**ONE BOARD QUIVER**

3BT™ shaping gives every board universal benefits. The hull-like shape of a jib board will still float better than a flat one in pow. All our boards profit from the increased edge hold of uplifted edges.

SideKick™ Tips enhance 3BT™'s advantages like nothing you experienced before. SideKick™ dramatically increases the sidebase uplift at the widest points of the nose and tail. This makes turn initiation even smoother, increases float in powder and handling of the board in rough terrain. It has to be ridden to be believed!

SideKick™ dramatically increases the sidebase uplift just outside the widest points of the nose and tail. This makes turn initiation smoother, increases float in powder and improves handling of the board in rough terrain.

3BT™ is not a single shape, it's a shaping philosophy. Every board in the range is perfected and fine-tuned to fit specific riding characteristics. Each board is shaped with a unique three-dimensional Triple Base Profile so it rides better than other boards in its category.

Pow 3BT™

<p>Pow 3BT™ SideKick™ Directional Tapered</p> <p>Surfer Ltd. Surfer</p>	<p>Twin Pow 3BT™ SideKick™ Twin</p> <p>Magic Carpet</p>	<p>Pow 3BT™ SideKick™ Directional Tapered</p> <p>Love Powder Camel Toe</p>	<p>Pow 3BT™ SideKick™ Directional Tapered</p> <p>Camel Two</p>
---	---	--	--

Pow 3BT™ features a narrow centerbase and maximum uplift with SideKick™ in the nose. The emphasis in this shape is on floating. The oversized nose assures unrivaled float and stability in rough conditions. When it gets deep there is nothing that beats it. Make no mistake these boards hold their own on hardpack as well.

Freeride 3BT™

<p>Freeride 3BT™ SideKick™ Directional</p> <p>Party Wave Party Wave+</p>	<p>Freeride 3BT™ SideKick™ Directional Tapered</p> <p>Carver</p>	<p>Freeride 3BT™ SideKick™ Directional</p> <p>Storm Thunder</p>
--	--	---

Freeride 3BT has a narrow centerbase and substantial sidebase uplift. The focus here is on edge control and versatility. These shapes have proven to be functional and competent in all conditions. Floating better than other brand's powder specific boards yet holding an unbelievable edge while carving on slopes.

Freestyle 3BT™

<p>Freestyle 3BT™ Directional Twin</p> <p>Spirit Chaser</p>	<p>Freestyle 3BT™ SideKick™ Directional Twin</p> <p>Jam Stallion Goliath PushUp Feelbetter</p>
---	--

The sidebase and centerbase areas are equally proportionate in size with a medium uplift angle on Freestyle 3BT™. With added length in the nose, these boards are remarkably versatile for freestyle and freeride situations.

Twin 3BT™

<p>Twin 3BT™ SideKick™ Directional Twin</p> <p>Whatever Fun.Kink</p>	<p>Twin 3BT™ SideKick™ Twin</p> <p>Boss Evil Twin Distortia She W Stuntwood Minishred</p>
--	---

These boards are shaped with a wide centerbase area. The uplift angle is low and begins outside the bindings for precision control with less hang-ups. The wide centerbase offers a stable platform to press, load up ollies and put down landings.

Jib 3BT™

<p>Jib 3BT™ Twin</p> <p>Blow</p>	<p>JIB 3BT™ SideKick™ Twin</p> <p>Global Warmer Disaster</p>	<p>JIB 3BT™ SideKick™ Wallie Tips™ Twin</p> <p>Wallie</p>
--------------------------------------	--	---

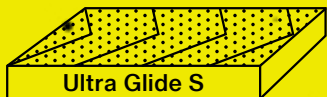

Optimized for Park riding, the centerbase on Jib 3BT™ is the widest in the range to give you extra stability while jibbing and pressing.

### Base Tech

The base is important as it's your direct connection to the snow. Bataleon boards are built with varying types of extruded and sintered bases fine tuned for different conditions and riding styles. All our boards are finished with a factory wax before they leave the factory.

The fastest base money can buy. This base is produced with ISO-Sport 7000 black racing series and is what spandex-clad dudes have on their ski boards. No joke.

Maximum molecular content for a hardened sintered base that hauls ass. More molecules mean a denser base that can take a beating using ISO-Sport 7000 series as backbone.

