Duotone 2026

True Windsurfing

WHAT'S NEW SAILS

The Super_Hero got upgraded and replaced by the Super_Hero SLS.

The most obvious improvement is a radical weight reduction of 450g. This means that the SLS version is now as light as the Super_Hero D/LAB. We have achieved this by using a similar material composition as on the Super_Hero D/LAB incorporating CARBON XPLY in the high tension tack- and head areas as well as on batten pockets 2 and 3.

But most importantly we have achieved this super light weight WITHOUT using an ultra-thin XPLY laminate on the main panel above the boom.

Compared to any other ultralight wave sail out there this results in 2 crucial advantages:

- × Lab and on water tests confirm that the puncture- and UV-resistance depend only on the film thickness. That's why we are the only brand to offer an extended 5 YEAR WARRANTY on both our wave sails.
- × Lab and on water tests confirm that the overall stretch depends mainly on the film thickness. Ok, you can compensate for some of this by increasing the thread/yarn density. But the space in-between the threads will always stretch.

This is the reason why Super_Hero SLS and D/LAB have the biggest wind range of all wave sails out there!

With the Super_Hero D/LAB, Super_Hero SLS and Duke SLS we now offer 3 real wave sails. Here are the differences:

SUPER_HERO SLS VS. SUPER_HERO D/LAB

- × The Super_Hero SLS has the same physical weight than the Super_Hero D/LAB
- × The Super_Hero D/LAB has an even wider high-wind range than the Super_Hero SLS. The secret of this insane wind range of the lays in
 - A. FUSED CONSTRUCTION
 - B. Increased use of CARBON XPLY
 - C. 4mil center panel which allows for an even straighter luff curve

(note: all other brands are trying to do this but can't since they all use 2mil center panels)

SUPER_HERO D/LAB VS. DUKE SLS

- × Both sails have this unique and very similar crisp feeling
- × On the Duke SLS this is achieved through the additional 5th batten and CARBON XPLY in the high load areas
- × Despite one batten less on the Super_Hero D/LAB we achieve the same crispness through a higher CARBON XPLY content and the FUSED MONOCOQUE BODY CONSTRUCTION
- × Thanks to the 4 battens though the Super_Hero D/LAB has an even lighter physical- & sailing weight

WHAT'S NEW BOARDS

D/LAB next level › D/LAB CUSTOMIZED

CUSTOMIZED

Individual color schemes and a unique serial number make it your personal dream board.

FULL CUSTOM D/LAB TECHNOLOGY

CNC shaped using our most high-end layup and entirely handcrafted, identical to high-end custom made boards for an unmatched weight-durability ratio.

PROVEN & TESTED SHAPES

Proven and tested shapes from the brand with the longest experience in windsurf board design. Because just one mm or a fin/masttrack position not 100% matching with the shape can turn a magic board into an under-performer.

Brand-new and unique

AI_BOARD_3D DESIGN SOFTWARE

In contrast to the industry-standard Shape3d program, our own exclusive 3D CAD software is based on math data-driven input. This allows us to cross-check the outcome using artificial intelligence to ensure maximum precision. Apart from being much more accurate and faster, complex 3D design tasks such as our ground-breaking SYNCED CURVES CONCEPT would otherwise have been simply impossible to realize.

PRODUCTION FOCUSED DEVELOPMENT

Every single prototype is made in our exclusive factory using the exact same process and materials as the production boards. This way, each prototype has exactly the same weight and flex and therefore feels identical to the board you get.

EXCLUSIVE BOARD PRODUCTION

Now all our boards are CNC shaped in our exclusive factory to guarantee superior weight vs. strength ratio, quality and accuracy.

EXCLUSIVE FIN PRODUCTION

All our fins are produced in our exclusive factory now. Instead of using one technology for all our fins we are using 3 different technologies according to the fin length and range of use.

+6 WARRANTY

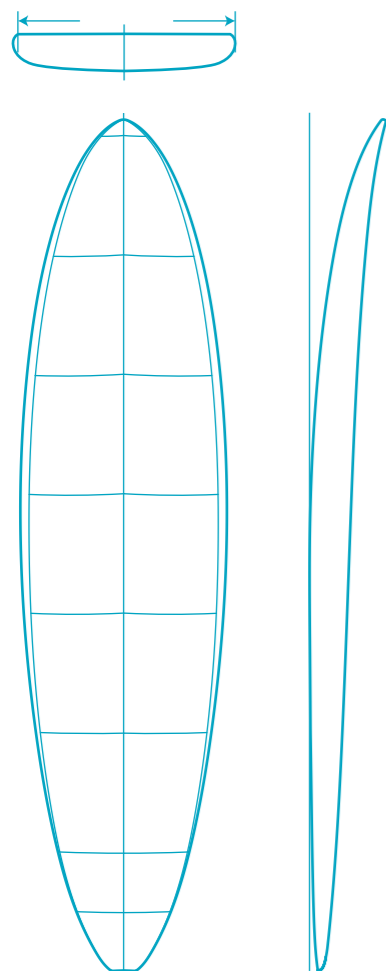

Unrivaled extended warranty of 6 months after registration

All new shapes for Grip 3 and Ultra Grip coming with some never seen before shaping features

