

ROME

Winter 25/26 Collection

Since 2001, Rome Snowboards has been All Ways Down. The message has changed over the years, but the meaning has not.

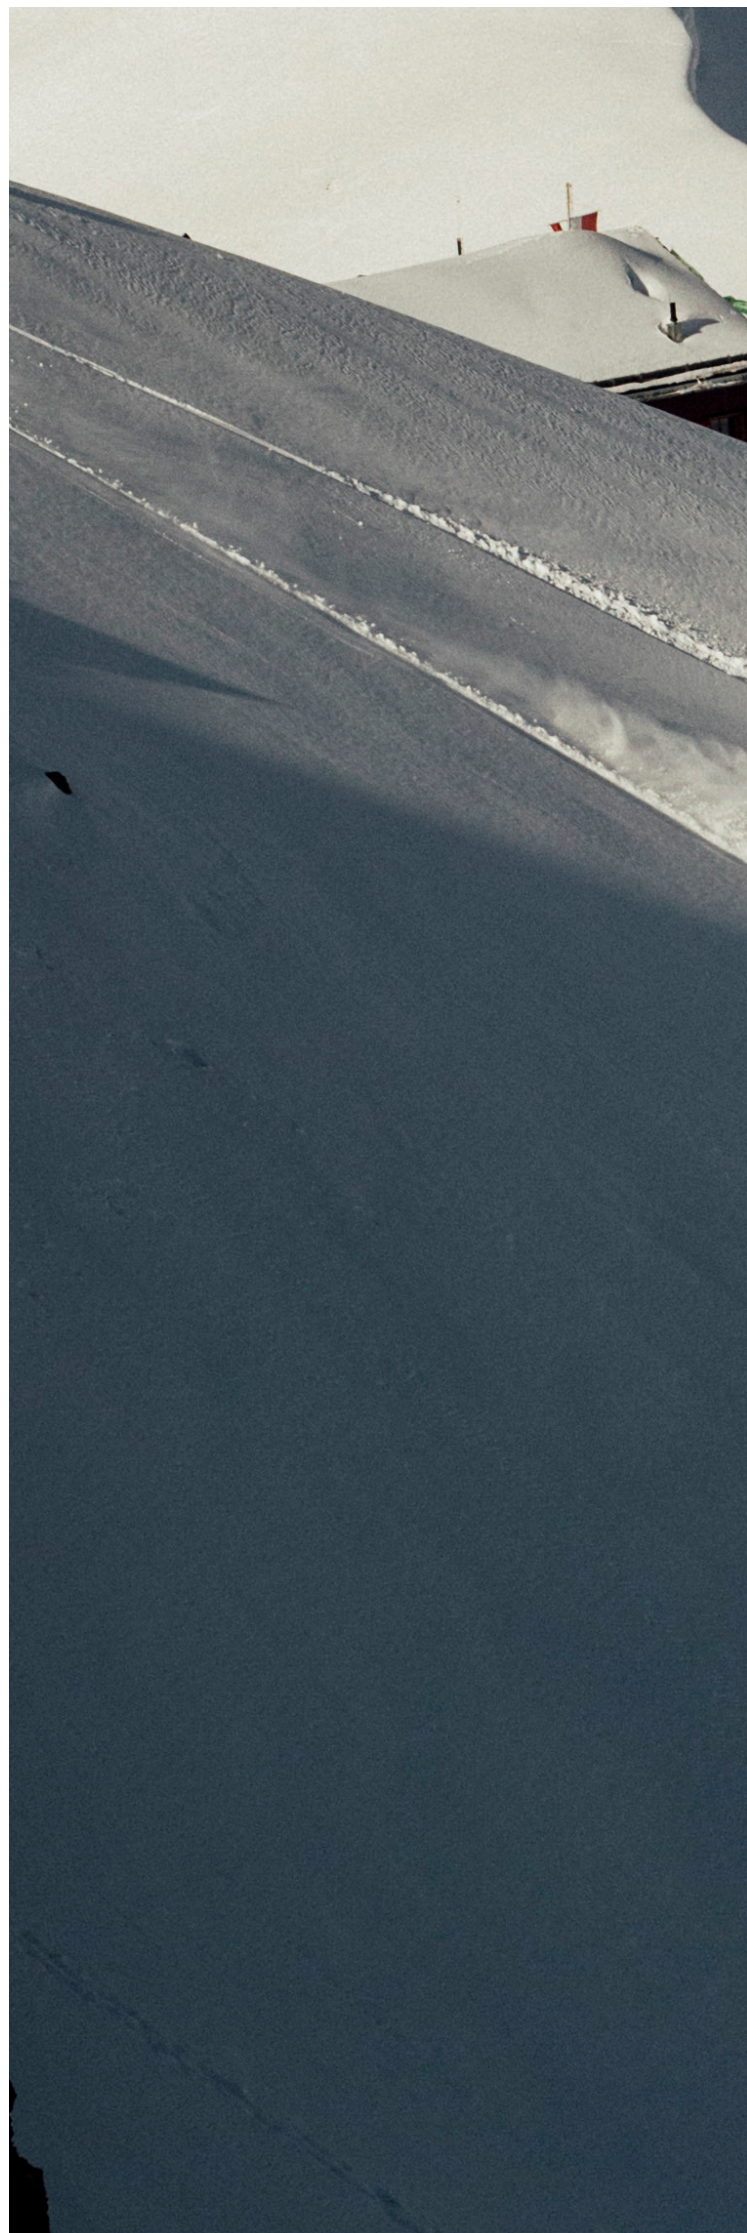

We are down for the long nights and the early mornings. We are down for shoveling the frozen steps and stomping out the in-run. We are down for the countless hours of driving just for the chance of a deep day.

We are down with snowboarding first innovations that will forever change the way we strap in. We are down for two more skip the last.

Safe to say we are down for another season of creating the best damn gear possible so that riders from every corner of the globe can tap into this passion and connection.

All Ways Down, 'til the last patch melts and the edges rust off. Thanks for riding with us.

FASE™
FAST ENTRY SYSTEM

The evolution of two-strap bindings.

A revolutionary Fast Entry System, featuring the rider-trusted performance and comfort of two-strap bindings, compatible with any boots.

After seven years of rider development, the **FASE™ Fast Entry System** combines the comfort and locked-in feeling of two-strap bindings with an ultra-fast strapping-in process. The bindings are built with three key features: the **AutoBack**, which closes automatically around the boot, the **Locked-In Toe Straps**, built to stay in the desired position, and the rider-proven **FastStrap**, for smooth one-handed strapping in.

Katana AW FASE™

Katana AW FASE™
Team

The FASE™ Advantage

FAST ENTRY

An effortless and intuitive system that allows you to strap in smoothly with one hand and optimize binding fit on-the-fly.

PREMIUM PERFORMANCE

Experience the locked-in comfort and response of a two-strap binding with the convenience of a Fast Entry System that excels in all conditions.

DURABILITY

Seven years of testing resulting in a 'mountain-proof' design, engineered for any terrain and all conditions. Fast Entry Systems offers a lifetime warranty on system-specific parts.

RIDER TRUSTED DESIGN

