Bataleon

At Bataleon, evolution and progression have always been our #1 priority. Every season we level up - not just our product, but also as a brand. The founders are still at the helm, but today Bataleon is driven by a young, creative team of designers, engineers, team riders, and marketers who keep us moving forward into the future.

2026/2027 is our biggest leap yet.

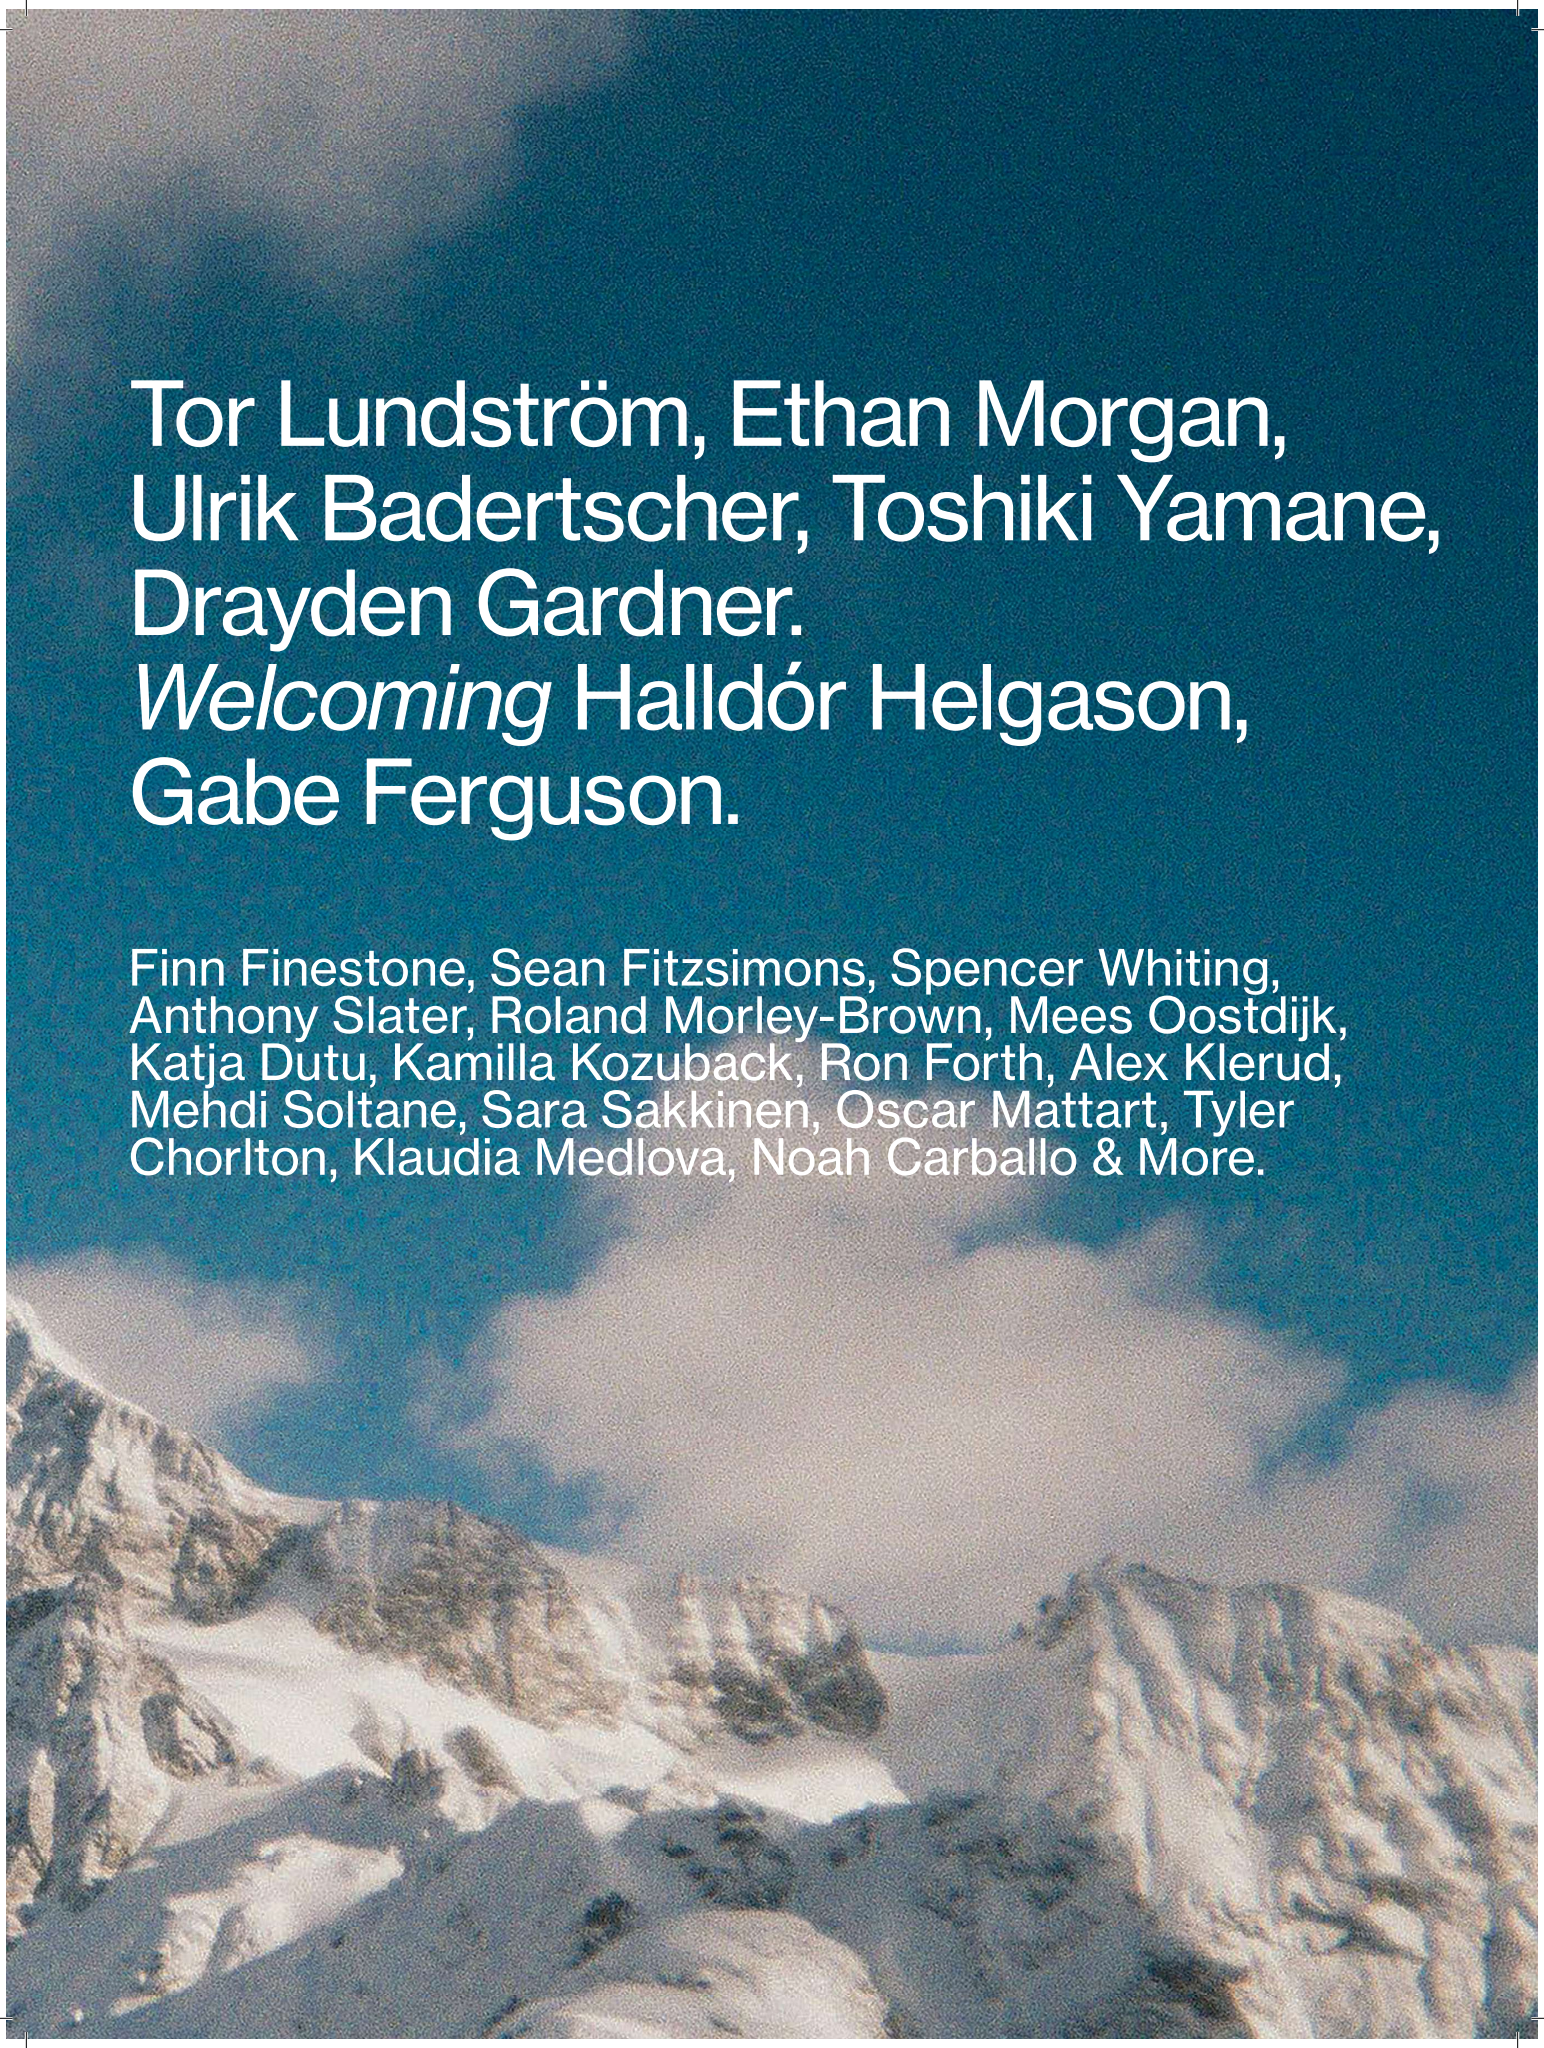

Bindings: Back in the day, we would've laughed at the idea of making a "fast entry" system. Now? We're leading the FASE® revolution - first with women's specific models and then with multiple chassis options - our all-new Ghost FASE® models, bringing a freestyle-driven design to the snowboard market, built to be accessible for everyone.

Boots: We've packed the 2627 lineup with new features, upgraded liners, fresh BOA® H5 coilers, and revamped patterns on fan favorites. The biggest win is the TWIST - now with dual BOA® dials, it's hands down the market's best value boot.

Snowboards: Bataleon's heart and soul. For more than twenty years, we've built the world's most extensive 3D collection, and we're still innovating. We've added two fresh 3D shapes to the collection, bringing a modern edge to our proven technology, which now appears on the Tornado and the Stereo family of boards.

If you're familiar with the brand, you know that we did not stop there. With everything we've learned about all three dimensions over the past twenty-two seasons, we challenged ourselves to build the best-performing 2D snowboard on the market. The result? The all-new Placebo.

The future of snowboarding is here - Bataleon's most versatile, most progressive collection ever.

Tor Lundström, Ethan Morgan, Ulrik Badertscher, Toshiki Yamane, Drayden Gardner.
Welcoming Halldór Helgason, Gabe Ferguson.