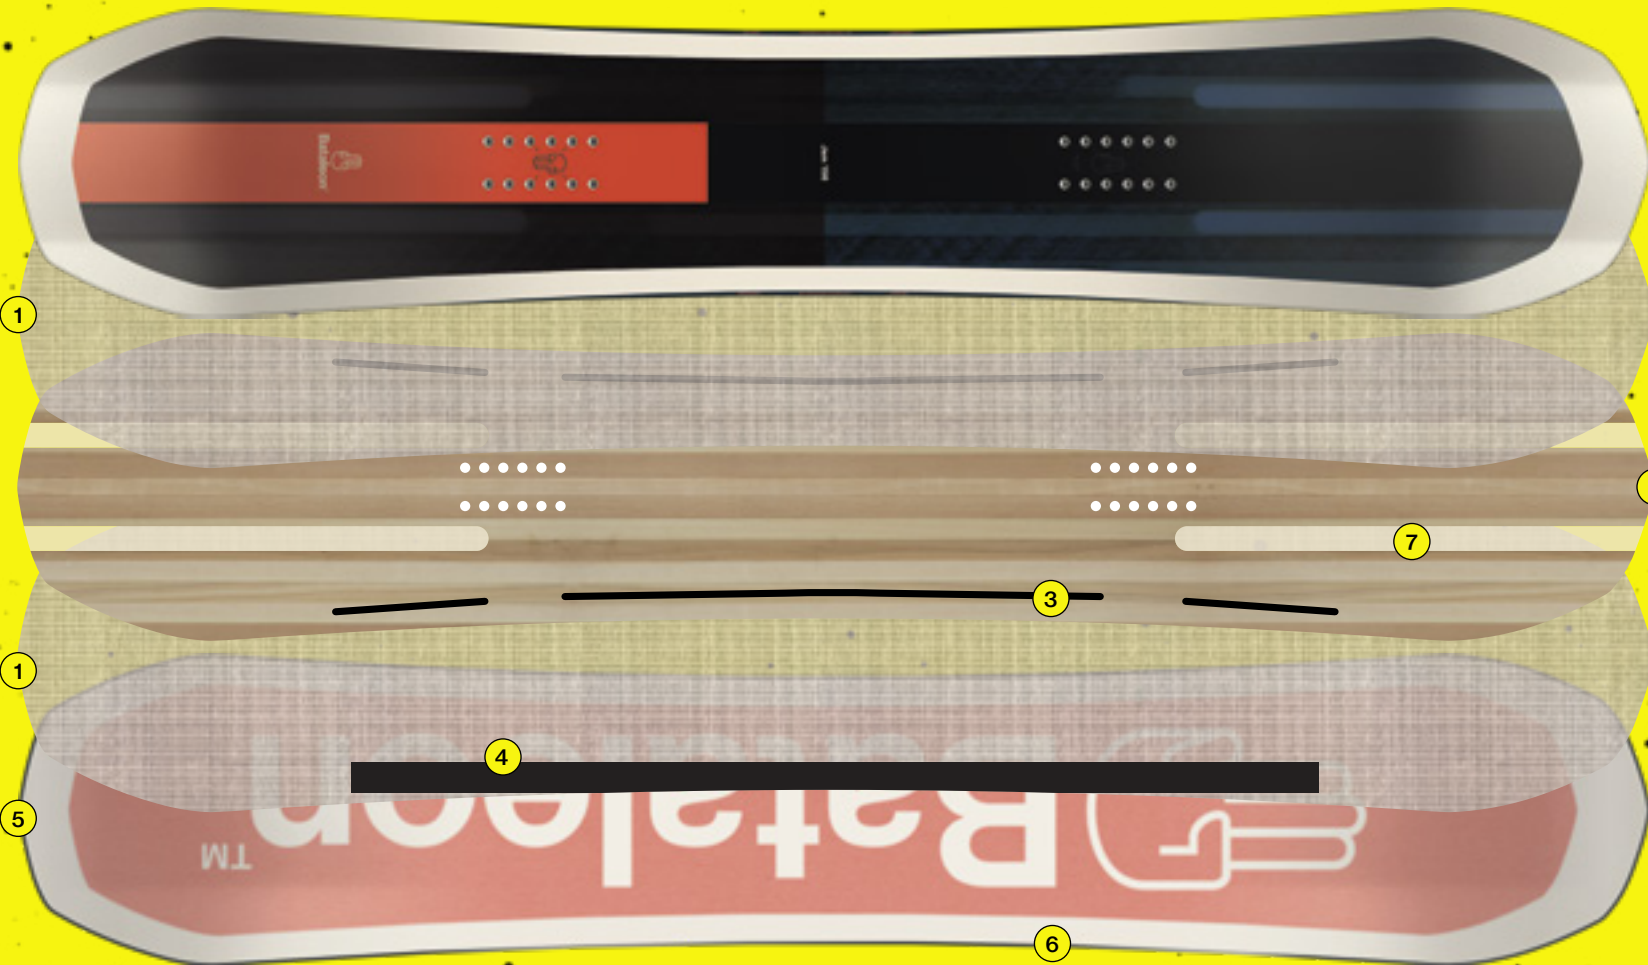

Our standard sintered base that's tough and fast, and faster when waxed.