Engineered by snowboarders, tested by snowboarders, backed by snowboarders.

UNIVERSAL INTERFACE

Compatible with any boot model, board model, insert hole pattern and every riding style.

USER FRIENDLY

An intuitive design with same interaction method as classic two-strap bindings. The AutoBack functionality, combined with the convenience of the Locked-In Toe Strap, optimizes easy, one-handed strapping in whether stationary or on-the-go.

FASE™ Fast Entry System Components

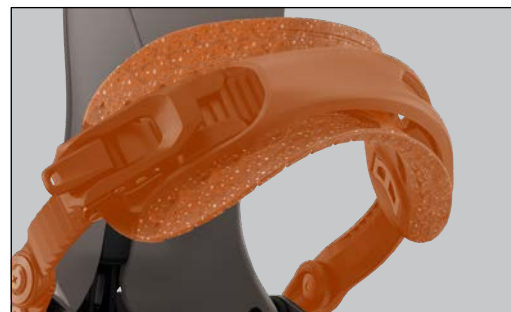

Katana AW FASE™
Team

FASTSTRAP

An innovative long ladder that remains connected for ultra-fast, one-handed strapping in. With a classic ratchet design to fine tune ankle strap tension, the FastStrap complements the AutoBack's automatic closure system so riders can strap in faster than ever before.

AUTOBACK

The key to the revolutionary Fast Entry System, the AutoBack allows for hands-free entry to the binding. This intuitive design automatically closes as the boot enters the binding and opens when it's time to unstrap. The AutoBack also folds flat for skating, chairlifts and storage.

LOCKED-IN TOE STRAP

Simply set it and forget it. Designed to remain in position to complement the Fast Entry System. The Locking Slap Ratchet 2.0 and unique tri-toothed ladders keep the strap in position for fast entry and exit, with easy on-the-fly adjustments.

Katana AW FASE™ Highback & Platform Components

PEDAL

This revolutionary part is the key to the FASE™ Fast Entry System. The Pedal acts as a pressure-sensitive lever that raises the highback to your boot as you enter the binding.

Backed with a Lifetime Warranty.

HUB

Created to seamlessly integrate the FASE™ Fast Entry System with our industry leading forged aluminum AsymWrap chassis. Made with performance-injected nylon, the Hub provides impact absorption, reduced chatter and a smooth pivot surface for the highback to rotate on.

ASYMWRAP

Built on the same DNA as our game-changing AsymWrap Chassis, the FASE™ AsymWrap HeelHoop is notched at the back to accommodate the Pedal.