Finn Finestone, Sean Fitzsimons, Spencer Whiting, Anthony Slater, Roland Morley-Brown, Mees Oostdijk, Katja Dutu, Kamilla Kozuback, Ron Forth, Alex Klerud, Mehdi Soltane, Sara Sakkinen, Oscar Mattart, Tyler Chorlton, Klaudia Medlova, Noah Carballo & More.

Notes

Innovation Drives Freestyle Progression.
From new tricks to modified features and product breakthroughs, progression is what pushes the culture forward. That same spirit has guided the brand and Ethan Morgan since we all started rocking together over a decade ago, and it still does today. Add Halldór Helgason into the mix, and we were immediately onto something.

Enter the Stereo – a family of snowboards that introduces both a new construction approach and an evolution of 3-dimensional shaping. The new HyCap Construction blends the best of both worlds: full cap construction through the contact length for energy and precision, with durable polyurethane sidewalls at the tip and tail for added impact resistance. The result? A lightweight, responsive board that locks into turns with confidence and holds up to the abuse that is freestyle riding.

On the Stereo, we've refined our 3D shaping story. Our engineers developed our latest 3BT™ base contour in tandem with a new tri-radial sidecut and paired it with SideKick™ technology. The result is smoother edge-to-edge transitions, quicker response, and fewer hangups - playful when you want it, powerful when you need it.

If Ethan and Halldór are down, we all are.

New

Stereo Team

If Ethan and Halldor are down...
we're all down.

Redesigned for 2027, Tor Lundström's signature model, the Tornado, is a flagship model for Bataleon and his ultimate co-pilot when it comes to riding larger terrain. A bit more aggressive in flex than in years past, the new Tornado features an all-new shape, tri-radial sidecut, and our new SideKick™ 2.0 - finding the perfect marriage of power and playfulness.

Notes

Classic Feel with a Bataleon Touch.
An all-new experience from Bataleon Snowboards. All the bells and whistles you'd expect from the mad scientists in our board lab - just with one fewer dimension than what we're known for. The Placebo is built on a two-dimensional (read: flat) base platform, because not everyone is looking for a 3D snowboard – and that's okay. So we built a flat board, the Bataleon way.

3BT™ & Shaping

Every snowboard in our collection features positive camber from tip to tail, and all 3BT™ models are paired with lifted contact points at the widest sections. This design minimizes the risk of edge catches while maintaining a lively, responsive feel. After years of research, experimentation, and testing, we've perfected the seamless integration of the snowboard's base with both the camber and sidecut radii.

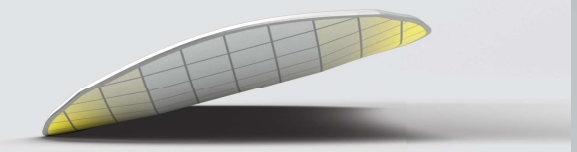

3BT™ Dynamics

Straight Lines
Bomb straight lines with enhanced stability and control.

Turn Initiation
Easily initiate turns for a smooth and responsive riding experience.

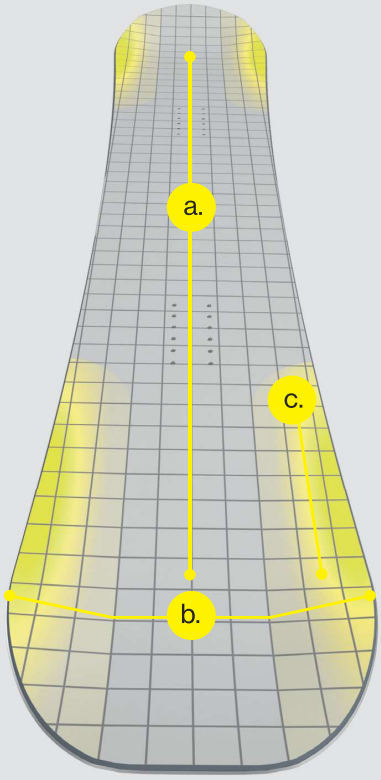

On Edge
Enhanced experience on-edge, with the 3D sidecut forming a complete arc on the snow.