SYNCED CURVES CONCEPT

Outline, rocker and rail shape are the 3 key elements that determine how a board feels and performs. To prevent the 3 curves from working "against" each other, the highest priority is to synchronize the degrees of these curvatures. Means that in zones with an increased rocker curve, the outline curve is also increased plus the rails have an increased curvature and vice versa.

To our knowledge this complex 3D task can only be performed by our own AI_BOARD_3D software. Testing this concept on existing boards the improvements to each board were so overwhelming that we incorporated this design feature into all 2026 boards.

ROCKER LINE

3-STAGE ROCKER

Unlike the usual continuous rocker curve, our entire shape concept is based on a segmented rocker line. This accounts for the fact that the top- and bottom turn are two entirely different maneuvers. While you initiate the bottom turn more over your front foot (depending on the size of the wave) the top turn is only sailed over the back foot. This change in posture is the biggest challenge, especially when learning to wave ride – which becomes much easier with our 3-STAGE ROCKER.

OUTLINE

STABLE YET RADICAL CONCEPT

Our wave boards are approx. 1-2cm wider than most other boards.

- × The increased width results in a more stable platform. This makes our wave boards as stable as a 5 liter bigger board while drifting/ floating and going over white water.
- × Most importantly the additional width leads to an increased outline curve. This improves the maneuverability which makes the board turn as radical as a 5 liter smaller board.

The result is an unbeatable broad range of use.

Full Custom Technology Levels

FULL CUSTOM D/LAB

(USED ON ALL D/LAB BOARDS)

- × For these boards we use our most high-tech raw materials (Carbon, Innegra/ Kevlar) resulting in the lowest possible weights, crispest ride sensation and maximum dent-resistance.

FULL CUSTOM SLS

(USED ON ALL 2026 SLS BOARDS)

- × The SLS construction uses a lower Carbon content and the Innegra is replaced by our exclusive S_GLASS+. This results in a more attractive price level.
- × These boards are approx. 300g heavier than the D/LAB boards.
- × Due to the FULL CUSTOM CONSTRUCTION the SLS boards are stronger and lighter than comparable boards made in the usual semi custom construction.

FULL CUSTOM PVC-WOOD

(USED ON ULTRA GRIP, ULTRA FREEWAVE)

- × Our most price attractive boards made in FULL CUSTOM CONSTRUCTION. These boards feature wood reinforcements that effectively dampen peak loads.

Ultra Grip D/LAB

Focus Ground Swell x Windy Euro Waves

What's new

Full Custom D/LAB Technology

The Full Custom D/LAB Technology is one hundred percent identical to the most high-end custom made boards.

Focussed World Cup Wave Designs

The ULTRA GRIP is designed to work all around the globe with focus on groundswell up to windy Euro wave conditions.

AI_Board_3D

We use our own exclusive 3D CAD software. Apart from being much more accurate and faster, complex 3D design tasks such as our ground-breaking SYNCED CURVES CONCEPT would otherwise have been simply impossible to realize.

Sizes:

53 | 61 | 69 | 76 | 82 | 88 | 94 | 106

Launch:

July 2025

Exclusive Board Production

All our boards are CNC shaped now in our exclusive factory to guarantee superior weight vs. strength ratio, quality and accuracy.

Plug & Shred

Mini mast-track and fin-boxes > approx. 200g weight saving plus no more guessing the right trim or even destroying the performance.

Exclusive Fin Production

All our fins are produced in our exclusive factory now. Instead of using one technology for all our fins we are using 3 different technologies according to the fin length and range of use.

Shape follows construction

Rather than simply using the same 3D shape for all sails in each construction, each sail is completely re-engineered and designed from scratch. This is the only way we could exploit the full potential of the zero-stretch CARBON XPLY or the FUSION BODY CONSTRUCTION. This makes all SLS and especially D/LAB sails real game-changers.