FORWARD LEAN

The new Forward Lean Adjuster designed specifically for the FASE™ System. The FLA has three positions of forward lean to help riders adjust heelside response.

AXLE

Housed within the Hub and Pedal, the Axle is a reinforced steel pin that serves as the central pivot point for the FASE™ Fast Entry System.

Katana AW FASE™ Strap & Footbed Components

PIVOTMOUNT

A new take on our game-changing PivotMount technology, this new design allows for four different ankle strap positions on the new FASE™ System. The redesigned interface uses a gear like geometry to maintain and hold FastStrap ankle strap positioning.

NEVER MISS A DAY

S#! happens, but with these parts you can keep riding no matter where you are. Our FASE™-specific Never Miss a Day kit is designed to keep you moving with the hardware necessary to alleviate any issue on the fly.

HEEL PAD

An EVA pad designed for impact absorption and comfort. Located below the Heel Pad, there is a pocketed pad, adding further impact absorption and comfort to the binding.

MINI DISK

A traditional mini disk design for minimal footprint on the board. The disk interfaces with the footbed screw to keep the footbeds fully secured to the binding.

SLIDER FOOTBEDS

The Slider Footbeds feature two-degree canting and are two-part design with an injected nylon topsheet, making it easier to slide your boot into the binding.

Universal, Effortless Entry and Exit

With the AutoBack and FastStrap fully open, a wide opening ensures effortless entry regardless of boot brand and style.

Open Position

Closed Position

Kicked Down Position

ENTRY GUIDE

OPEN MODE

Wide entry, all ways down.

Hint: Kick the AutoBack forward to fold it flat for skating, chairlifts and storage.

STEP 1

Insert your boot into the binding and engage the toe strap.

The AutoBack automatically closes around your boot while the Locked-In Toe Strap remains in desired position.

STEP 2

Buckle down the FastStrap ankle strap.

Because the ankle ladder strap is already engaged, only one hand is required to strap in to your preferred flex.

EXIT MODE

RIDE MODE

Snug fit for optimized security and ultra-responsive performance.

STEP 1

Simply unbuckle the FastStrap ankle strap like a traditional two-strap binding.

Reminder to stop when the FastStrap catches to stay secure for easy re-entry.

STEP 2

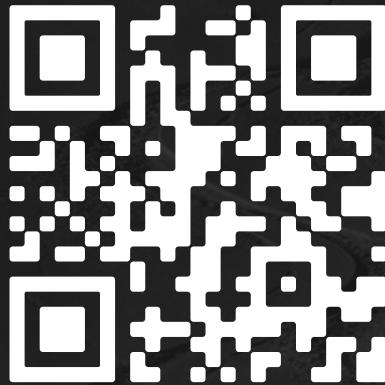

Bend your knee slightly, lift your heel and exit the binding.

The AutoBack automatically opens for ease of exit.

Binding Technology

PLATFORMS

ASYMWRAP

Our game changer of a chassis that revolutionized the idea of connected comfort. The AsymWrap heelhoop features three connection points to the baseplate, allowing for a surfy ride and plenty of board feel, without sacrificing tweakability or edge-to-edge response.

FULLWRAP

Our bombproof FullWrap Platform features a heelhoop with four connection points to the baseplate for maximum energy transfer and pure connected power. Built with more lateral support than the AsymWrap platform, FullWrap bindings are designed for advanced stability, durability and power.

HEELWRAP

Our HeelWrap Platform is designed for foolproof simplicity with a supportive, ride-anything flex. This design features an adjustable forged aluminum heelhoop with two points of connection to the baseplate. This allows the baseplate to interact directly with the board, helping absorb chatter while still providing plenty of response.

BINDING FAMILIES

A reimagined, tiered restructure of our binding collection; broken down into families, driven by adjustability and platform technologies.

KATANA FAMILY

The Katana Family is designed for riders who demand the highest levels of performance, response and adjustability. Our lightest and most adjustable bindings, the Katana Family features PivotMount to dial in the perfect position, ProGrip Toe Straps and the all-new OmniFlex Ankle Straps, introducing the next chapter of AuxTech®-powered connected comfort.

TRACE & HYDRA FAMILY

Spanning across our AsymWrap and HeelWrap Platforms, the Trace & Hydra Family offers riders a minimalist approach to all-mountain performance. Powered by ProFlex Ankle Straps, ProGrip Toe Straps, the adjustability of Kink Ladders and easy-flexing highback designs, the Trace & Hydra Family is the approachable binding collection for progression-oriented riders.