Not a basic extruded base. It has the highest molecular content available for an extruded base. That means it's super slick, durable and maintenance-free.

Producing two or more base color options minimizes p-tex waste. That is why you will find flip flop base options on most of our die-cut bases. This means orders can be filled with either color option which makes environmental sense.

### Glassing

The type and placement of fiberglass greatly influences a board's flex and riding characteristics. Boards are built with a layer of fiberglass above and below the woodcore.

Our three-way weave of fiberglass is light, strong and responsive. We use this to beef up the flex pattern.

Our traditional and time tested two-way weave of fiberglass is light, strong and responsive; keeping the board snappy without adding torsional stiffness.

### Special Lay-ups

We use additional materials to improve specific riding traits of our boards. Carbon stringers can make a significant difference in how a board performs. By positioning strips of carbon fiber we can fine-tune the flex, pop, edge hold, response, dampening and add an extra layer of awesomeness to your ride.

Carbon is feather light and adds explosive pop, precise edge control, reactive response and smooth dampening to a board. It is used in different ways to fine-tune a board's ride characteristics.

### SuperTubes™

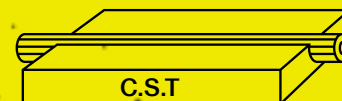

Hollow carbon core upgrades that are inserted into the core in 3 different configurations. The hollow carbon tubes greatly increase the woodcore's pop and reduce weight.

Dual Radial Super Tube

Dual Super Tube

Central Super Tube

More about SuperTubes™ on the next page...

### AirRide™

The AirRide™ core additive dampens vibrations and makes riding smoother at high speeds. It's like having a suspension system in your snowboard.

Dual Radial Super Tube

More about AirRide™ on the next page...

### Woodcore

The wood core is the soul of the board. The type of wood, the grain orientation, and the overall thickness and shaping greatly determines the way it rides. We source a number of high quality woods to create our wood cores.

Our lightest 80-20 Swiss paulownia and poplar wood blend for the lightest strength to weight ratio.

Our very light 70-30 Swiss paulownia and poplar wood blend for an unparalleled strength to weight ratio.

Our 50-50 Swiss paulownia and poplar woods blend for optimal strength to weight properties.

Full poplar with beech hardwood laid tip to tail along the inserts strengthening the board's backbone, reinforcing the inserts and producing more pop.

### Sidewall Tech

Sidewalls need to be tough while not disrupting our carefully fine-tuned flex patterns. We mostly use our tried and trusted ABS sidewalls but some models come with Shock Walls.

This is our Urethane infused sidewall technology. ShockWalls smooth out your ride and are more resistant to impact.

# Features

## SuperTubes™

Hollow carbon core upgrades that are inserted into the core in 3 different configurations. The hollow carbon tubes reinforce the camber and greatly increase the woodcore's pop and reduce weight.

Our Dual Radial Super Tube woodcore upgrade features six hollow carbon tubes parallel to the board radius for extra power transfer to the edge.

Our Dual Super Tube woodcore upgrade has two hollow carbon tubes milled into the bottom of the core to enhance pop and give the camber more snap.

Our Central Super Tube woodcore upgrade has one centrally placed hollow carbon tube milled into the bottom of the core to enhance pop without stiffening the board torsionally.

## AirRide™

The AirRide™ core additive dampens vibrations and makes riding smoother at high speeds. It's like having a suspension system in your snowboard.

Decrease chatter increase speed. AirRide™ is featured on our highest end models such as Boss, Jam, Stallion and Surfer Ltd.

## WallieTips™

Our skate inspired WallieTips will change the way you look park features and give you added confidence when approaching obstacles.

Show us what you can do with your Wallie Tips™ #bataleonwallie

## Tor Lundstrom

### Beyond Medals x Bataleon board 156, 158 Wide & 159

"I think this is the ultimate allround board. I use it in different sizes for backcountry riding, resort carving, street riding and park jumps/rails. Its got a powerful response yet not too stiff to be playful in whatever terrain."

### Surfer 159

"The closest you can get to the feeling of surfing on snow.. Love this board in deep pow but it works surprisingly good for carving too. A really different board in the most positive sense."