Stomp More

Smooth Turns

Freaky Float

3BT™ Shaping

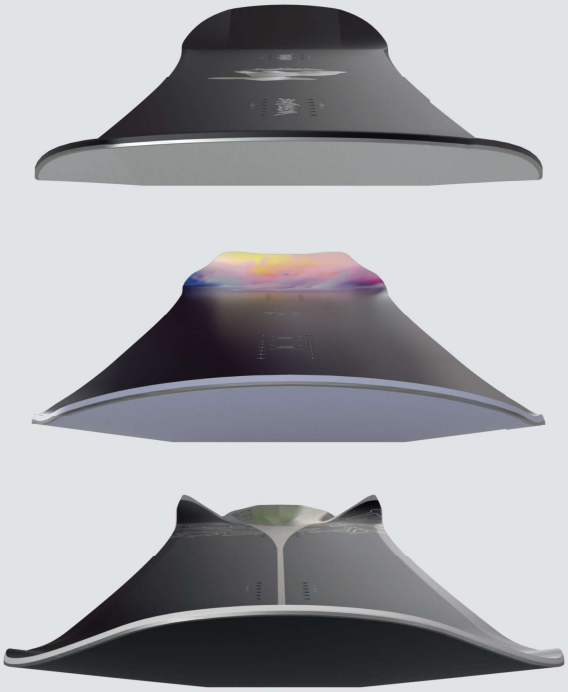

a. Tip - to - tail positive camber delivers pop and responsiveness, creating dynamic riding characteristics.

b. Lifted points at the widest part of the board provide a smoother, more forgiving ride.

c. Gradually increasing side base uplift ensures ultra - smooth turns and superior edge hold.

3BT™ | TRIPLE BASE™ TECHNOLOGY

Triple Base Flavors

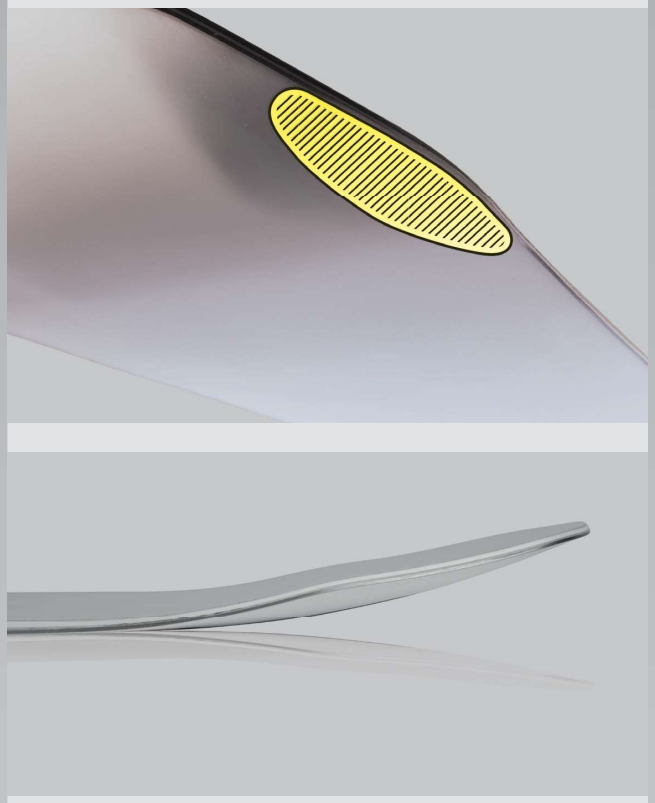

Triple Base Technology™ is not just a single shape but a design philosophy. For each model in the collection, we determine the optimal 3D shape based on the terrain and the type of rider.

To create the optimal 3BT™ Shape for each snowboard, we always look at the board's intended terrain and the following factors:

- Width of the center base
- Height of the sidebase uplift
- Starting point of the sidebase uplift
- Balance of sidebase lift between the nose and tail
- Ideal camber profile

Sidekick™

By increasing the sidebase uplift just beyond the widest points of the nose and tail, SideKick™ gives the tips of the snowboard a hull-like shape, improving float in deep snow and effortlessly cutting through crud. It also enables the board to roll smoothly and quickly from edge to edge.