ADJUSTABILITY

FLEX

TERRAIN MAP

Park

All-Mountain

Powder

ADJUSTABILITY

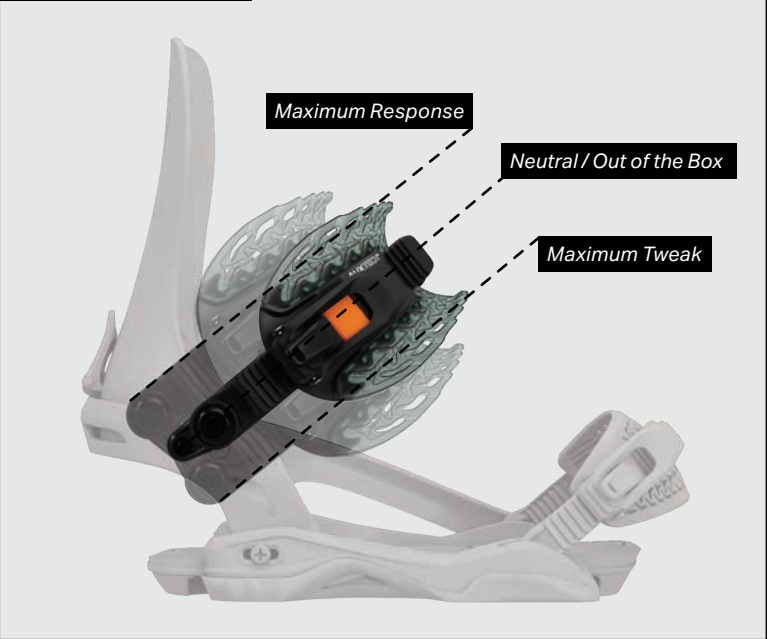

Adjustable bindings ride better.

PIVOTMOUNT

A Rome-exclusive binding innovation, PivotMounts allow you to adjust the position of the ankle strap on your boot with 8 different locations per side of the strap; the higher the strap sits, the more locked-in and powerful the feel; the lower the strap sits, the more playful and surfier the ride.

PIVOTMOUNT

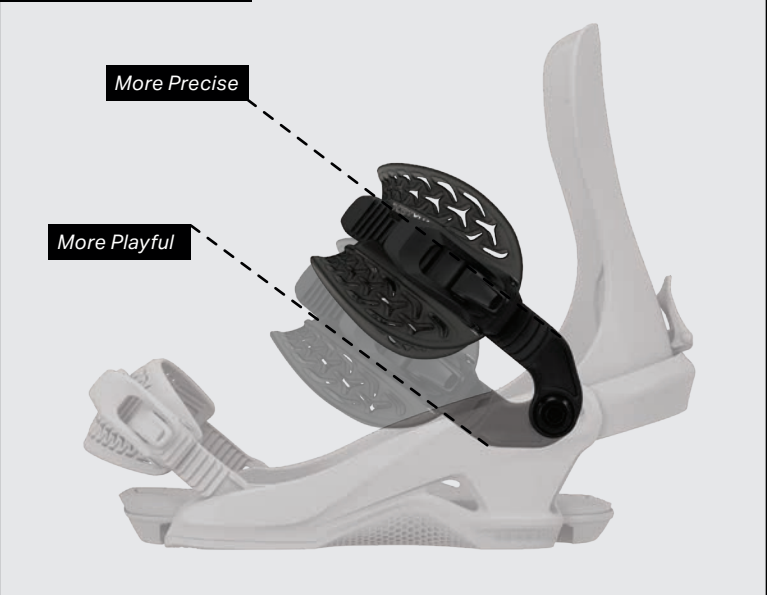

KINK LADDERS

Kink Ladders are designed to allow riders to choose from two different ankle strap positions on the boot; ride it up for a more powerful feel or drop it low for a looser ride.

KINK LADDERS

HIGHBACK ROTATION

Adjusting the highback's angle to mirror the angle of your heelside edge allows for maximum power transfer.

HIGHBACK CANTING

Adjusting the highback's angle to mirror the angle of your lower leg increases connected comfort and stability.

ADJUSTABLE BASEPLATES

Created to streamline sizing adjustments for a better fit on a wider range of boot models and sizing.

STRAPS AND CONSTRUCTION

ANKLE STRAPS

OmniFlex Ankle Straps (NEW)

The next generation of AuxTech®-powered connected comfort comes in the form of our most responsive ankle straps. A solid state overmolded design engages with a TPU spine to perfectly blend responsive torsional flex and edge-to-edge power.

UltraFlex Pro Ankle Straps

Built with an open-edge 3D Auxetic pattern and molded onto a spine for unprecedented levels of locked-in hold and tweakability.

ProFlex Ankle Straps

A medium-flexing ankle strap designed to provide a snug, reliable feel, of course featuring AuxTech®.

PureFlex Ankle Straps

A lightweight, one-piece strap, with a minimal footprint; built for riders of all ability levels.

TOE STRAPS

ProGrip Toe Straps

Our game changing strap built with the legendary hold of AuxTech®, this one-piece design provides next-level locked-in hold and undefeated comfort.

PureGrip Toe Straps

A lightweight, one-piece design for durability and a snug hold.