C12: Turquoise/White

C11: Violet/White

C05: White/Violet

Super Hero D/LAB

World Cup Wave

What's new

Intelligent CARBON XPLY Construction D/LAB

CARBON XPLY in the high load top, foot and clew area and especially at the batten pockets guarantees unsurpassed low stretch and power transmission. However, the slightly more (re)flexing regular XPLY in the body avoids the power from becoming uncontrollable.

Monocoque Fusion Body Construction

No more stitched body panels > 150-200g weight saving > "play" between the panels is eliminated > fused connection even stronger than any monofilm or XPLY material > biggest wind range ever in a wave sail.

Sizes:

3.7 | 4.0 | 4.2 | 4.5 | 4.7 | 5.0 | 5.3 | 5.7

Launch:

August 2025

Lowest Sailing Weight

There is no sail that feels lighter in your hands than the Super_Hero D/LAB! Further details please find below under sailing weight.

XPLY Plus

Laminate (100/150 micron) with the lowest stretch and best UV- and puncture resistance on the market.

Adapted Draft Position

Individual draft location based on sail size to give maximum control and wind range.

Super-Light Bumper

The lightest protector on the market, with integrated downhaul trim indicator slot.

Duotone Service

At Duotone Windsurfing, customer service is at the core of everything we do. We value our customers above all else and strive to provide them with exceptional support and assistance every step of the way. As part of our commitment to serving you better, we are excited to announce new service options like the launch of our helpcenter, dedicated to enhancing your experience with us.

Duotone Repair Shop

Join us in our mission to promote sustainability and extend the lifespan of our products! As a leading brand in the water sports sector world wide, we're proud to introduce our Repair Shop Finder.

Committed to minimizing waste, we're offering repair services for damaged items instead of discarding them. As part of our initiative, selected shops will host repair services where you can bring your damaged gear for expert repair. Take responsibility for prolonging the lifecycle of your products by choosing your nearest repair location.

This new "helpcenter" and an extended FAQ section are designed to offer you comprehensive guidance and information, ensuring that you have all the resources you need to make the most of your windsurfing adventures. Whether you're a distribution, shop, seasoned pro or just starting out, our goal is to empower you with the knowledge and tools to maximize your enjoyment on the water.

At Duotone Windsurfing, we believe that customer satisfaction is paramount, and we are continually striving to innovate and improve our services to better meet your needs. We invite you to explore our service options and take advantage of the wealth of resources available to you. Thank you for choosing Duotone Windsurfing – where your windsurfing experience is our top priority.

Duotone Pro Center

Experience the World of Duotone

We invite you to join us at our Duotone Pro Centers for an unforgettable kitesurfing experience, equipped with the best gear and supported by amazing teams dedicated to helping you make the most of your time on the water. Explore our stunning locations and discover the thrill of kitesurfing like never before!

Exciting Updates from Duotone Pro Centers!

At Duotone Pro Centers, we're committed to providing you with the best windsurfing experience possible, backed by outstanding service, safety and the highest quality Duotone materials. All centers are located at some of the most stunning windsurfing spots in the world, ready to cater to your adventurous spirit!

Here's an overview of the latest developments:

DPC Dakhla: This central project currently features three centers, with plans to expand to four. All centers are located in close proximity to each other, fostering cross-sport networking. Dakhla serves as a particularly strategic hub for windsurfing enthusiasts from all over Europe. More and more direct flights from main European cities will follow.

Existing DPC Expansions:

DPC Mykonos: The adjacent Kite Mykonos Village will be officially integrated into the DPC, significantly enhancing the accommodation offerings available to our guests.

DPC Limnos: The station has acquired surrounding land, paving the way for a future transition from a mobile to a permanent infrastructure in the coming years.

For more information and the overview of all centers, please check out the webpage!

Upcoming centers:

- + DPC Dakhla

1% for the Planet & Viva con Agua – Our Commitment to Nature

At Boards & More, we believe our passion for watersports and cycling goes hand in hand with protecting nature. That's why we've joined 1% for the Planet, donating 1% of our online revenue to environmental and social projects worldwide.

1% for the Planet is a global movement that advocates for the protection of the Earth as well as social justice to ensure a sustainable future for generations to come.

Through our partnership with Viva con Agua, we support the global vision of Water for All. Our annual donation funds two key projects in Cape Town, including the WASH Bus, a mobile unit offering showers and hygiene education to people in need.

These efforts reflect the values of our Save Our Playgrounds program – because preserving oceans, beaches, and mountains means safeguarding our playgrounds for future generations.

Let's ride the wave of change – together.