### Carver 158

"Extremely stiff and powerful board. With the right conditions which I would say is freshly groomed not to soft slopes this board opens up another level of carving if you can handle it. Fast and powerful."

## Klaudia Medlova

### Spirit 146

My favourite board to Cruise and hit the park and features in any conditions."

### Push-Up 146

Good board to take on the road with . This all mountain board with 3BT shaping is perfect to hit with park or backcountry.

### Love powder 148

"To ride Big powder "

## Shayne Pospisil

### Magic Carpet 156

My favorite for resort pow days especially if it gets tracked out quick. The MC handles the bumps and still gives you a smooth ride.

### Party Wave 154

The best short pow board I've ever ridden with the shorter shape allowing to make tighter tree riding fun and with the big TB3 nose you never have to worry about leaning back again.

### The Surfer 154

Fun for pow and resort groomers with the big 3BT swallow tail sit back in pow or rip turns and not have a worry.

## Shaun Murphy

### The Disaster 151

"A very fun, loose, soft jib board that's perfect for the park or the streets."

### The Global Warmer 151

"A great park and street jib board with a proper holding point for presses and a great graphic for photos"

### The Camel Toe 154

"The best all around powder hover craft, and my all time favorite powder board for cruising deep snow."

## Toshiki Yamane

### Whatever 151 & 154

"Whatever is perfect shape for me! This board need riders skill but I think all round board. Softness..poping timing..it's sooo feel good. Simply my favorite board!"

### Evil twin 154

"Evil twin is a strong park/big jump/bc jump high speed also reliable one. I'm choosing every year. It gives me great ollie pop and solid landing because of its nice waist width and flex. If you want to go big, pick Evil!"

### Magic carpet 154

magic carpet is crazy!! this is revolution!! Because it's powder board!! but no need set back. when I using that feel like a boat, it's so fun!

### GW

Its softer flex makes all your move smooth and quick even if you are riding on slow speed. Incredibly quick response is ideal for jibs and ground trick. 15m long kicker, no problem of course!

## Madison Blackley

### She.W 146 & 149

Best all around board, if I'm never sure which one to ride this ones does it all and I can take it anywhere.

### Love Powder 148

"I don't know how to surf, but this board makes me believe I can. The best feeling in deep powder and confidence to jump off anything "

### Feelbetter 146

"My go to board when i want to learn new jib tricks or get some extreme presses going. Buttery and soft get weird but stable enough that I don't twang out in landings."

## Tyler Chorlton

### Partywave

The Partywave is super fat, ultra sturdy yet soft and playful with the most insane edge grip you've ever ridden that will cut through every condition, absolute rocket launcher with fast edge to edge action for her chunky waist thanks to her 3BT! She even rides switch beautifully! "

## Ethan Morgan

### Goliath 159

One hell of a beast.

### Surfer 159

Shaka Bro!

### Evil Twin 157

That classic banger board that works for everything and everyone.

### Whatever

Whatever you want

### Wallie

Nothing is in your way, just wallie that shit

## Tobias Hjertonsson

### Global Warmer 154

Pretty soft but you can still hit the biggest things in the park. Works great in the streets to!

### Boss 154

Amazing board, pretty hard but works great all over the mountain from icy too deep pow!

### Wallie 154

Supercool graphic and so fun to jib around with. Perfect for the street!

## Ron Forth

### Boss 154

A responsive ride that will be there when you want it on the big jump/jib lines

### Camel toe 158

"The go to powder board, effortless pow turns no matter how deep the snow and a nice long nose to keep you afloat."

### Disaster 153 WIDE

"Jibbing stick. Serious flex and a big lock in spot for pressing it out in the park or street."

## Anthony Slater

### Disaster 151

"My #1 favorite, very loose and playful board that is perfect for park or the streets"

### Global Warmer 151

"All around beast. Little more sturdy if you want to hit some jumps but also great on rails in the park and the streets."

### Surfer 154

"Powder, groomers, Or slush it's the best to just carve around."

## RMB

### The Jam 159

Pretty much my go to everyday board. everything about the jam is so on point! i love stiff, aggressive boards and this is it. this is the backcountry beast.

### The One 158

The most fun all mountain board I've ever ridden. from cruising the pistes to waist deep powder, this shape is so fun.

### The Boss 157

This is my favourite all round baord, it can handle ripping hard and fast on the pistes all morning to lapping the jib line all afternoon.

### Carver 158

Blasting the piste's all day as never been more fun than when I'm ripping around on the carver, get low go fast and surf the earth!