MATERIALS

OMNIFLEX ANKLE STRAP

AUXTECH®

AUXTECH®

Hinged patterns for next-level connected comfort.

A Rome-first innovation, AuxTech® is a game changing pattern used in ankle and toe straps. Auxetic patterns are geometric patterns that are essentially a network of tiny hinges that expand evenly when pressure is applied. Best-in-the-game surface area pressure distribution and connected comfort: that's AuxTech®.

COMPOSITE CONSTRUCTION

30% Carbon

A powerful and hyper-responsive boost of carbon for hard-charging bindings.

15% Glass

A mellow and medium-flexing feel for a smooth ride.

30% Glass

Responsive and stable, designed for a versatile and predictable ride.

100% Nylon

A versatile feel for reliable, ride-anything performance.

BOMBPROOF BUCKLES

BombProof Buckles

A one-piece forged aluminum construction for better grip and durability.

FORGED ALUMINUM

Forged Aluminum

Strength and durability, while staying lightweight and versatile, comes in the form of forged aluminum in the heelhoop.

Boards
Ride Better

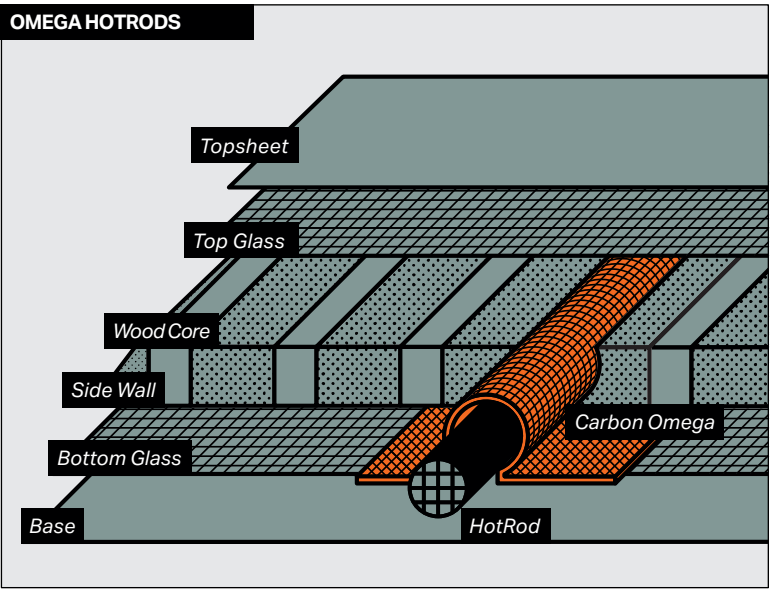

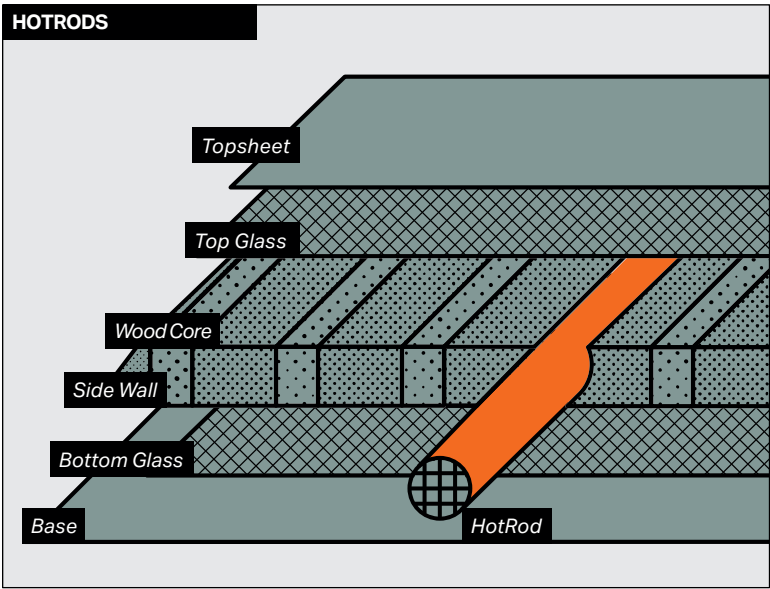

ALL WAYS DOWN

Board Technology

HOTRODS

Redesigned and enhanced for even more response.

We went back to the drawing board to redesign the way HotRods interact with the boards' core to ensure each ride is as responsive, poppy and powerful as possible. By fine-tuning the construction of our cores, the engagement of HotRods has been enhanced to help riders react quicker, ollie higher, ride out of deep landings and hold an edge no matter the conditions.

HOTRODS

A redesigned approach to pop and response.

HotRods are used in a variety of shape-specific configurations. Each configuration is designed to complement a board's specific riding style by providing additional responsiveness where the board needs it.

Carbon HotRods
Super responsive and powerfully snappy.

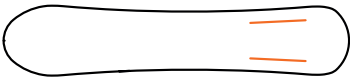

Bamboo HotRods
Pressable and playful with plenty of pop.