SIDEKICK™

Special Sauce

Bataleon snowboards are crafted with the finest materials available. Backed by years of research and development, we carefully select the optimal components for each model and customize the construction to match its specific riding characteristics.

AirRide™

AirRide™ consists of targeted channels in the woodcore filled with urethane, designed to dampen vibrations and provide a smoother ride at high speeds. It's like having a built-in suspension system for your snowboard.

AIRRIDE™

SuperTubes™

SuperTubes™ are hollow carbon cylinders that are inserted directly into the core. They reinforce the camber, reduce weight and significantly increase pop. By varying their placement, we can further fine-tune the board's performance.

We offer them in three different configurations:
(a). C.S.T (Central SuperTube™) - A single SuperTube™ down the middle of the board enhances pop without adding torsional stiffness to the board. Great for freestyle riding and jibbing.
(b). D.S.T (Dual SuperTube™) - This means that there is a SuperTube™ on running vertically alongside each rail of the snowboard - providing more pop and snap.
(c). D.R.S.T (Dual Radial SuperTube™) - Similar to DST but with four extra Super Tubes (six in total) running alongside the rails of the snowboard, delivering extra energy directly to the edges.

(a). C.S.T. (b). D.S.T. (c). D.R.S.T.

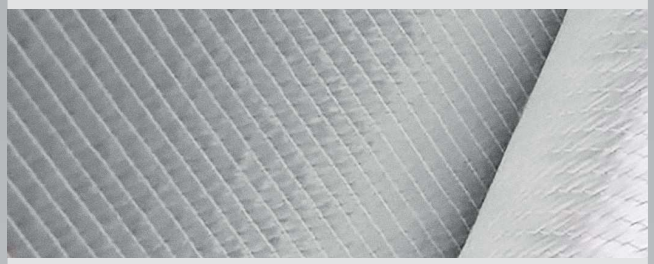

Bataleon
Bataleon

Construction

Bataleon snowboards are crafted with the finest materials available. Backed by years of research and development, we carefully select the optimal components for each model and customize the construction to match its specific riding characteristics.

Fiberglass

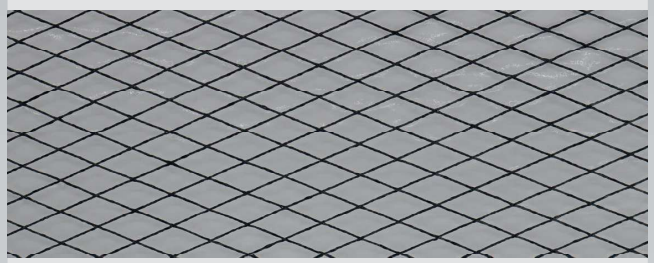

Our snowboards are built with a layer of fiberglass above and below the wood core. The type of fiberglass we use and the way it's placed have a huge influence on the board's flex pattern and the way it feels underfoot.

Triax Laminate
Our three-way fiberglass weave is light, strong and incredibly responsive. We use this to beef up the flex pattern on our more aggressive boards.

Biax Laminate
A traditional two-way weave that is light, strong and playful; it keeps the board snappy without adding torsional stiffness, which is great for creative riding.

X-Ply Laminate
A synthetic fiber known for its strength and durability, this aramid diamond weave increases the snowboard's torsional stiffness without adding extra weight.

Woodcore

The soul of any snowboard. We source a number of high-quality woods to build our cores. The type of timber, grain orientation, and top - to - tail thickness will greatly determine your new board's character.

UltraLightCore
A 1:2 blend of Poplar and Paulownia that delivers exceptional strength-to-weight ratio.

LightCore
2:2 Poplar/Paulownia blend to create a balanced core that's lively yet strong.

CoreCore
Full poplar with hardwood beech stringers to strengthen the board's backbone, reinforce the inserts and increase pop.

PopCore
100% poplar - traditional core design that draws on the strong, springy qualities of this mid-hardwood from tip to tail.