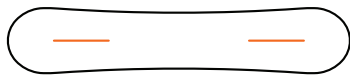

Directional Single
All-mountain stability at speed and in and out of turns.

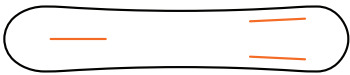

Twin Double-V
Freestyle oriented responsiveness and maximum ollie power.

Directional Double
Built for ollie power, stability exiting turns and reliable backseat riding.

Twin Single
Torsional flexibility; pressable yet reliable all-mountain charging.

Directional Triple
Versatility, reactivity and all-terrain mobility.

OMEGA HOTRODS

Unleash the power of carbon.

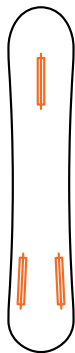

Omegas are sleeves of carbon that are wrapped around the HotRods, forming the shape of the Greek Omega. Omegas provide additional lines of carbon-fueled pop and responsiveness to a board.

Carbon Omega HotRods
Other-worldly response with our most powerful snap.

Bamboo Omega HotRods
The perfect blend of power and playfulness.

Directional Triple

Directional Double

Twin Single

SIDECUTS

Redefining responsive snowboarding.

RADIAL

Tried and true single radius sidecut. Reliable and consistent, this sidecut style supports every type of rider through all terrain.

Featured on: Rene-Gade, Stale Crewzer, Freaker, Muse, Warden, Agent Pro, Agent, Hype Pro, Hype, Artifact Pro, Artifact

BI-RADIAL

Utilizing a tight radius at the tip and a wide radius at the tail, this sidecut design allows for effortless initiation at the start of your turn, with powerful acceleration through the end of it. Bi-Radial sidecut maximizes your experience on short/wide board shapes by optimizing the natural progression of your turn shape and increasing grip from start to finish.

Featured on: Stale Fish, Service Dog

FLAX

The lightweight super fiber.

Flax is a natural, lightweight, woven textile material that we use in our boards to add rigidity or impact-dampening properties. Flax is an extremely versatile, organic material that adds unique effects to a board's construction; when laid vertically, it is extremely rigid; when laid up horizontally, it provides advanced impact dampening.

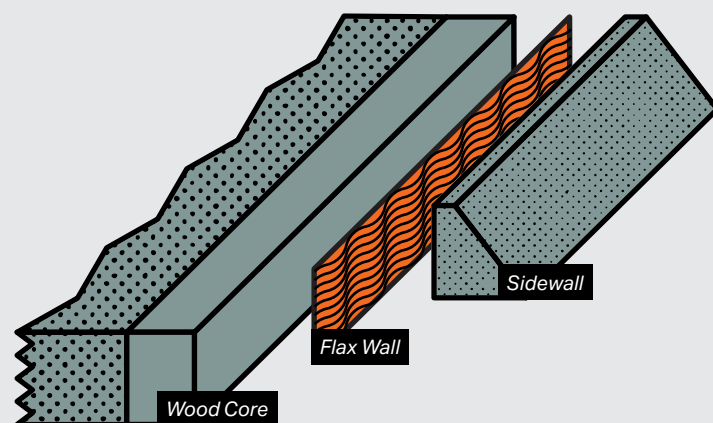

FLAX WALLS

Flax Walls are an I-Beam-shaped sidewall reinforcement. When used in a vertical arrangement between the core and the sidewall, Flax Walls create rigidity and stability. We use strategic mapping to inlay Flax Walls in two configurations, Directional and Twin.

Directional featured on: Ravine Pro, Stale Fish

Twin featured on: Rene-Gade, Agent Pro

FLAX WALLS

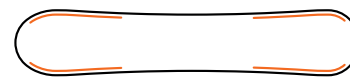

DIRECTIONAL FLAX WALLS

Directional Flax Walls are used in the noses of all-mountain boards providing additional stability and power to handle steep terrain and the impact associated with all-mountain riding.

TWIN FLAX WALLS

Twin Flax Walls are used in freestyle-oriented boards to provide strength in the nose and tail, helping to load ollies and absorb deep landings at high speeds.

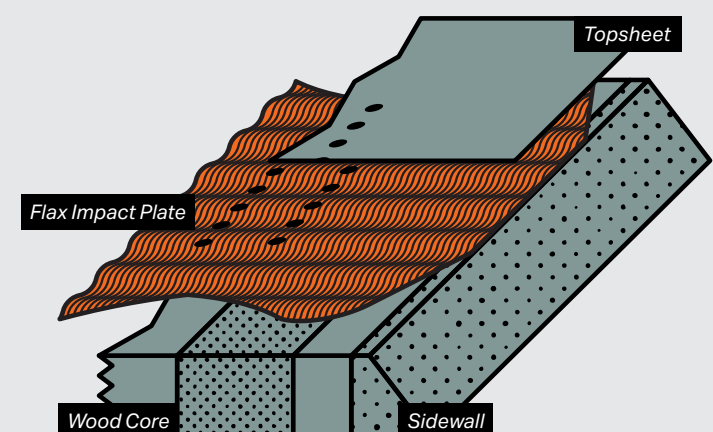

FLAX IMPACT PLATES

Flax Impact Plates are woven flax mats that are housed around the board's insert packs, sandwiched between the core and topsheet. This horizontal layup works to withstand deep landings, distribute impact in variable conditions and increase the board's overall lifespan without dramatically changing the board's flex.

Featured on: Ravine Pro, Rene-Gade, Stale Crewzer, Agent Pro, Party Mod, Boneless, Artifact Pro

FLAX IMPACT PLATES

DIAMOND 3D

A smooth ride no matter the conditions.

Our Diamond 3D is designed for edge-catch-free riding and crazy float in powder. The secret sauce of Diamond 3D is a wide, flat running section in the middle of the board, with a gradual three-dimensional curvature. This means the board is stable when riding flat-based and initiates turns with ease, while floating like a yacht in deep snow.

DIRECTIONAL DIAMOND 3D

Found only in the board's nose, Directional Diamond 3D is used on our directional boards to help float in deep snow and crank long, smooth turns. Built for premium pow performance, while still being reliable on groomers.

Featured on: Ravine Pro, Ravine, Women's Ravine, Stale Fish, Service Dog

TWIN DIAMOND 3D

A gradual three-dimensional rise in both the nose and tail provides playful response and turn-initiating speed, while staying super stable edge-to-edge. Twin Diamond 3D is also featured in progression-oriented boards to make it virtually impossible to catch an edge.

Featured on: Boneless, Mechanic, Royal, Slapstick, Minishred

DIAMOND 3D

DOUBLE KICK

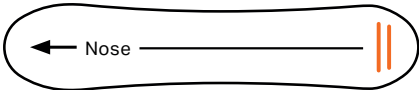

Double Kick is an aggressive, two-part rise in the board's nose and tail. Built to lock into presses, ride away from sketchy landings and chuck roost in powder, Double Kick provides power no matter the type of riding.

DIRECTIONAL DOUBLE KICK

New for 25/26, we took our press-happy Double Kick and gave it a directional treatment. The two-part rise provides stability in the tail for added power in deep snow and forgiveness when landing backseat.

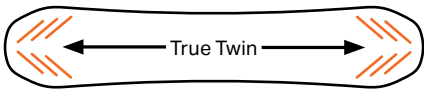

Featured on: Service Dog

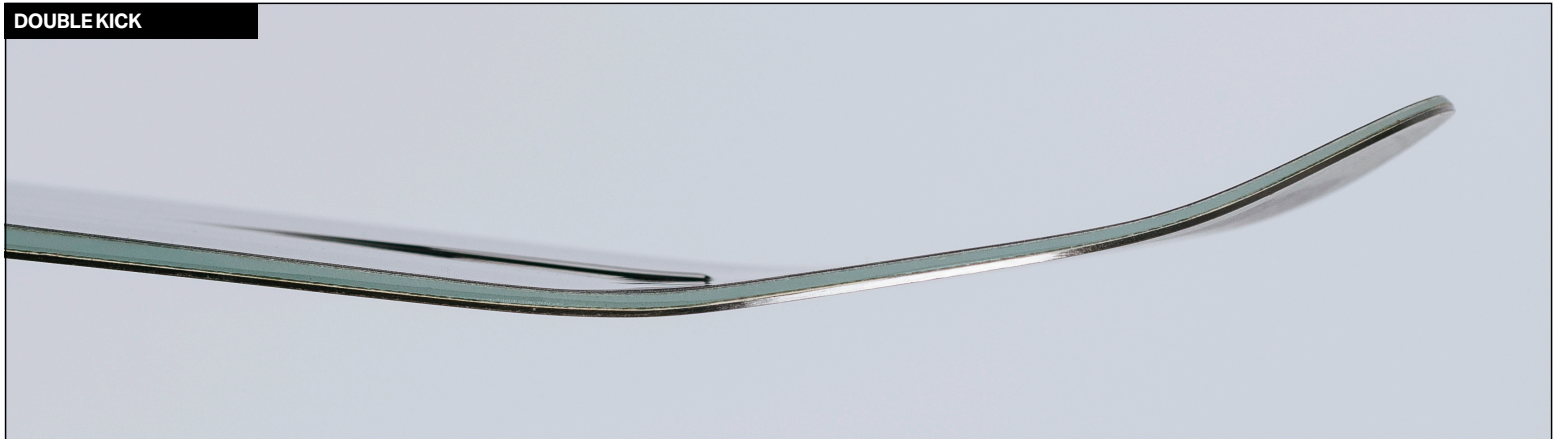

TWIN DOUBLE KICK

Butter with ease, press for days and ride away from damn near anything. Double Kick makes all types of park riding more fun.