Bases

The base of your snowboard is crucial, as it's the direct connection to the snow. We use sintered bases on all of our snowbaords to ensure optimal perforamnce. Each and every Bataleon snowboard is factory-waxed before hitting the shelves.

NanoHighSpeed S
The fastest base money can buy, produced using race - grade ISO - SPORT 7000 P-Tex. This is the same sh*t spandex-clad dudes have on their ski boards. No joke.

UltraGlide S
A premium, 7000-grade sintered base reserved for our high-end models. A higher-grade P-Tex means that this base material is equal parts tough as nails and fast as hell.

HyperGlide S
Our standard sintered base. Durable and fast - and even faster when you keep it waxed.

More Tech

Yep, there is more! We stop at nothing to keep improving your snowboarding experience.

CarbonStringers
Carbon is incredibly lightweight and delivers explosive pop, quick edge response, and exceptional dampening at high speeds. By incorporating carbon fiber stringers into the board's construction, we can fine-tune the flex and elevate your ride to the next level. We strategically place carbon stringers in specific areas of the board to fine-tune the feel of each model.

Impact Plates
Additional fiberglass reinforcement surrounding the inserts (under the bindings) provides increased strength and helps to decrease board breakages outside the binding.

HyCap Construction
The best of both worlds. Blending a full cap construction throughout the contact length provides energy and precision, with durable polyurethane sidewalls at the tip and tail for added impact resistance. This results in a lightweight, responsive snowboard that locks into turns with confidence and withstands the abuse of aggressive snowboarding.

StepDown Rails
A thinner sidewall alongside the edge of the snowboard creates a lighter-weight package and allows for a more direct transfer of power between the wood core and your edges.

FlexWalls™
We've replaced classic ABS sidewalls with poured - in urethane (yes, the same material used for skateboard wheels) for stronger adhesion and better durability - plus a smoother, vibration-dampened feel underfoot.

FlexTail
A strategically placed strip of urethane embedded in the wood core allows the tail to flex torsionally in a unique way. This design mimics the dynamics of a swallow tail, offering enhanced maneuverability and control, but with a more freestyle-oriented tail shape.

Powder Hull
If it works on a boat, it should work on a board! By adding a "hull" to the tail of the Surfer snowboard, we've facilitated displacement of snow and improved the snowboard's ability to plane on top of the soft stuff.

Backseat Inserts
An additional insert pack designed to allow you to set your stance back for enhanced float during those deeper days.

NEW! MultiSync™ Sidecut
Bataleon's new MultiSync™ sidecut seamlessly blends multiple radii, designed to optimize the shape of your turn and improve edge grip, response, and control in all conditions.

Next Level Design

We set out with a straightforward mission - redefine what a snowboard boot can be. By combining the most cutting-edge materials, technologies, and innovative construction methods, we're creating the boots we've always wanted to ride but could never find - until now.

First Class Fit

Always striving to be better. We've fine-tuned our fit and material selection to provide the best possible on-hill experience.

BOA® Fit System

We're proudly partnered with the industry leader in snowboard boot Fit Systems.

H5
Premium and modern user interface. The NEW BOA® H5 Coiler features multi-directional functionality and a mirrored interface. This configuration is intuitive, precise, and allows the rider to micro-adjust their fit on the fly.

M+2
Ideal for closure to either the instep or the lower zone of a boot, M+2 provides strength and power using a single active lace and increased dial diameter.

TX3 BOA® Lacing
The best of both worlds. TX3 is a flexible and low-friction textile lace used in high-power boots to provide a soft, modern design aesthetic with lasting durability and strength.

Articulated Cuff
Articulation at the 45° of the boot allows the upper and lower portions of the boot to react independently, reducing shell distortion when flexing forward into the tongue.

P1 Performance Liner

P1 PerformanceLiner
This liner features a three-point lace system and ergonomic paneling for optimal comfort and performance. The flexible Toehugger section ensures the boots adapt comfortably to a variety of foot shapes.

P2 Premium Liner

P2 PremiumLiner
This laceless, heat-moldable liner features a secure double Velcro closure and ergonomic paneling for next-level comfort. Since no two feet are the same, the molded ankle zone and ToeHugger sections adapt to a wide range of foot shapes.