Featured on: Agent Pro, Agent, Hype Pro, Hype, Artifact Pro, Artifact

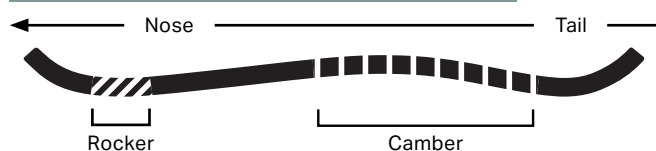

DOUBLE KICK

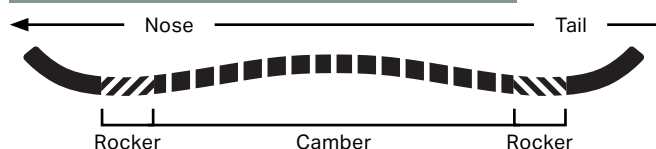

CAMBER & SHAPING

FREE-THE-RIDE CAMBER

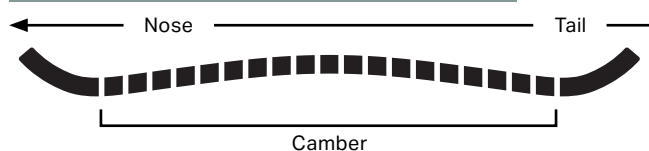

Designed for all-mountain prowess and float in the deep. Rockered in the nose, flat under the front foot, with a positive cambered tail.

FUSION CAMBER

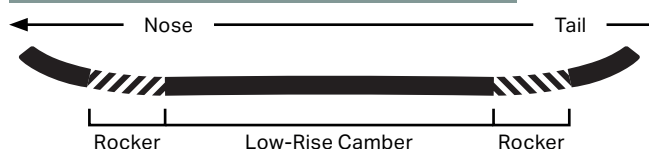

Positive camber with small pockets of rocker at the contact points; the modern go-to for versatile, all-mountain performance.

STAY POSITIVE CAMBER

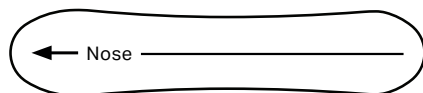

Powerful and predictable; tried-and-true camber.

CONTACT CAMBER

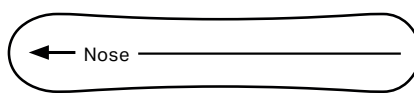

Low-rise camber between the bindings with rocker outside; smooth flexing and pressable.

SHAPING

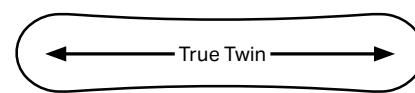

Directional

Boards with significantly longer noses than tails, typically featuring taper, to help stay nimble and float in deep snow. Directional boards feature camber profiles that are oriented for all-mountain riding.

Directional Twin

Boards with slightly longer noses than tails, that feature symmetrical camber profiles. Directional Twin boards are well-suited for riding switch and all-mountain marauding.

True Twin

Boards built with fully symmetrical specs; sidecuts, flex patterns and nose and tail lengths. True Twin boards are great for freestyle riding and progression.

MATERIALS

BASE MATERIALS

SinterSpeed Base

Our premium sintered base built for high performance and high-speed riding.

SinterStrong Base

Our versatile, low-maintenance, ride-it-all sintered base.

PowerSlide Base

Our high-end, durable, 'faster than you'd expect' extruded base.

Impact Base

Durable, fast as hell and easy to fix.

CORE MATERIALS

SuperPop Core

Our lightest and most responsive core, built with alternating strips of 10mm wide Poplar and 20mm wide Paulownia.

Pop Core

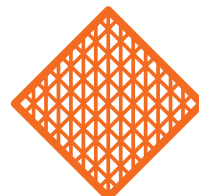

Our most versatile and durable core, built with alternating strips of 20mm wide Poplar and 20mm wide Paulownia.

Stomp Core

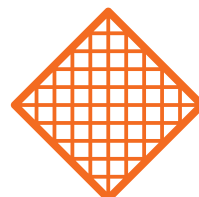

Our most stable and predictable core, built with 100% Poplar construction.

GLASS LAMINATES

Triax Glass Laminate

Fiberglass running in three different axes, built for torsional rigidity and added snap.

Biax Glass Laminate

Fiberglass with two different axes, built to be more torsionally playful and pressable.

BINDING	All Models Except Youth	S					**														
							M/L					**									
												L/XL					***				
** Depends on boot/binding style and/or brand—safest to upsize. Rome recommends checking the boot-to-binding fit with an adjusted binding. This chart serves as a guideline. At Rome we believe that adjustability matters—center your boot for the performance and feel that snowboarding demands.																					
*** HeelWrap L/XL binding models recommended for size 13-14 US.