D1 Deluxe Liner

D1 DeluxeLiner
At the high-end of our boot lineup, you'll find the best liner money can buy. It includes all the features of our P2 Premium Liner, plus 3D-molded ankle support, an EVA sole for added cushioning and insulation, and a triple-density insole with extra heel padding for maximum comfort.

Power Steering

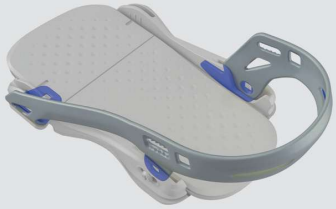

Most Bataleon bindings are based on our Hybrid Chassis. We blend an Aluminum frame with a composite base to create the most dynamically flexing binding possible, putting you in complete control.

HeelWrap™

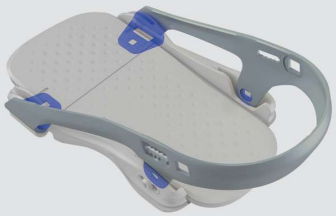

For next-level board control with a lightweight, minimalist design, we'd recommend our HeelWrap™ chassis. The aluminum is reduced to the essentials, giving you control where you need it most.

AsymWrap™

The aluminum UnderWrap construction, with three connection points to the base, provides strong leverage as you press down on your heel, automatically lifting your toes while allowing maximum flexibility for tweaks.

FullWrap™

Built for maximum response and aggressive toe-to-heel power transfer. The aluminum Under-Wrap construction, with four connection points to the base, provides powerful leverage, automatically lifting your toes as you press down on your heel.

Direct Connection

Our all-new MonoFrame™ Chassis provides riders with a direct connection to their snowboard. The magic is in the design. A one-piece chassis provides consistent flex and feel while riding, and we've added fiberglass to increase responsiveness.

New

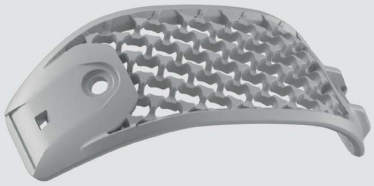

Minimalist and no-nonsense - the ALL-NEW MonoFrame Chassis provides outstanding control, allows your board to flex naturally, and creates a comfortable connection between you and your snowboard.

Perfect Fit

The most comfortable straps ever designed. Packed full of sensible technology, our binding collection features fully adjustable chassis, highbacks, straps, and ankle-straps built to let you dial in a perfect fit, no matter which boot you're riding in.

AuxTech®

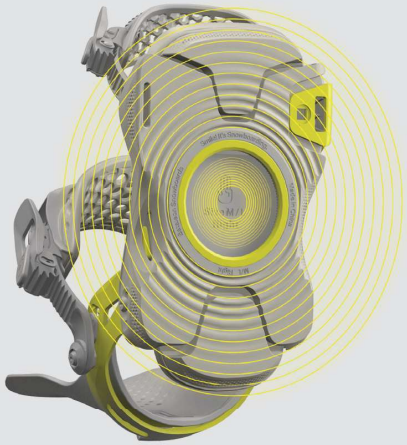

Auxetic Shape Technology features hinged patterns that expand seamlessly around your boot without stretching or distorting the material. This eliminates pressure points and delivers exceptional support and comfort.

KinkLadders™

KinkLadders™ let you customize the feel of your binding by adjusting the AnkleStrap connection. Choose the low position for more flexibility and tweakability, or the high position for locked - in support and increased response.

3D Flex

The smallest possible binding footprint, with the least amount of hard plastic touching the board, allows your snowboard to ride the way it was engineered. Bataleon bindings allow the snowboard to perform all its dynamic characteristics without restriction or distortion. Ride your board, not your binding!

Never Miss a Day®

We never want you to miss a day of riding. If you ride hard, there's always a chance something could break or wear out. Don't worry - we've got you covered. Bindings with the "Never Miss a Day" feature come with a backup parts kit, including extra ladders, screws, and washers, so you can keep riding while sorting out replacements.
